New and improved products in the FIBRO Standard Parts catalogue 2017

2131.30.
Eyebolt
C25

2131.31.
Attachment point screwable profilift gamma
C26

2131.32.
Attachment point screwable profilift gamma ring nut
C27

2131.33.
Load block, turnable on all sides
C28

2131.34.
Attachment point screwable profilift delta
C29

2131.35.
Triple vortice ring
C30

2131.36.
Double vortice hook
C31

2131.37.
Double vortex ring
C32

2131.38.
Double vortex ring + centring device
C33

2131.39.
Double vortex ring with internal thread
C34

2131.40.
Double vortex ring screw
C35

2131.41.
Double vortex ring screw + centring device
C36

2131.42.
Double vortex ring screw Mega DSS
C37

2131.43.
Double vortex ring with internal thread
C38

2131.50.
Attachment point screwable profilift eta
C39

2133.11.
062.36
Lifting flange with bolt
2133.11.
00.15.062.36
Lifting bolt
C40

2133.11.10.
Lifting flange with bolt with safety ring, to AUDI
C41

2133.15.
Lifting flange with bolt with safety ring, with feather key, to BMW
C45

2192.10.
Hexagon socket head cap screw
C60

2446.10.55.
Pressure bolt with base, acc. to VW
D263

2446.11.55.
Air pin, acc. to VW
D264

2443.14.55.
Position monitor for boards
D287

2443.14.00.
60.18.044
Inductive proximity switch
D288

2443.14.00.
60.23.
Cable
D289

2206.
Punch with tapered head, blanc
E32

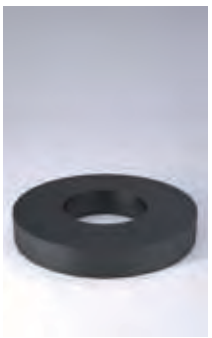
2216.
Punch with tapered head, stepped, round
E33

2706.
Punch with tapered head, blanc, with ejector pin
E34

2716.
Punch with tapered head, stepped, round, with ejector pin
E35

241.13.
High performance compression spring, XSF
F28

241.19.
High performance compression spring, 3XLF
F60



244.10.
Washer
F81-82

2452.10.
Slide stop
F90

2452.10. .2
Damping unit, TUBUS TA
F97

244.16.
Spring and spacer unit
F104

244.18.
Spring and spacer unit
F105

2470.20. .1
Spring plunger, low maintenance, standard spring force
F117

2470.20. .3
Spring plunger, low maintenance, medium spring force
F119

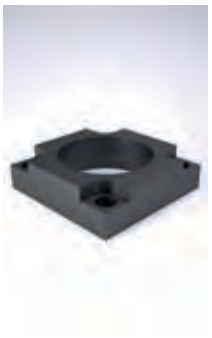
2470.20. .2
Spring plunger, low maintenance, high spring force
F121

2478.20. 15.24.
Holding sleeve for lifter units to BMW
F154

2478.20. 15.40.
Universal lifter unit, acc. to BMW
F156

2478.25. 00090.
Lifter unit with pillar guidance
F158

2478.25. 00200.
Lifter unit with pillar guidance
F159



2480.064. 00500.
Flange
F214

2488.13. 00750.
Gas spring HEAVy DUTy

A Die Sets

Cast iron, steel and aluminium die set press units
Lamination die set units, tooling pallet die sets

PDF DOWNLOAD

B Precision Ground Plates and Flat Bars

Steel and aluminium plates, flat and square tool steels
Precision feeler gauges, foil shims

PDF DOWNLOAD

C Lifting and Clamping Devices

Shanks, lifter studs, eyebolts
Clamping claws, screws and bolts

PDF DOWNLOAD

D Guide elements

Pillars, bushes, mounting flanges, ball cages, oilless guide elements

PDF DOWNLOAD

E Ground Precision Components

Punches and matrixes, Pins, gauge pins

PDF DOWNLOAD

F Springs

Compression springs, gas springs, elastomer springs
Spring and spacer units

PDF DOWNLOAD

G Elastomer-Bars, -Sheets, -Sections

FIBROFLEX® and FIBROELAST®-sheets and -profiles

PDF DOWNLOAD

H FIBRO Chemical Tooling Aids

Tooling resin, metal adhesives, oils ang greases

PDF DOWNLOAD

J Peripheral Equipment

for presses, tool manufacture, assembly aids
Conveyor belts, pneumatic conveyors, electric conveyors

PDF DOWNLOAD

K Cam Units

Flex cam, cam slide units, roller slide units

PDF DOWNLOAD

L Standard Parts for Mould Making

PDF DOWNLOAD

Hassmersheim plant

FIBRO
YOUR PRODUCTION PARTNER

FIBRO – an internationally successful company.
As a market leader in Standard Parts, Rotary Indexing Tables and Automation, FIBRO provides products and solutions to ensure your production keeps moving.
So what is the secret of the FIBRO success? Products developed in-house, tailor-made for the market with uncompromising quality.

But good products are not enough on their own.
FIBRO combines excellent products, the know-how and service competence of an internationally focused company, matched to the actual needs of customers - wherever they are.

FIBRO IS CUSTOMER-FOCUSED – WORLD-WIDE.

A well-developed network of sales and service points and strategic partners ensure that help is always at hand. This ensures technical advance, world-wide experience in applications and rapid availability of products.

Facts and figures on FIBRO:

- Founded 1958
- Approx. 850 employees
- Branch offices in France, Poland, the USA, India, Singapore, Korea and China
- Over 70 representatives and service partners worldwide
- A quality management system in line with ISO 9001
- An environmental management system in line with ISO 14001

FIBRO
INNOVATION FROM TRADITION

STANDARD PARTS

Today the Standard Parts Division operates from the Hassmersheim and Weinsberg works, which manufacture a comprehensive range of standard parts and maintain stocks ready for immediate despatch world-wide.
The machine tool, mechanical engineering and systems engineering product ranges have been developed to meet the needs of customers.

They include steel die sets, guide elements, oilless guide elements and precision components such as punches and matrixes, special steel compression springs, gas springs, forming materials, metal bonding agents, moulding resins, peripheral equipment for pressing and tool making, tool slides with cam or roller slides and hydraulic cam systems.
FIBRO has become renowned world-wide for its comprehensive range of products in stock and its readiness to deliver.

ROTARY TABLES

FIBRO – The worldwide pioneer in the field of rotary tables

A comprehensive range of types:
FIBROTAKT® – Rotary indexing table with Hirth face gear
FIBROPLAN® – NC rotary table with worm drive
FIBRODYN® – NC rotary table with direct torque drive
FIBROMAX® – Heavy-duty NC rotary table with Twin Drive
FIBROTOR® – Electromechanical rotary indexing table for applications that do not involve machining

Rotary tables for all applications – from flexible workpiece positioning through rotary and multiple-axis machining to assembly automation
Used in all branches of industry – from the automobile industry through solar energy to machine tools
A wide range of sizes – from micro-machining to processing of very large parts
Customer-oriented design – from the standard modular table to customer-specific special solutions

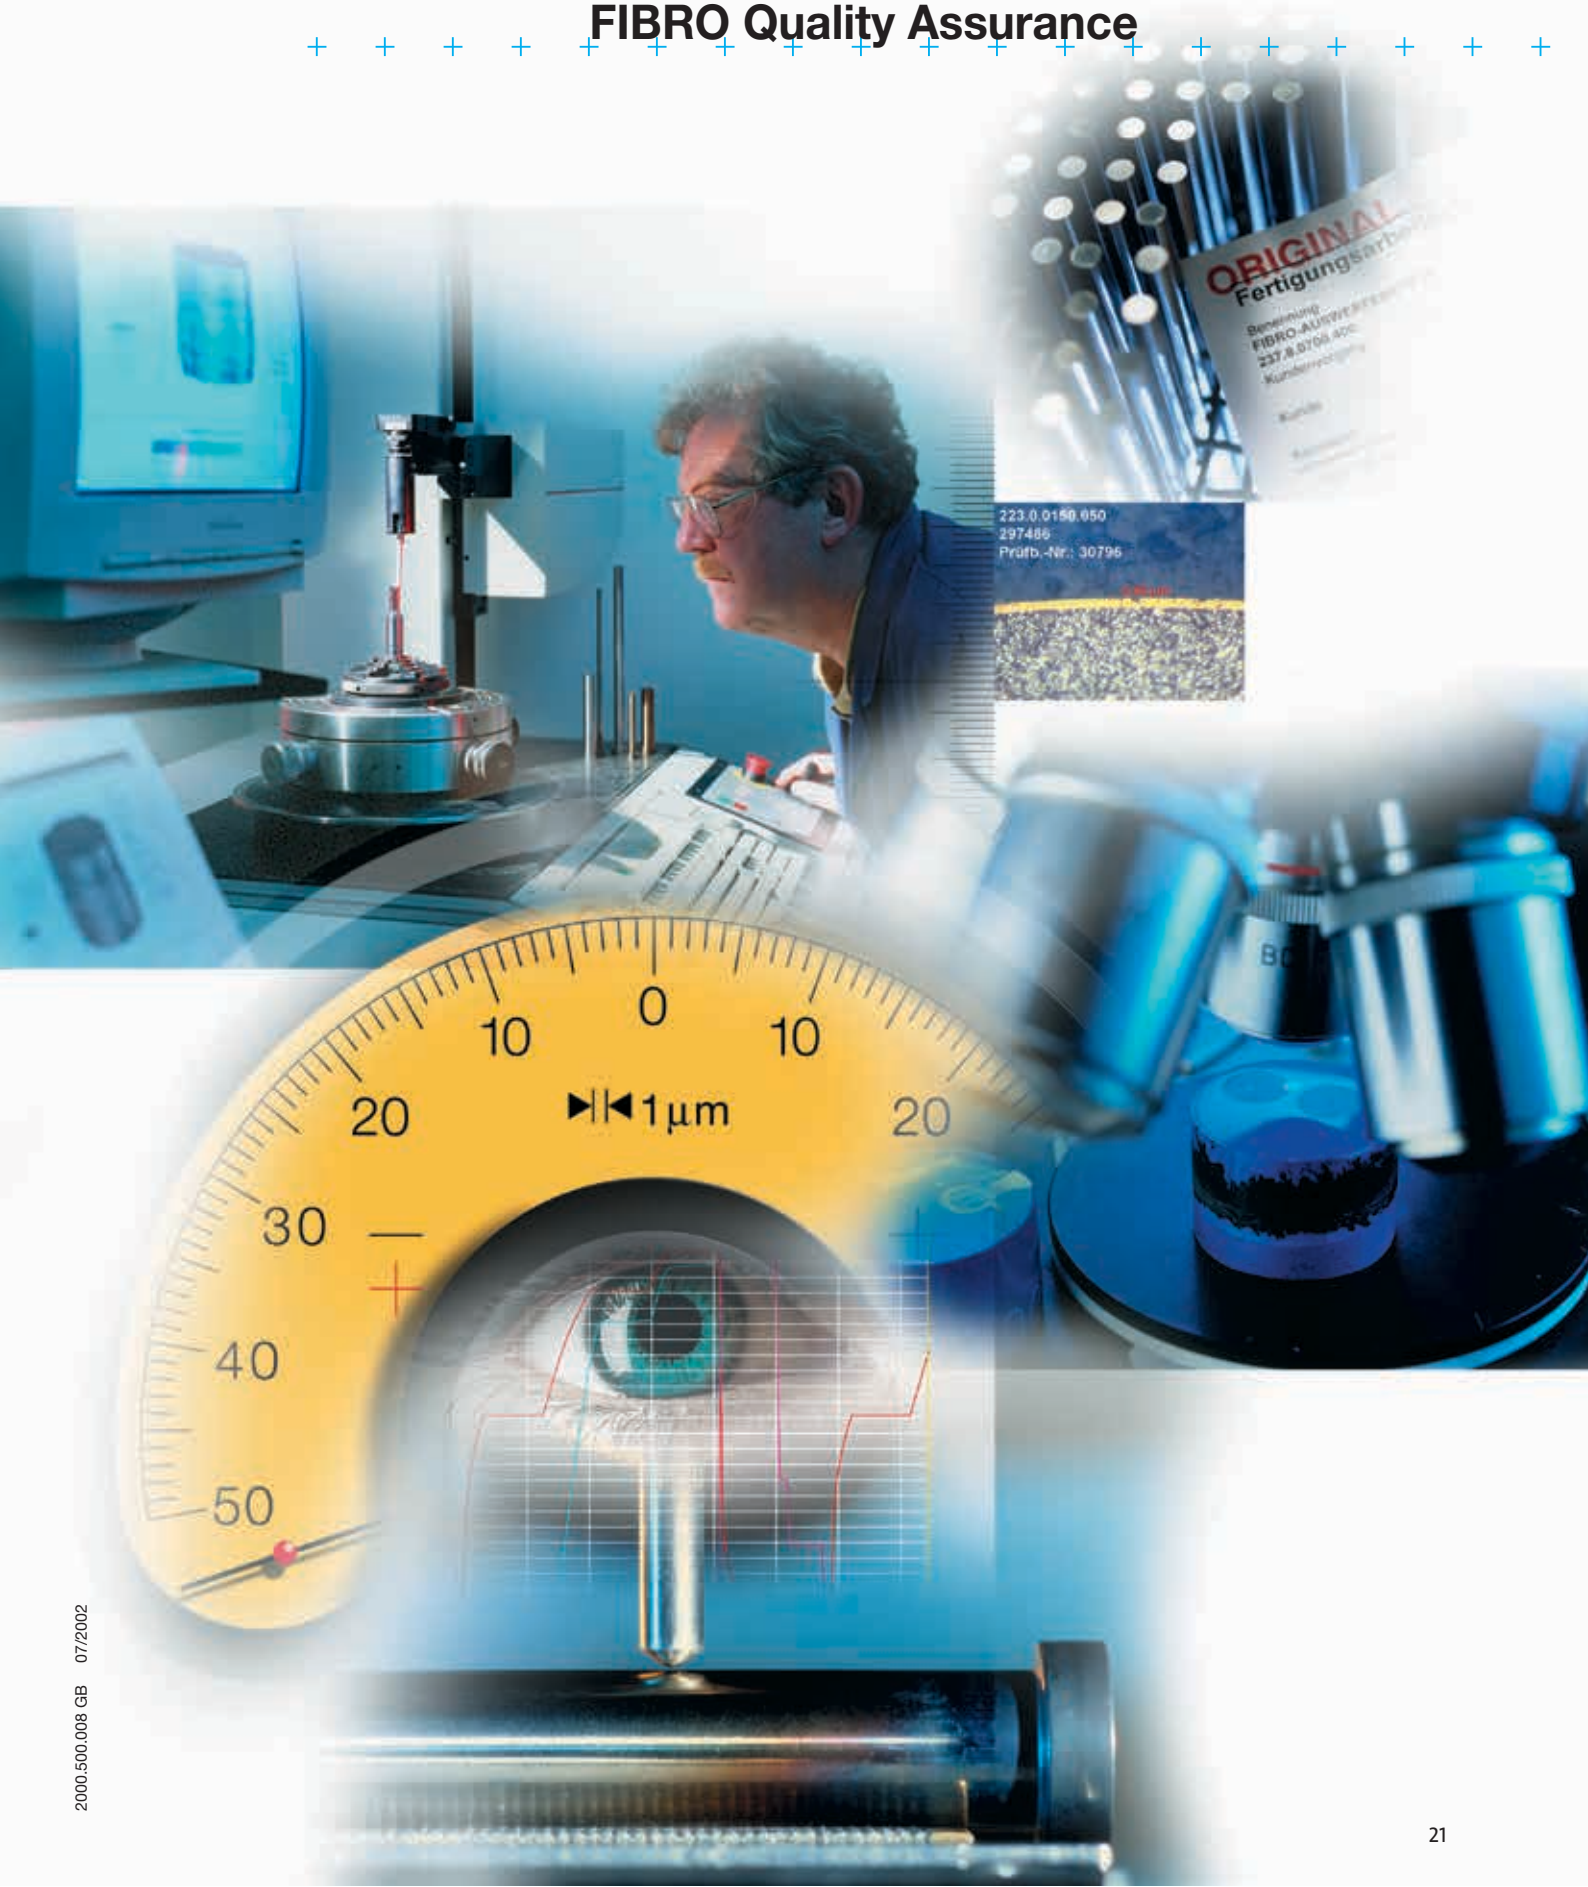
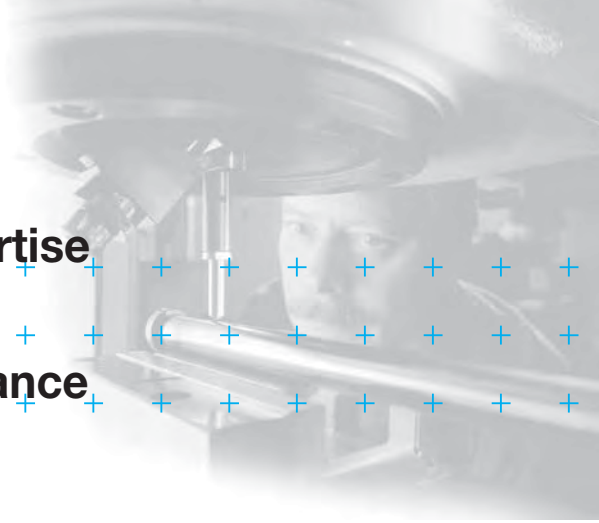
FIBRO

Experience and expertise you can rely on FIBRO Quality Assurance



2000.500.008 GB 07/2002

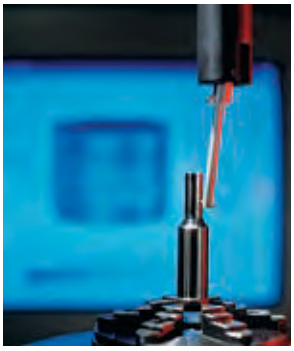
FIBRO



Experience and expertise you can rely on FIBRO Quality Assurance

FIBRO is renowned for its quality world-wide. This high quality is achieved through our dedication and commitment to Quality Assurance.

FIBRO testing starts on the raw material and continues right through production to the completed product. The test facilities themselves are also subject to stringent continuous testing. Only by setting itself such stringent standards can a company support its customers long term in safety, cost-effectiveness and quality.

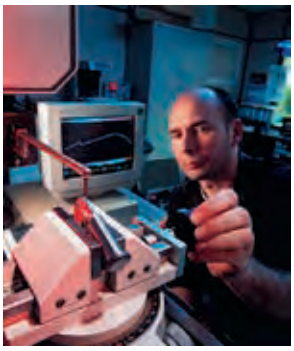


Tests during production

Precision shape and contour testing equipment is used directly in production. This ensures early confirmation of the quality of the product.

The shape testing equipment tests for qualities such as roundness, concentricity, straightness and rectangularity.

FIBRO state of the art technology provides 3D visualisation of concentricity, coaxiality and cylindricity.



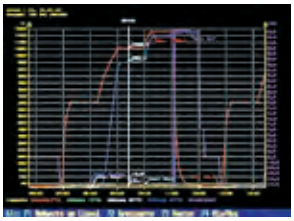
Materials testing - raw materials to specification

The FIBRO laboratories carry out microscopic investigation of the raw materials, including enlargement to 2,500 times natural size.

Spectral analysis determines whether the material is correct in terms of chemical composition.

Hardening – hardness testing

All the process parameters in the hardening process in our own hardening shop are recorded and documented.
Hardness testing is used to monitor the results of the hardening process on every batch.



Final tests

For precision at micro level if certain basic requirements have to be met. It goes without saying that the temperature of the measuring room at FIBRO is kept at 20°C. Here the fine precision FIBRO products are measured after production before being released to the customer.

Cast Iron-, All-Steel- and Aluminium Die Sets

Cast Iron-, All-Steel- and Aluminium Die Sets and Plates Remarks and Guide Lines

Execution

Contour faces of FIBRO Steel Die Sets are fully machined. Contour faces of Aluminium Die Sets are sawn, as are those of Aluminium Plates. However, these contour faces can also be machined on request. To all die set plates, a general thickness tolerance of ± 2 mm applies.

Guide Elements

Guide pillars DIN 9825/ISO 9182 (209.19.) and headed guide bushes DIN 9831/ISO 9448 (2081.) are normal equipment on all-steel die sets.
Detailed information under Guide Elements.

Lifting Aids on Die Sets

Plate sizes with edges a1+b1 ^ 1000 mm, and die sets weighting more than 100 kg, are fitted with threaded holes for two lifter eyebolts per plate. Eyebolts etc. are supplied against special order.

Special Die Sets and Plates to Customers' Drawings

Die sets and plates up to size 22003 1100 mm (external dims.) will be made to customer's drawings, with any special features and highest precision.

Special Machining Features

Wherever possible, all larger apertures or holes should be done by FIBRO before final machining of die sets, for their application at the customer's works must result in die set distortion and impairment of accuracy.

Enquiry Forms for Special Die Sets

Special pre-printed forms for enquiries and ordering are available on request. All the customer has to do is the filling-in of dimensions and the specifying of guide elements or special machining features where applicable.

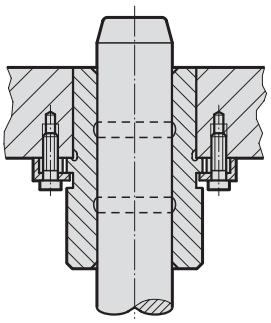
Notes on Guide Elements

FIBRO Precision Sliding Guides – Carbonitrided Sintered Ferrite Bushes



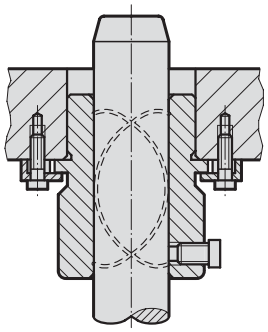
These guides employ bushes made from sintered ferrite of high purity with carbonitrided surface. Bearing surfaces are fine-ground.

The sintered ferrite has a porosity content of 18-20 % by volume, vacuum filled with special lubricant FIBROLIT LD. As additional long term lubrication it is recommended to fill up the grove in the bushing with FIBROLIT LD 280.34, see chapter H. Even under arduous running conditions, this material can be relied upon for good protection against oil film rupture.

Under no circumstances must molybdenum disulfite be added to the lubricant.

For bearing clearance ranges, see chapter D.

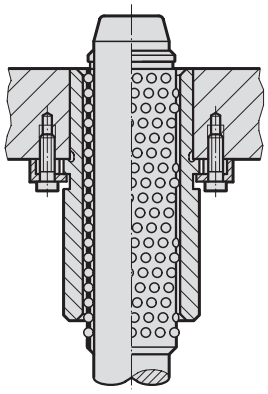
FIBRO Precision Sliding Guides, bronze-coated



consists of a steel body with bronze-coated running surface with helical oil groove and a grease nipple for lubrication.

The steel body guarantees excellent resistance to breaking, even when subject to high loading at the edges.

FIBRO High Precision Ball Bearing Guides



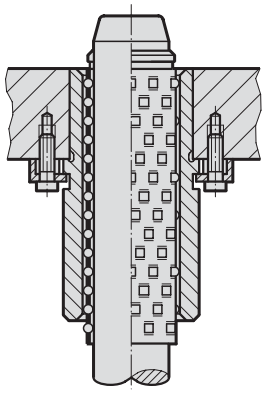
Careful manufacture at narrowest tolerances, and exactly the right amount of preloading* result in a play-free guide element of exceptional performance potential.
Our superfinished running surfaces further enhance the advantages of ball bearing guides.
Toolmakers favour ball bearing buides because of their free movement on the bench.

FIBRO ball bearing guides can be equipped with a choice of brass or aluminium ball cages, which have proved to be very successful in practice due to their ball density and stability

Ball bearing guides with their point contact of the balls remain somewhat sensitive to shock and sustained radial loads. To some extent, generous dimensioning of pillar diameters helps to compensate for this inherent disadvantage.

* Average preloading:
4 µm on pillars from 8 to 12 mm diameter
7– 9 µm on pillars from 15 to 16 mm diameter
9–11 µm on pillars from 18 to 42 mm diameter
11–13 µm on pillars from 50 to 80 mm diameter

FIBRO Precision Roller Guides



The profile roller cages are in linear contact with the guide bushing and guide pillar. This feature offers much greater capacity for radial loads in the individual roller than an identical size of ball bearing.

The caulking of the roller bearing arrangement is implemented with the same FIBRO-specific solution as that used in ball cages.

The profile rollers are arranged in a spiral formation in an axial direction. This gives each profile roller its own path. The roller cages are designed with a recess for a circlip conforming to DIN 471.

The much larger contact area with the ball bearing guide permits a significant reduction in preload values.

The following preload values apply to FIBRO Roller Guides:

For static loads/low velocities, pillar diameters			For Dynamic Loads/High Velocities, pillar diameters		
up to Ø 25	= 2,5	µm	up to Ø 25	= 1,5	µm
Ø 30/32	= 3	µm	Ø 30/32	= 2	µm
Ø 40-50	= 3,5	µm	Ø 40-50	= 2,5	µm
Ø 63	= 4	µm	Ø 63	= 3	µm

Use only pairing class
guide pillar red = .30
guide bush yellow = .10

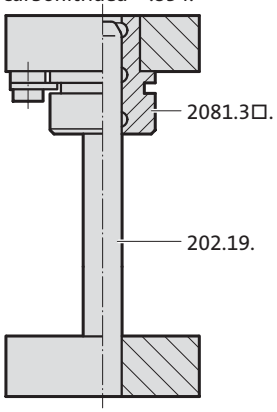
All-Steel- and Aluminium Die Sets

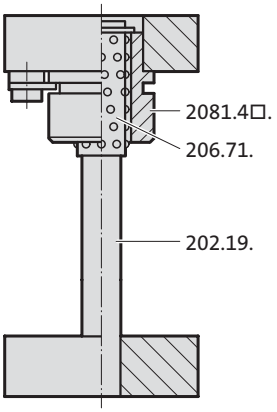
Die set without stripper ~DIN 9868/ISO 11415

Standard Guide Systems

Headed Sintered Ferrite Bushes, carbonitrided = .834.



Headed Ball Bearing Bushes = .862.



Description:

FIBRO Die Sets offer the choice between sintered ferrite sliding guides and those of the ball bearing type to DIN-ISO. Both come with headed guide bushes. These are seated in push-fit bolster bores and retained there by screw clamps.

Execution:

Steel: External contours milled, thickness surfaces ground
a_1 or b_1 ≦630 = +0,2/+0,4
a_1 or b_1 >630 = +0,2/+0,6

Aluminium: External contours sawed, thickness surfaces ground
a_1 or b_1 = +1/+4

Advisory: Ordering Code:

Hole pattern for the screw clamps depends on positioning of working surface, determined by last part of the Order No,

for example: 2010.49.2520.4.862.1 lengthwise
.2 across

Note:

On request, Standard Die Sets can also be fitted with any other FIBRO Guide Elements (see die sets to customers' drawings).
FIBRO will furthermore supply die sets with special machining features.

Die set without stripper ~DIN 9868/ISO 11415

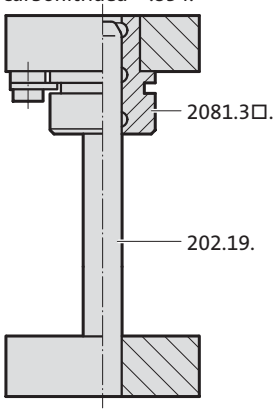
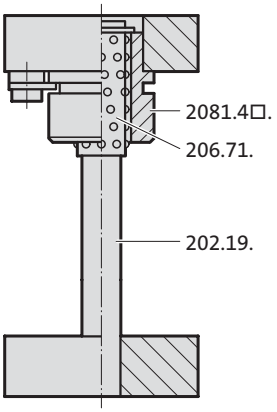
Standard Guide Systems

Headed Sintered Ferrite Bushes, carbonitrided = .834.



Headed Ball Bearing Bushes = .862.



Description:

FIBRO Die Sets offer the choice between sintered ferrite sliding guides and those of the ball bearing type to DIN-ISO. Both come with headed guide bushes. These are seated in push-fit bolster bores and retained there by screw clamps.

Execution:

Steel: External contours milled, thickness surfaces ground
a_1 or b_1 ≦630 = +0,2/+0,4
a_1 or b_1 >630 = +0,2/+0,6

Aluminium: External contours sawed, thickness surfaces ground
a_1 or b_1 = +1/+4

Advisory: Ordering Code:

Hole pattern for the screw clamps depends on positioning of working surface, determined by last part of the Order No,

for example: 2010.49.2520.4.862.1 lengthwise
.2 across

Note:

On request, Standard Die Sets can also be fitted with any other FIBRO Guide Elements (see die sets to customers' drawings).
FIBRO will furthermore supply die sets with special machining features.

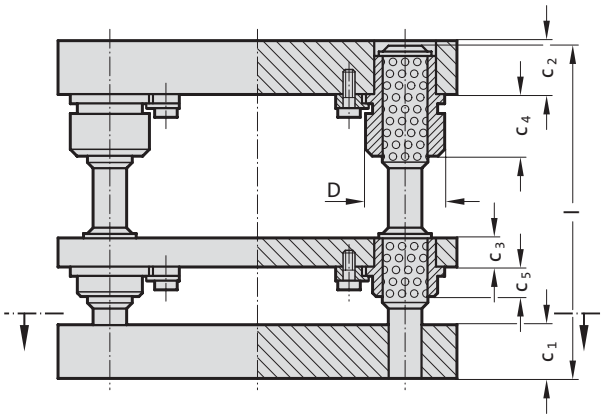
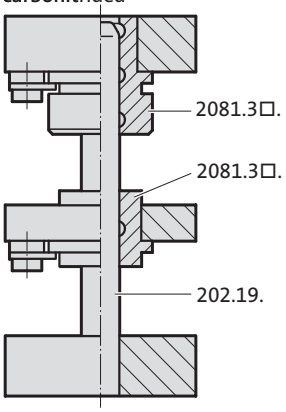
Die set with stripper ~DIN 9868/ISO 11415

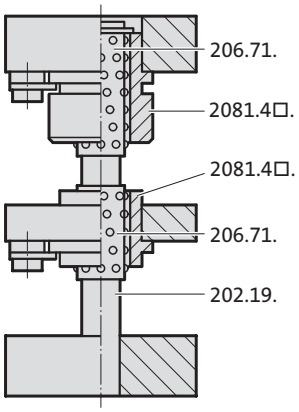


Standard Guid ystems

Headed Sintered Ferrite Bushes, **carbonit**rided



Headed Ball **Bearing**



Description:

FIBRO Die Sets offer the choice between sintered ferrite sliding guides and those of the ball bearing type to DIN-ISO. Both come with headed guide bushes. These are seated in push-fit bolster bores and retained there by screw clamps.

Execution:

Steel: External contours milled, thickness surfaces ground
a_1 or b_1 ≦630 = +0,2/+0,4
a_1 or b_1 >630 = +0,2/+0,6

Aluminium: External contours sawed, thickness surfaces ground
a_1 or b_1 = +1/+4

Advisory: Ordering Code:

Hole pattern for the screw clamps depends on positioning of working surface, determined by last part of the Order No,

for example: 2010.49.2520.4.865.1 lengthwise
.2 across

Note:

On request, Standard Die Sets can also be fitted with any other FIBRO Guide Elements (see die sets to customers' drawings).
FIBRO will furthermore supply die sets with special machining features.

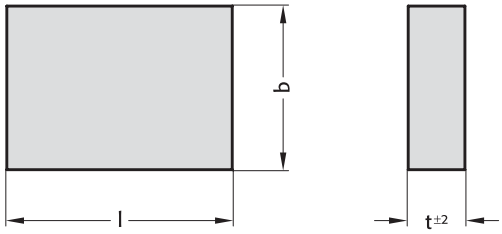
Steel plate ISO 6753-1

2900.



Execution:

External contours milled. Thickness surfaces ground

Note:

l or b ≤ 630 = +0,2 / +0,4

l or b > 630 = +0,2 / +0,6

Plates from 500 × 500 mm on are manufactured with lifting thread.

2900. Steel plate ISO 6753-1

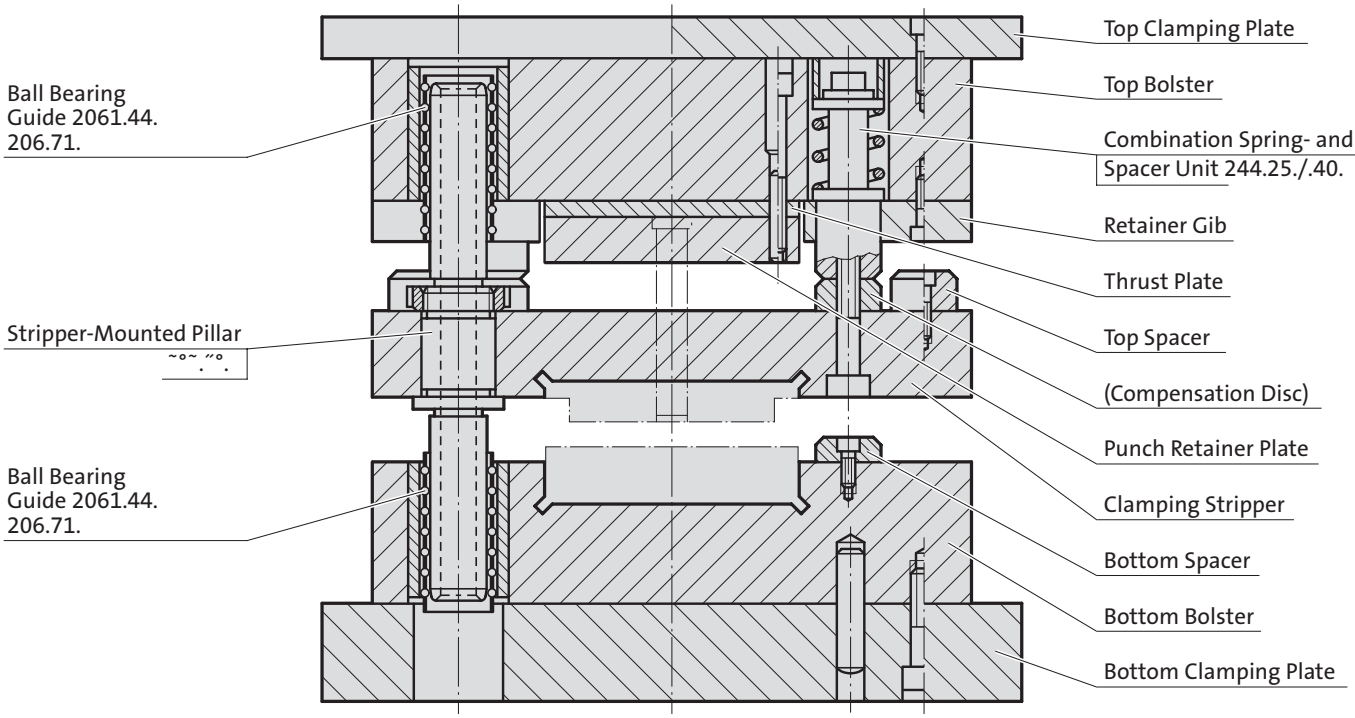
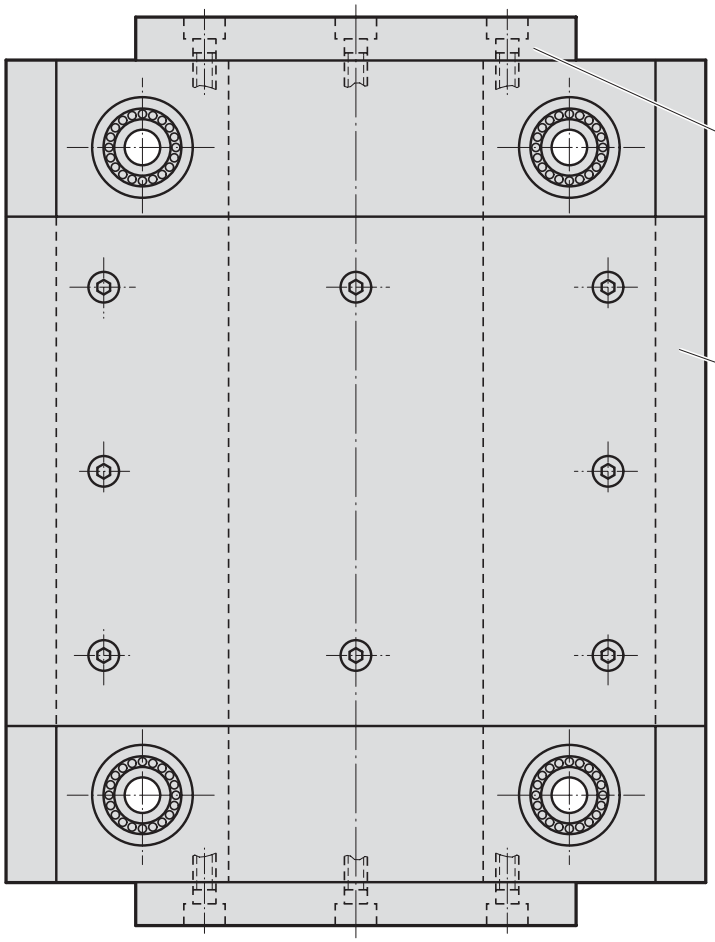
Progression Lamination Die Set Units

Progression Lamination Die Set Unit





Progression lamination die set unit

Die set units for progression/lamination dies

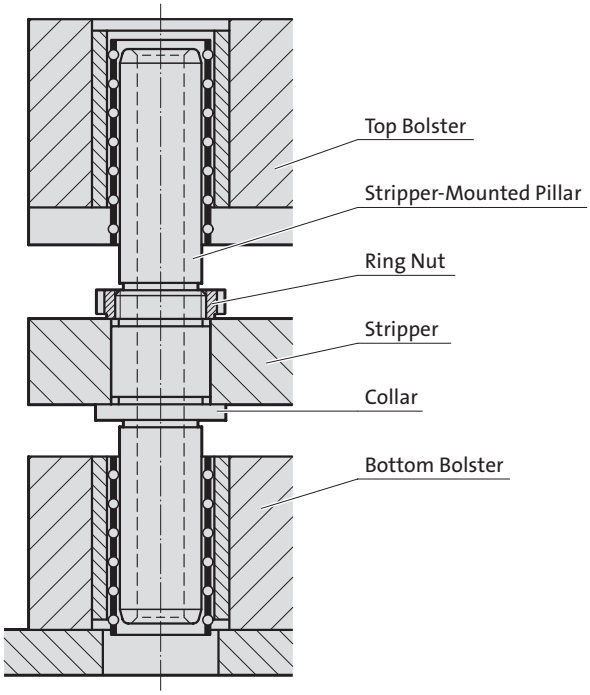
The accuracy of a stamping die starts with the die set! When we designed these new units, special attention was paid to the stability and load capacity of the guide pillars.

The eventual introduction of the stripper-mounted pillar in its present form brought an eightfold increase in transverse load-carrying capacity relative to conventional pillars; under the same radial force, deflection is reduced to one-eigth.

While modern high-speed presses have made ball bearing guides all but mandatory, the limited load capacity of these bearings remains a disadvantage, calling for generous nominal pillar diameters and the use of more than two guide bearings.

Considerable forces of inertia are encountered during the reversal of stroking motion at speeds in excess of 500 SPM. In order to keep these harmful forces to a minimum, FIBRO Stripper-Mounted Pillars are provided with hollow cores.

Considerations such as these formed the basis for the development of our new die set units with stripper-mounted pillars – a concept that has resulted in greatly improved accuracy, overall stability and speed capacity.



Combination spring/spacer units

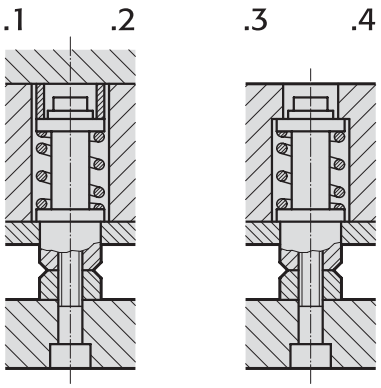
Strippers on FIBRO progression/lamination die set units are laid out for the functions of punch guiding and clamping of the stock, derived from preloaded spring/spacing units of highly compact design.

The advantages of these compact units, in accordance with executions 1 to 4, are as follows:

a) compactness – the combination of both spring- and spacer functions saves die space

b) ease of die maintenance – punch regrinding and replacement, as well as dimensional adaptation, can be done without dismantling of the stripper.
Note: regrinding of punches = regrinding of spacer!

c) ease of springs maintenance – after removal of only the top clamping plate, the complete spring/spacer unit can be taken out for replacement etc. This feature applies to executions 1 and 2 only.



Retaining slots for matrixes and guiding-stripper plate

It is of paramount importance to the accuracy of the final die assembly that both these slots are in perfect vertical alignment, to within a few mm.

From long experience we know that all heavy machining of die set apertures must precede the finish-machining of the two retainer slots for the matrix inserts and the guiding/clamping stripper plate.

Whenever the machining of such apertures is not entrusted to us we will supply our die set units with pre-ground slots only.

Tooling Pallet Die Sets

Fast Exchange System for Pallet Tooling

Description

The fast exchange of pallet-born tooling sets, with the concept of rapid mechanical positioning, meets the demands for:

- lowering of tooling cost
- reduction in setting costs
- faster response to market trends.

Instead of a multitude of complete die set-born press tools, the new system is based on a carrier die set with rapid-exchange features. This die set can remain in the press, while any number of tooling pallet sets can be accommodated expediently and precisely, one at a time.
There are no individual guide elements associated with a tooling pallet set – the necessary guiding remains a function of the carrier die set exclusively.

Tooling pallet sets are mounted to standard carrier plates – the top and bottom tooling simply slides into position, where a stop provides the positioning control, to allow entry of the locating pins upon the required half-turn of each of the four pin actuation levers on the die set. With the tooling pallets now positioned accurately, the hexagonal clamping screws at the front of the die set can be turned with a box spanner, each activating one clamp via an internal cam, moved by threading action of the screw. The cam angle is such that self-locking is obtained.

Press Tool Types

Sets of pallet tooling can be designed as:

- combination progression tools
- compound tools
- draw dies
- bending- and forming dies
- combination tools etc.

Setting and Tryout Aids

The absence of individual guide elements is a fundamental feature of tooling pallet sets which greatly assists the overall economy of the system. In order to facilitate the aligning of top- and bottom tooling, conical centring units can be fitted, thus providing alignment between both members by direct means – even outside the carrier die set, on the toolmaker's bench.

As a further aid for setting and tryout of pallet sets we offer the FIBRO Aligning- and Tryout Press Unit 201.98. with simplified but basically similar positioning- and locking features as the carrier die set.

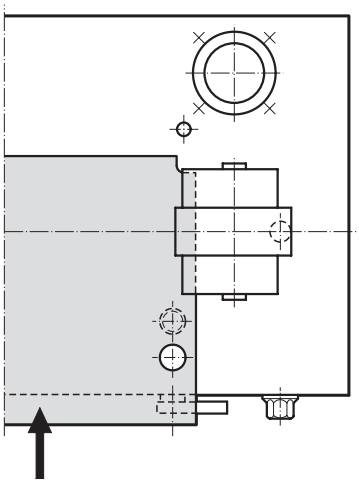
Fast Exchange System for Pallet Tooling

Setting

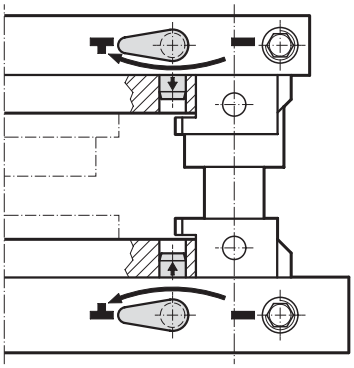
- slide each pallet into its position
- positioning
- clamping

These steps can be completed in a minute.

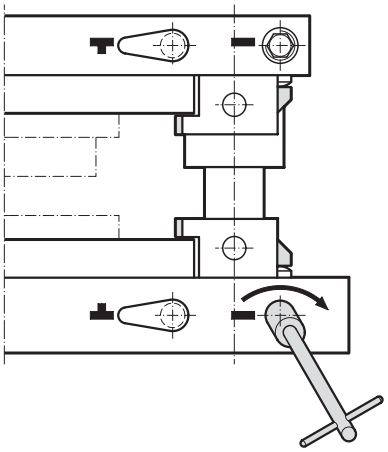
Slide-In Insertion



Positioning

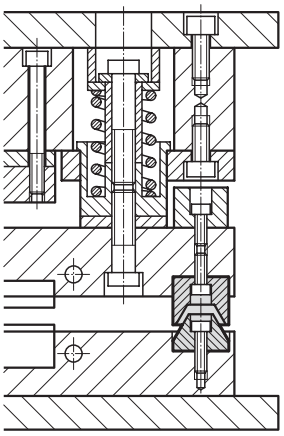


Clamping



Positioning Aids

Pallet tooling sets can be equipped with conical centring units.



Sheet Thicknesses

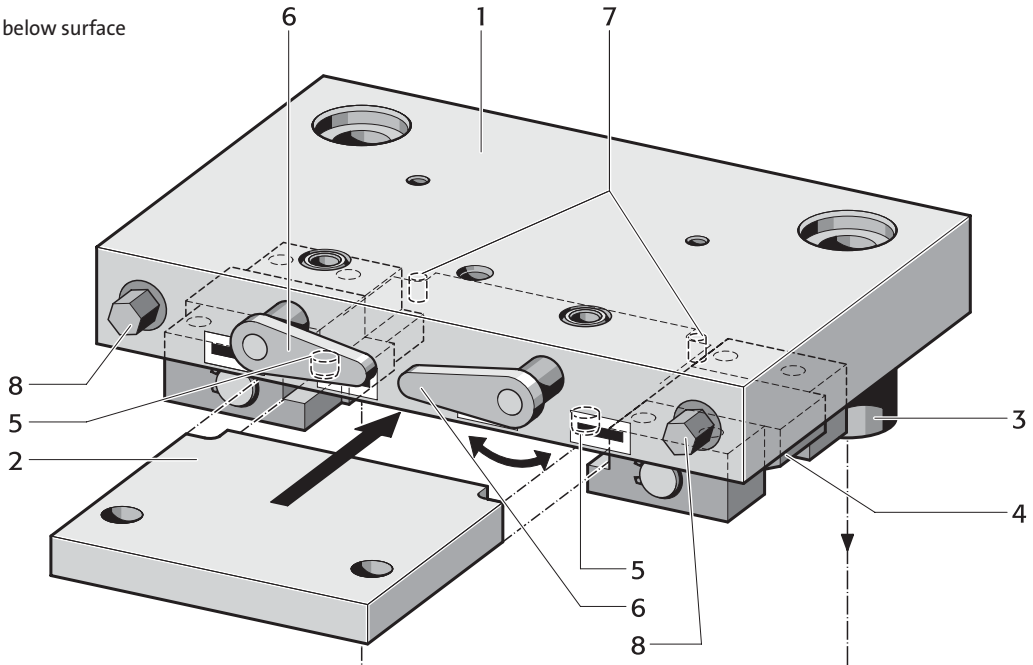
Sheet less than 0,4 mm in thickness is normally not recommended for the system – on account of the smaller punch-to-die clearances associated with thin stock materials, where the normal positioning accuracy within the carrier die set (approximately 0,02 mm) becomes insufficient.

However, through fitting of conical centring units the overall alignment accuracy can be improved to an extent where even sheet below 0,4 mm thickness can be processed successfully.

Fast Exchange System for Pallet Tooling

Top Bolster of Pallet Die Set

1 top bolster
2 pallet carrier plate – for slide-in insertion
3 guide bushes – optionally sliding –
or ball bearing guides
4 clamp
5 positioning pin – descends below surface
6 positioning pin lever
7 stop pin
8 clamping screw



Bottom Bolster of Pallet Die Set

1 bottom bolster
2 pallet carrier plate – for slide-in insertion

Pallet Carrier Plate
Bolster Insert Plate

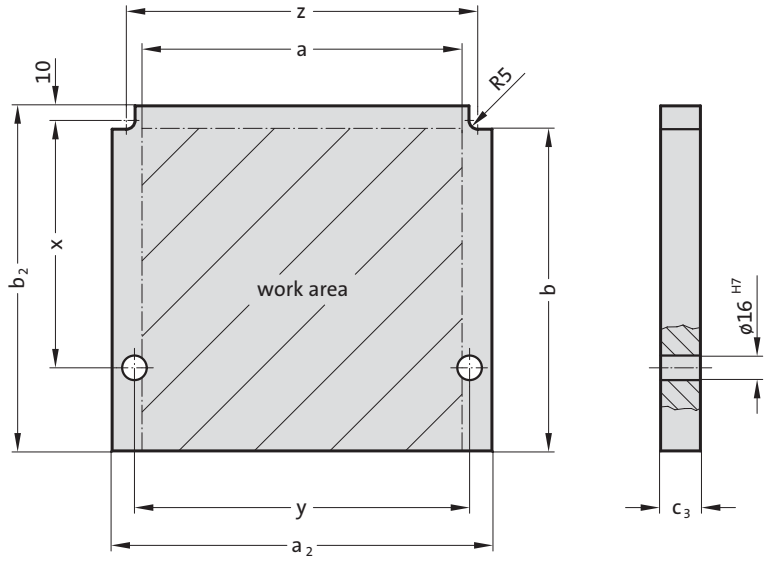
Pallet Carrier Plates

For each pallet tooling set, two carrier plates 201.96. are required – one for mounting the top tooling details, the other for the bottom tooling.

The tooling components are dowelled into position.

CAD

201.96.



201.96. Pallet Carrier Plate

Order No	work area a × b	a_2	b_2	c_3	x	y	z

201.96.3521	350 × 210	400	225	25	160,1	370	380

Bolster Insert Plates

This insert plate has to be added to a tooling pallet set if:

- scrap holes near the centre require additional support
- spring cushions or bottom ejectors have to be employed
- other features of specific die designs require an individual insert plate

Bolster insert plates have a dowel that makes them non-reversible.

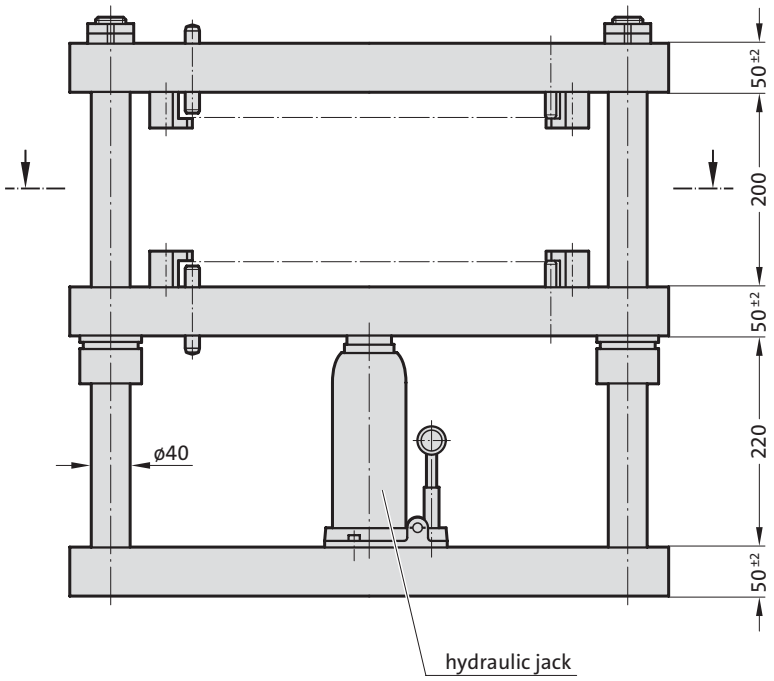
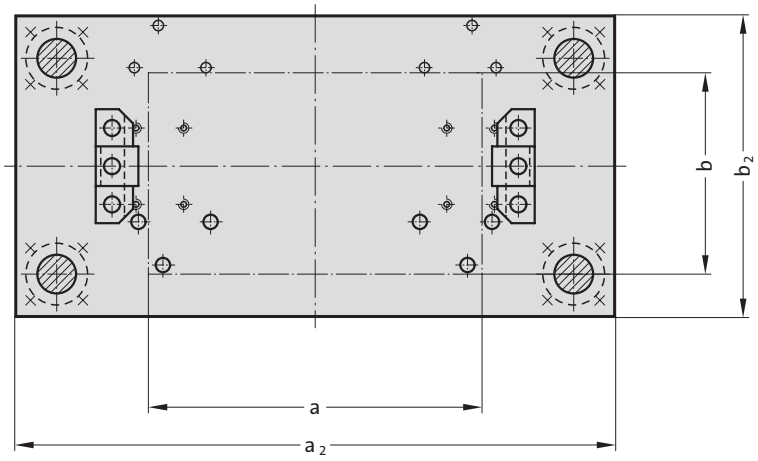
Aligning- and Tryout Press Unit

201.98.





Description

These press units have manual actuation by way of a hydraulic jack which forces the guided bolster upwards. In the toolroom they serve as tryout- and setting press, especially for tooling pallet sets. For the latter purpose they are equipped with simplified but functionally similar features for positioning and clamping as those in FIBRO Tooling Pallet Die Sets.

Moreover the press units provide ideal facilities for the press-fitting of pillars and bushes etc. – or their removal. For blueing-in and tryout of all sorts of press tools they soon prove themselves as an indispensable workshop facility, with a maximum thrust of 10 tons.

Material:

Plate: St 52-2

Execution:

Headed ball bearing guide bushes, hydraulic jack, 10 tons capacity

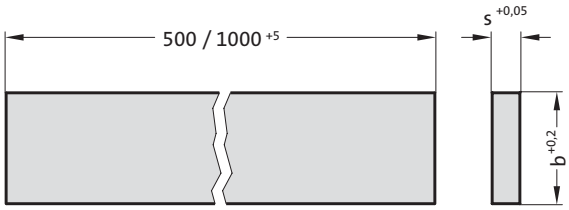
Precision flat and square bar steel with machining allowance, DIN 59350		=	2923.2767.
Width B	10.4 mm	=	010.
Thickness S	10.4 mm	=	010.
Length L	500 mm	=	0500
Order No		=	2923.2767. 010. 010. 0500

Precision flat and square bar steel, DIN 59350

2922.2842.



Material:

1.2842 / 90 MnCrV
Cold worked steel

Execution:

Thickness precision ground, width ground or milled, length machined

Note:

● = available in 500 mm and 1000 mm lengths
○ = only available in 500 mm lengths

Precision feeler gauge
Foil shim

Typical Applications:

- ☐ Tolerance measurement of internal and external dimensions.
- ☐ Adjustment of tooling devices and machine parts.
- ☐ Testing valve and cylinder clearances.

Material:

C-Steel, Material-No.: 1.1274
Stainless steel, Material-No.: 1.4310

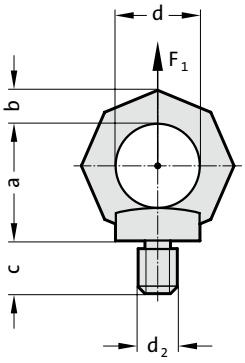
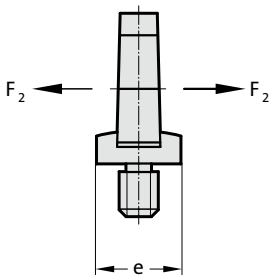
Lifting eye bolt, high tensile

2131.10.





Description:

During use check that the eyebolt is firmly seated.
Rotation during the lifting operation must be avoided.
It will not rotate automatically to the correct load angle.
Not approved for mining applications.

Material:

1.6541, heavy duty heat treated.
100% electromagnetically crack tested, to EN 1677-1, safety factor 4:1.

Note:

Ensure that the bolting surface is flat. Thread must be screwed in completely.
Form: = octagonal, Grade 8
Identification: clear indication of permissible load for F_2 category critical loads (not permissible for DIN 580)

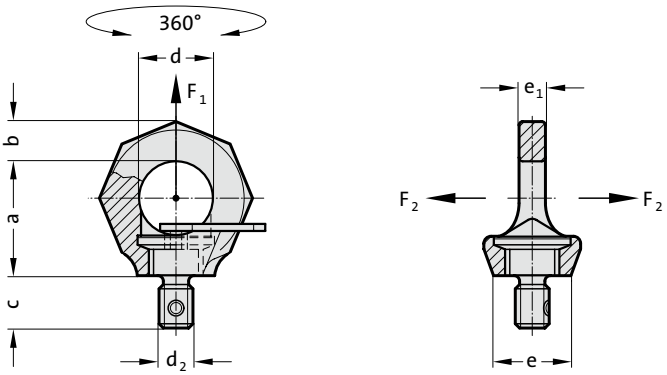
We recommend that you use the eyebolt 2131.11. that is adjustable in the direction of force for the type of suspension with no details of carried loads!

LIFTING EYE BOLT, ROTATABLE

2131.11.



Description:

During use check that the hexagon socket screw is firmly seated. Can be set for the direction of application so that there is no accidental turning and flipping over. Captive hexagon socket screw. No tools are required as the hexagon socket screw is supplied with a hardened star profile key. The star profile key engages in the hexagon socket. It can be screwed and unscrewed by hand.

Make sure that the ring is free to rotate through 360° when the unit is screwed in.

Material:

1.6541, forged, heavy duty heat treated.

100% electromagnetically crack tested, to EN 1677-4, safety factor 4:1.

Note:

Ensure that the bolting surface is flat. Thread must be screwed in completely.

Form: octagonal – clearly distinguishable to DIN 580 eye bolt

Identification: clear indication of permissible load

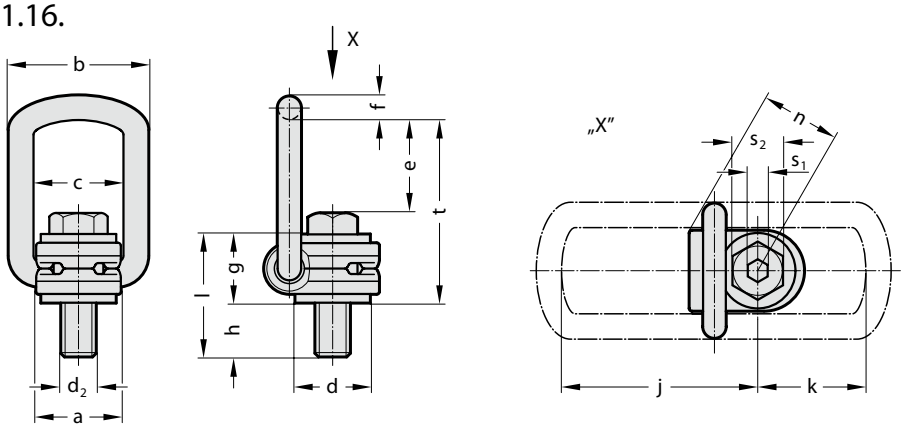
Hoisting snap link

2131.16.



Description:

The hinged unit is free to rotate through 360°, self-align with the direction of pull and folding. The hoisting Snap Link must be installed in the stress direction before loading, must be able to move freely and may not be supported at an angle.
Do not rotate under load.
Full load bearing capacity in any direction.
Complete with a 100% crack-checked outer and inner hexagonal bolt for universal tool use.

Note:

Ensure even screw-in surface, threads must be screwed in completely.

2131.16. Hoisting snap link

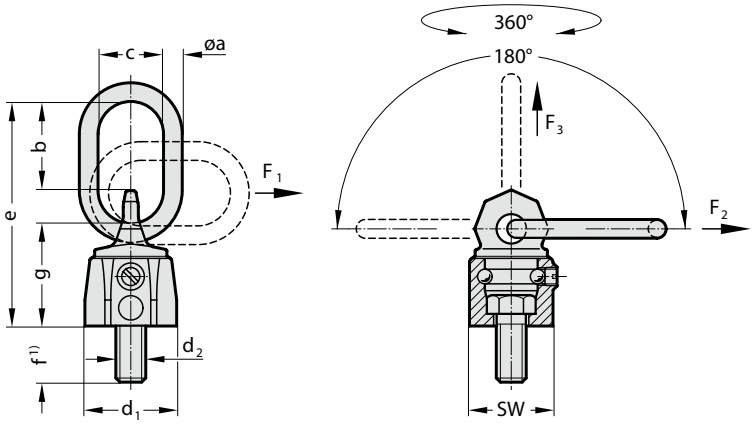
Rotary safety eyebolt, light duty, with ball bearing

2131.20.



Description:

For loads that are turned and rotated.
Mounted on ball-bearings – can be rotated through 360° under load (F_3).
Cannot be rotated under full load at 90° to the threaded fixing (F_1, F_2).
Not suitable for extended rotational movement when fully loaded.
Can be loaded on all sides with a safety factor 4:1.
High-strength suspension eye conforming to EN 1677-4
1) Other thread lengths available upon request.

Note:

Ensure that the bolting surface is flat. Thread must be screwed in completely.
The threaded connection on the transported load must be suitable for transferring forces.

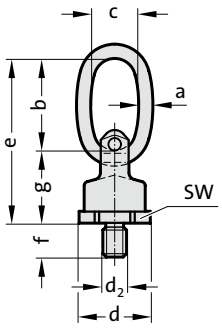
Universal rotary safety eyebolt with oval ring

2131.25.



Description:

The unviversal rotary safety eyebolts with oval ring with double ball bearing for smooth non-jerking action tipping, rotating and turning.
Also rotates 90° in direction of screwing in with full load.
Not suitable for extended rotational movement when fully loaded.
The special design avoids damage to lifting elements and the valuable load when turning.
For ring hoists, slings, cables, hooks etc.

Note:

Ensure even screw-in surface, threads must be screwed in completely.

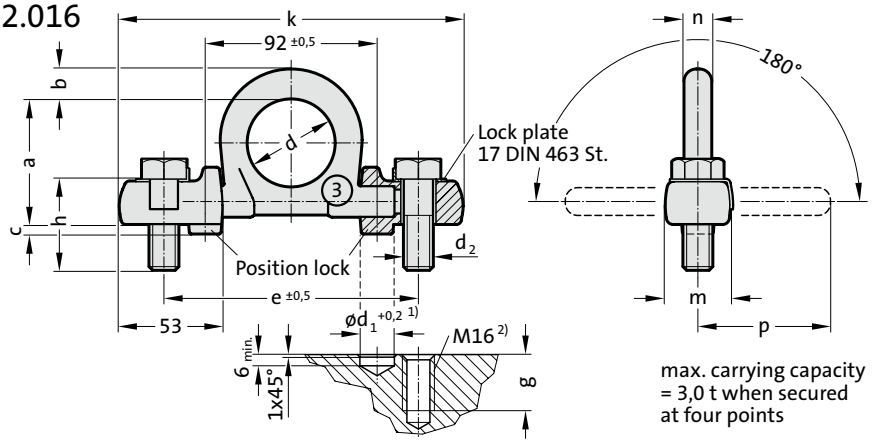
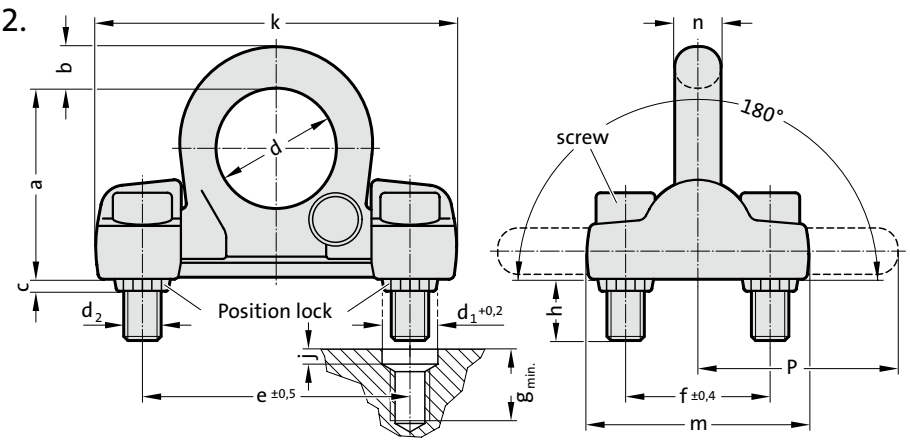
Ring block with position lock

2131.22.016



2131.22.



Description:

The position locks protect the fixing bolts against bending and shear stresses. The ring can be folded down.

Note:

1) Drill the holes for the position locks first.
2) Fix the ring block in the position lock and then tap the holes.
Ensure that the bolting surface is flat.
See also loading of eyebolts.
The threaded connection on the transported load must be suitable for transferring forces.

Fixing:

Only use 100% crack tested bolts.
Once bolts have been in use for some time, check that they are firmly seated.
Minimum grade of screws, see table: "Y"
2131.22.016.: Only use hexagonal bolts to ISO 4014. Fit washers before tightening and securing bolts (tightening torque 120 Nm).

2131.22.020./030.: Use only hexagon socket head screws conforming to ISO 4762 (2131.22.020 tightening torque 300 Nm, 2131.22.030 tightening torque 600 Nm).

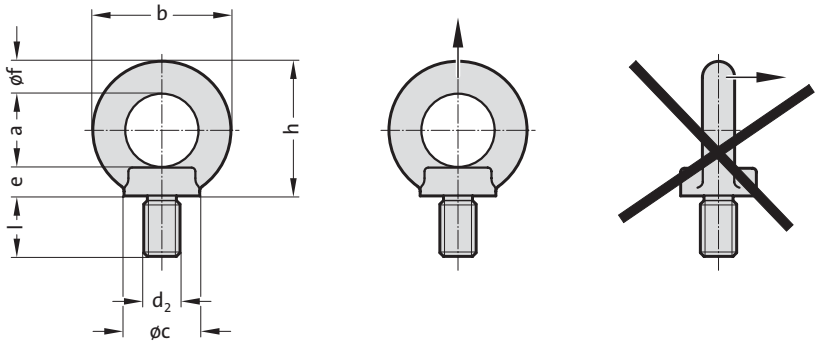
Lifting eye bolt, high tensile

2131.30.



Description:

Only tighten eyebolts hand-tight. Not suitable for diagonal pull. Avoid turning movements during transport.

Material:

Alloyed steel, hardened and tempered, quality class 8

Note:

Load capacity according to operating instructions or load capacity table in the specified directions of pull.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:
- no free adjustment is possible in the direction of pull
- direction of pull does not lie in the specified range

Safety factory 4

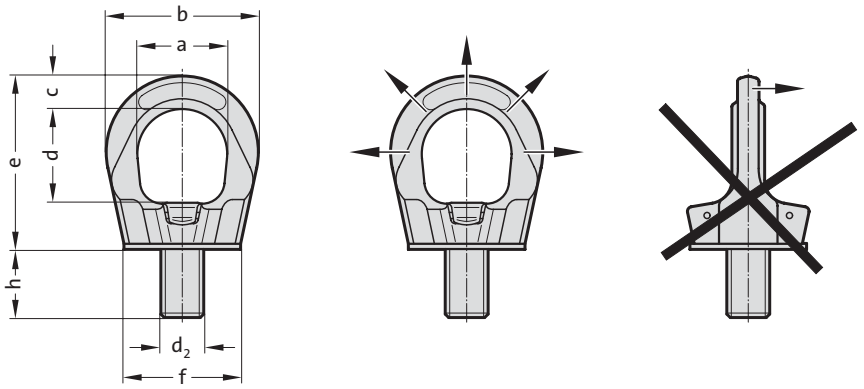
Load the eyebolt in the pull direction only! For these lifting types, use the turnable eyebolt 2131.31. or the turnable attachment point 2131.34

Attachment point screwable profilift gamma

2131.31.



Description:

When replacing, make sure the Allen screw is seated firmly. Adjustable in the direction of force, thus no unintended opening up and overtwisting! Screwing in and out by hand possible. The ring must be able to be turned 360° in the screwed tight state.

Material:

Structural parts: High-strength chrome nickle alloyed Q & T steel.
Screws: High-strength screws strength class 10.9, 100 % crack tested

Note:

Ensure even screw-in surface, threads must be screwed in completely.
Each attachment point is provided with an individual serial number
Information about installation and removal, see operating instructions.
Load capacity according to operating instructions or load capacity table in the specified directions of pull.
Set attachment point in permitted loading direction before loading.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:
- no free adjustment is possible in the direction of pull
- direction of pull does not lie in the specified range
Safety factor 4

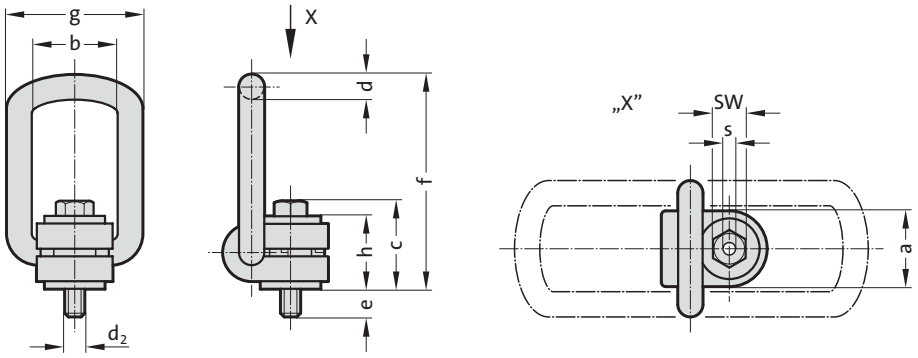
Hoisting snap link, omnidirectional

2131.33.



Description:

The hinged unit is free to rotate through 360°, self-align with the direction of pull and folding. The hoisting Snap Link must be installed in the stress direction before loading, must be able to move freely and may not be supported at an angle.
Do not rotate under load.
Full load bearing capacity in any direction.
Complete with a 100% crack-checked outer and inner hexagonal bolt for universal tool use.

Material:

Alloyed tool steel

Note:

Ensure even screw-in surface, threads must be screwed in completely.

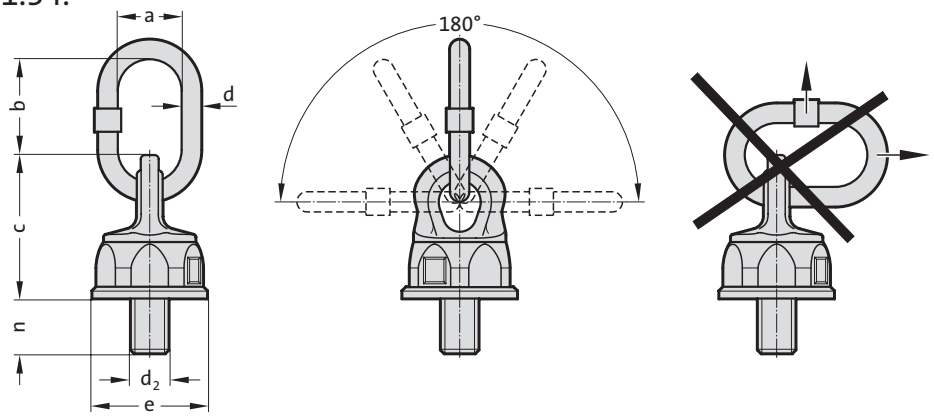
Attachment point screwable profilift delta

2131.34.



Description:

For loads which are turned and flipped.
Ball-bearing-mounted – under load turnable by 360°
Not suitable for continuous turning movements under full load.

Material:

Structural parts: High-strength chrome nickle alloyed Q & T steel.
Screws: High-strength screws strength class 12.9, 100 % crack tested

Note:

Ensure even screw-in surface, threads must be screwed in completely.
The threaded connection on the transport belt must be suitable for the force transmission.
Each attachment point is provided with an individual serial number

Information about installation and removal, see operating instructions.
Load capacity according to operating instructions or load capacity table in the specified directions of pull.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:
- no free adjustment is possible in the direction of pull
- direction of pull does not lie in the specified range
- when fit closely at edges or surfaces
Safety factor 4

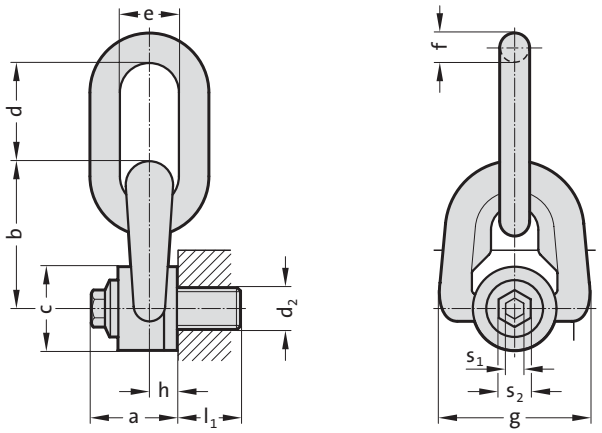
Triple vortice ring

2131.35.



Description:

The triple vortice rings with double bearing mount for smooth tipping, turning and flipping.
Also turnable 90° for screw-in direction under full load.
Not suitable for continuous turning movement under full load.
The optimised design prevents damage to lifting tackle and the valuable load when turning.
For ring assembly, round slings, wire ropes, hook assemblies, etc.

Material:

High-strength chrome-nickle alloyed Q & T steel,
Screws: high-strength screws, min. strength category 10.9, 100 % crack inspected

Note:

Ensure even screw-in surface, threads must be screwed in completely.

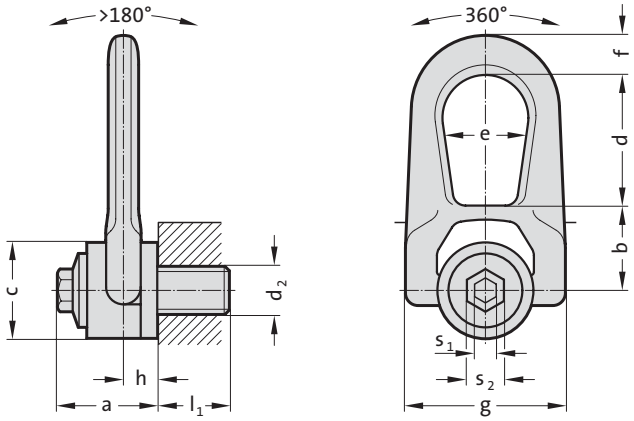
Double vortice ring

2131.37.



Description:

The double vortex ring was especially designed to guarantee lifting under rotation.
Its double joint permits a perfect alignment for load suspension.

Material:

High-strength chrome-nickle alloyed Q & T steel,
Screws: high-strength screws, min. strength category 10.9, 100 % crack inspected

Note:

Ensure even screw-in surface, threads must be screwed in completely.
The threaded connection on the transport belt must be suitable for the force transmission.
Each attachment point is provided with an individual serial number
Information about installation and removal, see operating instructions.
Load capacity according to operating instructions or load capacity table in the specified directions of pull.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:
- no free adjustment is possible in the direction of pull
- direction of pull does not lie in the specified range
Safety factor 5

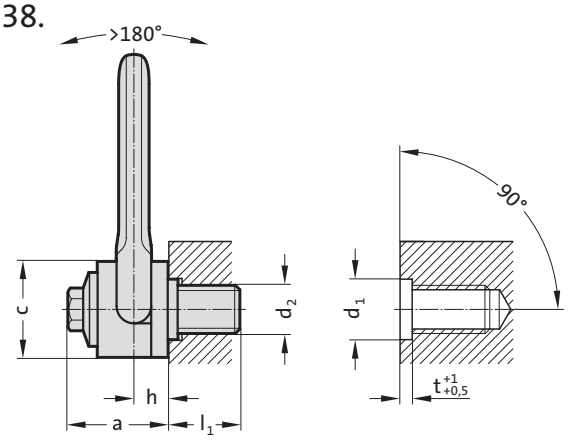
Double vortice ring with central device

2131.38.



Description:

The double vortex ring with centring device was especially designed to guarantee lifting under rotation.
The centring device increases the resistance of the axis in case of lateral mounting.

Material:

High-strength chrome-nickle alloyed Q & T steel,
Screws: high-strength screws, min. strength category 10.9, 100 % crack inspected

Note:

Ensure even screw-in surface, threads must be screwed in completely.
The threaded connection on the transport belt must be suitable for the force transmission.
Each attachment point is provided with an individual serial number
Information about installation and removal, see operating instructions.
Load capacity according to operating instructions or load capacity table in the specified directions of pull.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:
- no free adjustment is possible in the direction of pull

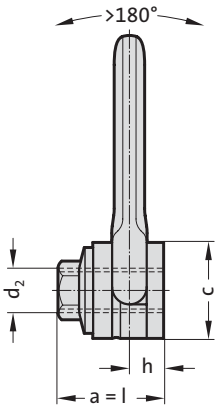
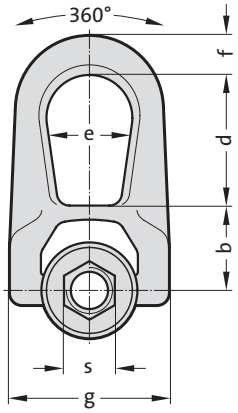
Double vortice ring with internal thread

2131.39.





Description:

The double vortex ring with internal thread was especially designed to guarantee lifting under rotation.
Its double joint permits a perfect alignment for load suspension.

Material:

High-strength chrome-nickle alloyed Q & T steel

Note:

Ensure even screw-in surface, threads must be screwed in completely.
The threaded connection on the transport belt must be suitable for the force transmission.

Each attachment point is provided with an individual serial number
Information about installation and removal, see operating instructions.
Load capacity according to operating instructions or load capacity table in the specified directions of pull.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:
- no free adjustment is possible in the direction of pull
- direction of pull does not lie in the specified range
Safety factor 5

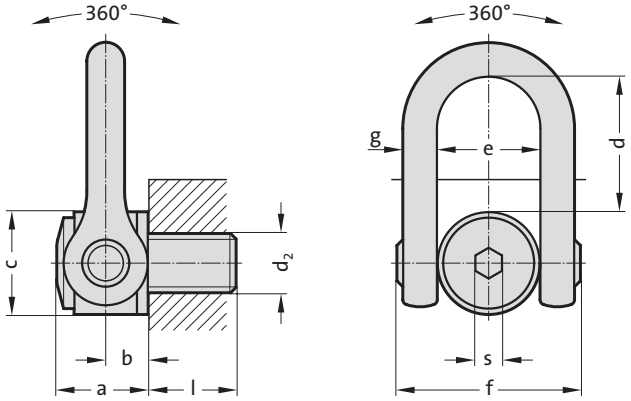
Double vortex ring screw

2131.40.



Description:

The double vortex ring screw was especially designed for the lifting and rotating of heavy loads.
Load bearing capacity in all directions and perfect alignment for load suspension.

Material:

High-strength chrome-nickle alloyed Q & T steel,
Screws: high-strength screws, min. strength category 10.9, 100 % crack inspected

Note:

Ensure even screw-in surface, threads must be screwed in completely.

The threaded connection on the transport belt must be suitable for the force transmission.
Each attachment point is provided with an individual serial number
Information about installation and removal, see operating instructions.
Load capacity according to operating instructions or load capacity table in the specified directions of pull.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:

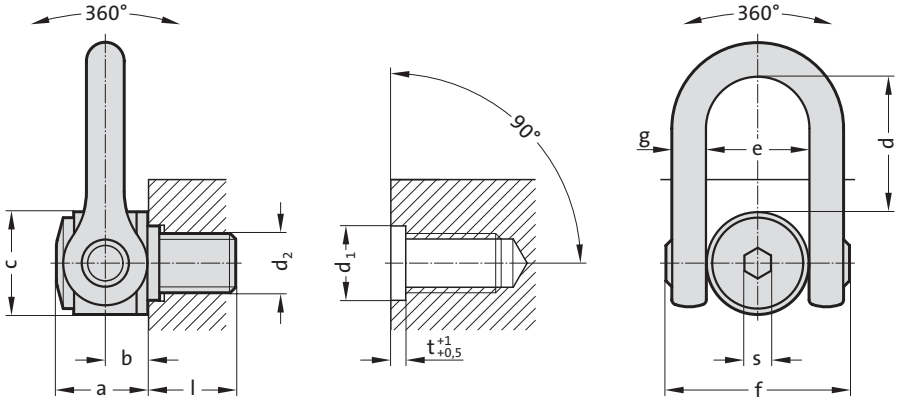
Double vortex ring screw with centring

2131.41.



Description:

The double vortex ring screw with centring device was especially designed for the lifting and rotating of heavy loads. The centring device increases the resistance of the axis in case of lateral mounting.
Load bearing capacity in all directions and perfect alignment for load suspension.

Material:

High-strength chrome-nickle alloyed Q & T steel,
Screws: high-strength screws, min. strength category 10.9, 100 % crack inspected

Note:

Ensure even screw-in surface, threads must be screwed in completely. The threaded connection on the transport belt must be suitable for the force transmission.
Each attachment point is provided with an individual serial number
Information about installation and removal, see operating instructions.
Load capacity according to operating instructions or load capacity table in the specified directions of pull.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:
- no free adjustment is possible in the direction of pull
- direction of pull does not lie in the specified range

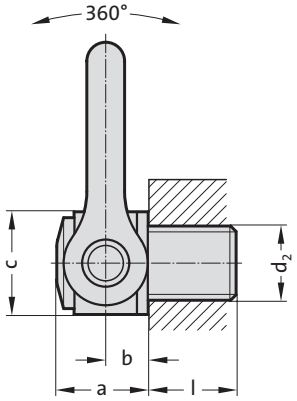
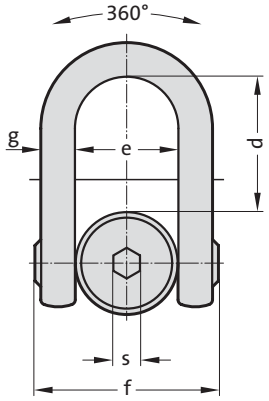
Double vortex ring screw Mega DSS

2131.42.





Description:

The Mega double vortex ring screw was specially designed to lift and rotate under a load of up to 50 tons. It can be used directly with the lifting equipment (hook of the travelling crane).
Load bearing capacity in all directions and perfect alignment for load suspension.

Material:

High-strength chrome-nickle alloyed Q & T steel,
Screws: high-strength screws, min. strength category 10.9, 100 % crack inspected

Note:

Ensure even screw-in surface, threads must be screwed in completely.
The threaded connection on the transport belt must be suitable for the force transmission.
Each attachment point is provided with an individual serial number
Information about installation and removal, see operating instructions.
Load capacity according to operating instructions or load capacity table in the specified directions of pull.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:
- no free adjustment is possible in the direction of pull
- direction of pull does not lie in the specified range
Safety factor 4

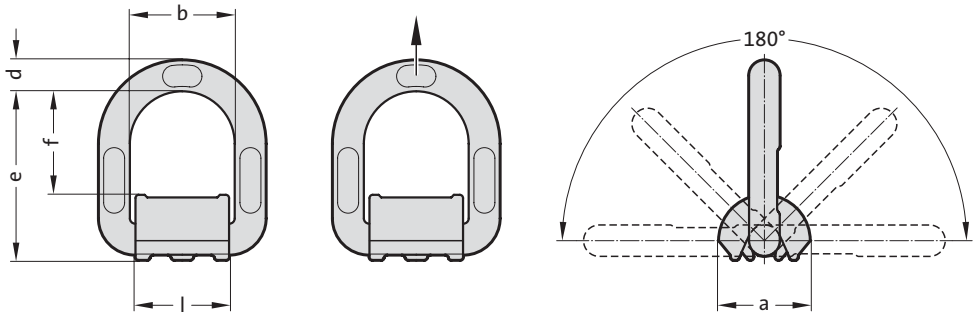
Attachment point weldable profilift eta

2131.50.



Description:

For welding work, the conditions according to DIN EN ISO 14341 apply. Welding work may only be performed by a welder with qualification according to EN 287-1.

Material:

Weld-on bracket: S355 J2 G3
Ring: high-strength alloyed steel

Note:

Information about installation and removal, see operating instructions. Load capacity according to operating instructions or load capacity table in the specified directions of pull.

When selecting the arrangement, make sure that unequal loading does not occur, e.g. if:
- no free adjustment is possible in the direction of pull
- direction of pull does not lie in the specified range
- when fit closely at edges or surfaces

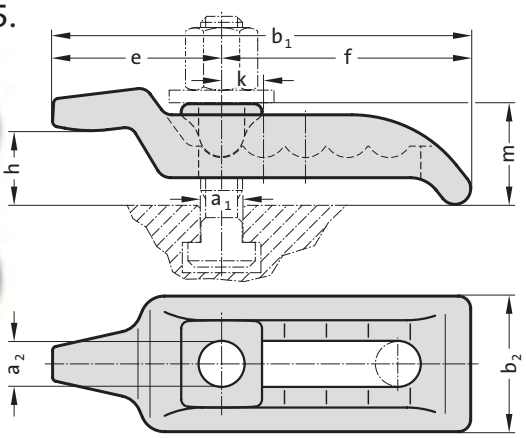
2140.15.



Material:
Steel, forged and heat-treated ,
galvanised and yellow passivated

Note:
Clamping claws quickly span very different clamping heigths without the need for additional supports and take up very little space on the machine table. They are designed for maximum loads and are particularly suitable for clamping cutting and punching tools.

Supplied without clamping bolt,
suitable clamping bolts: 2140.30.

2140.15. Clamping claw, goose-neck shape

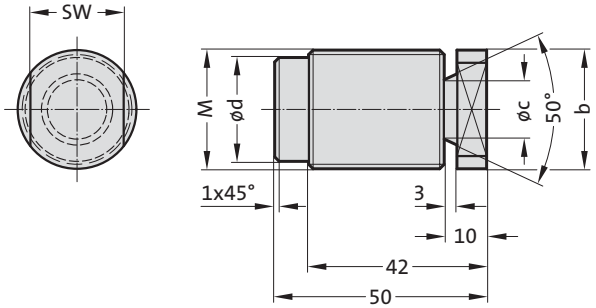
Screw plug

2192.90.



Description:

Repair solution:
Screw plugs are used to seal off defective boreholes, pass-through holes or shrink holes.

Note:

Screw in the screw plug as far as it will go (minimum screw-in length =diameter).
The screw plug can be secured to prevent it becoming loose during reworking by applying, for example, high-strength LOCTITE® (order no. 281.270).
Remove width across flats and protubing thread mechanically.

2192.90. Screw plug

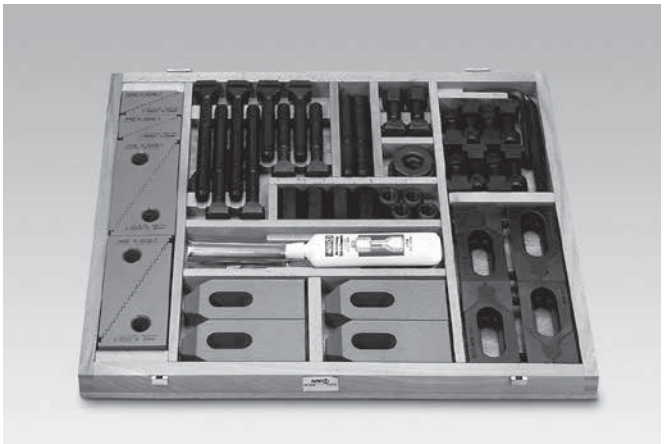
*SW = width across flats

Clamping tool set



Clamping tool set

with clamping jaws and screw paste.

The clamping tool set is designed for machine tools with bedplates that have fixing slots and they contain all the necessary components for fast clamping of tools, devices and workpieces. All parts are interchangeable and complementary to each other. They are made of high tensile steel to DIN or company standards. Bolt items strength class 8 or 10. The wooden box has a detachable hinged cover.

Guide Elements

Guide Elements

The great importance of exact alignment between punches and matrices in stamping dies has been recognized widely. The accuracy and maintenance of this alignment depends entirely on the quality and wear resistance of the guide elements.

As a consequence of recent rapid developments in stamping techniques it has also been accepted that conventional bush-pillar sets of casehardened steel can no longer stand up to the demands of the modern press shop with its more sophisticated dies, ever faster presses and the stresses in today's carbide tools.

The introduction of FIBRO Guide Elements made available an extensive range, principally based on superlative quality, and comprising some new, highly advanced bearing materials as well as novel assembly techniques of superior accuracy.

Recent additions have further broadened this range, especially in regard of demountable guiding components.

All FIBRO Guide Bushes for permanent fixing are laid out for epoxy-bonding. This highly reliable method ensures unparalleled accuracy together with the elimination of shrink allowances and rectification honing.

Ball Bearing Guides principally excel in undemanding maintenance and through the complete absence of bearing play. Their easy movement on the bench makes them very popular with die makers. Highest stroking speeds present no problems. But common to all ball bearings there remains the characteristic weakness to shock loads, the danger of ball impingement. To some extent this can be compensated for by oversized pillar diameters and the use of four-pillar die sets.

The group of Sliding-Type Guides affords much greater stability, partly due to the damping effect of the all-important, vital oil film . . . which in the past used to be threatened always by the vagaries of lubrication service and the propensity to rupture at high frequencies of travel reversal.

Extensive protection against these perils is offered by FIBRO Sintered Ferrite Bushes. Used in most of our sliding guide systems, their advanced technology comprises:

– porous structure, vacuum-filled with oil
– carbonitrided surface of extreme hardness
– outstanding friction properties
– exceptional wear-resistance
– thousands of oil-retaining porosity pockets.

In combination with our mirror-finished pillars, ferrite guide bushes represent a guiding system of alltogether superior properties. A system that virtually precludes seizing under all but the most extreme running conditions.

Beyond such limitations there exist combinations of high velocities with very short strokes where even ferrite bushes cannot guarantee permanence of the oil film.
Here, the rigidity of the sliding guide has to be weighed up against the safety of ball bearings: die set guides are not entirely without problems yet! But at FIBRO we find ourselves very busy indeed with the remainder.

Technical progress may incur modifications without notice.

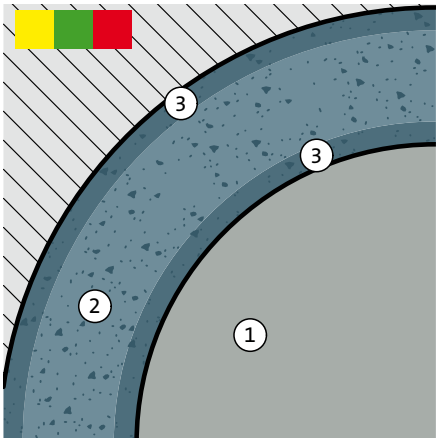
NOTES ON GUIDE ELEMENTS

Precision slide guide, sintered ferrites

This guide type consists of self-lubricating sintered ferrites with carbonitrided surface.

The sintered material used has a porosity content of 18-20 by volume that is filled with an oil under vacuum. In ongoing operation, this oil enters the sliding zone, facilitating long-term lubrication (depending on the usage conditions). As initial and additional lubrication, a suitable grease can be filled into the supply grooves, which reduces the maintenance intervals.
Carbonitriding - a case hardening process - considerably increases the wear resistance of the sliding layer. The precision ground running surface achieves very high quality in terms of dimensional and shape tolerances and low roughness. The guidance accuracy can be changed via pairing classification.
☞ For bearing clearance ranges, see chapter D.

(1) Guide pillar (2) Sintered ferrite guide bush (3) Carbonitriding

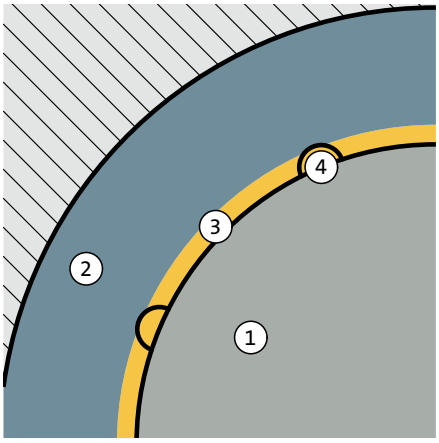


Precision slide guide, bronze-coated

This guide type consists of a steel body with bronze-coated running surface with helical oil groove and a lubricating nipple for ongoing lubrication.

The steel body used ensures a high level of intrinsic stability even with high side and edge loads due to its high tensile strength.
The bronze running surface is optimally connected to the steel body and has very good emergency running properties. A permanent lubricant supply with grease is necessary for reliable continuous operation.
The precision ground running surface achieves very high quality in terms of dimensional and shape tolerances and low roughness.

(1) Guide pillar (2) Guide bushing (3) Bronze coating (4) Oil groove

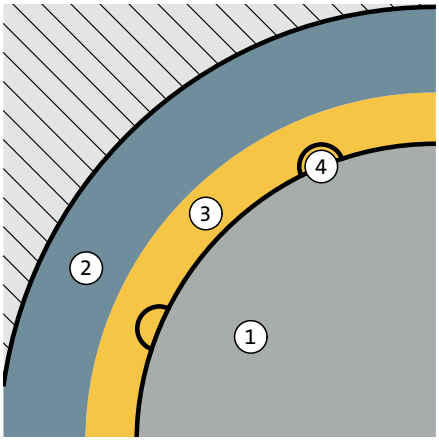


Slide guide, bronze-coated (ECO-LINE)

This guide type consists of a steel body with bronze-coated running surface with helical oil groove and a lubricating nipple for ongoing lubrication.

The steel body used ensures a high level of intrinsic stability even with high side and edge loads due to its high tensile strength.
The bronze running surface is optimally connected to the steel body and has very good emergency running properties. A permanent lubricant supply with grease is necessary for reliable continuous operation.
The precision ground running surface achieves high quality in terms of dimensional and shape tolerances and low roughness.

(1) Guide pillar (2) Guide bushing (3) Bronze coating (4) Oil groove

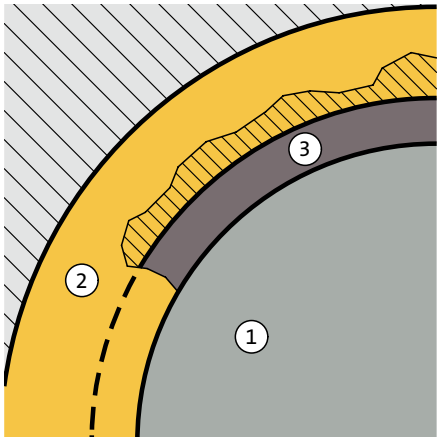


Slide guide with solid lubrication rings (ECO-LINE)

This low-maintenance guide type consists of a copper alloy with integrated solid lubrication rings.

The base frame material used offers good guide stability and very good emergency running properties. Following initial lubrication, the solid lubrication is slowly distributed into the sliding zone in ongoing operation of the solid lubrication and provides low-maintenance operation (depending on the usage conditions). The solid lubrication rings take up 25-35% of the total guide surface (depending on the design) and only permit linear movements.
The ground running surface achieves good quality in terms of dimensional and shape tolerances and optimal roughness.
☞ see low-maintenance sliding elements - description

(1) Guide pillar (2) Guide bushing (3) Solid lubrication ring



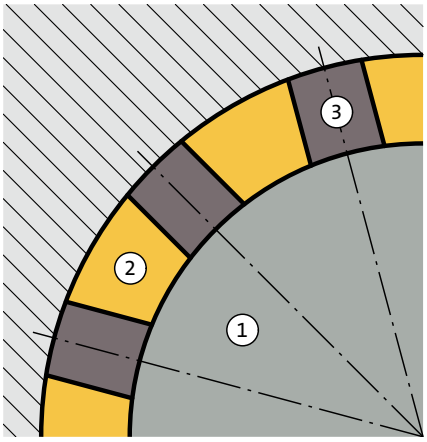
NOTES ON GUIDE ELEMENTS

Slide guide with non-liquid lubricant pockets

This low-maintenance guide type consists of a copper alloy with integrated non-liquid lubricant pockets.

The base frame material used offers good guide stability and very good emergency running properties. Following initial lubrication, the solid lubrication slowly enters the sliding zone in ongoing operation of the solid lubrication and provides low-maintenance operation (depending on the usage conditions). The non-liquid lubricant pockets take up 25-35% of the total guide surface (depending on the design) and permit linear and/or rotational movements (depending on the organisation of the non-liquid lubricant pockets).
The ground running surface achieves good quality in terms of dimensional and shape tolerances and optimal roughness.
☞ see low-maintenance sliding elements - description

(1) Guide pillar (2) Guide bushing (3) Non-liquid lubricant pocket

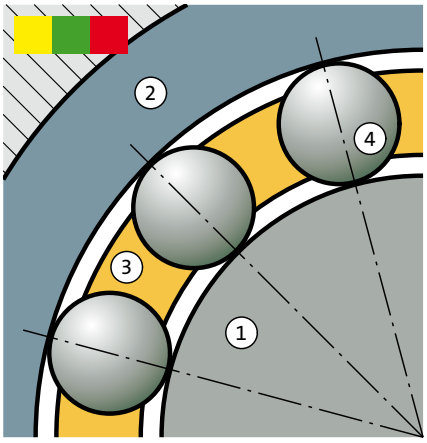


Precision roller bearing

This guide type is backlash-free with high stability due to pre-stressed roll barrels (balls) and suitable for maximum speeds thanks to the low rolling friction.

The base frame material used for the guide bushes offers very good guide stability. Together with the hardened precision balls and corresponding gliding pins, this creates smooth-running and precise guidance. Due to the point contact of the rollers, this is not completely rigid under load, however. This can be influenced via the pairing classification.
The ball cages are made from brass or aluminium and due to the high number of rollers have a high dynamic load index – a significant factor for long service life.
The precision ground running surface achieves very high quality in terms of dimensional and shape tolerances and minimal roughness.
☞ For bearing clearance ranges, see chapter D.

(1) Guide pillar (2) Guide bushing (3) Brass or aluminium cage (4) Ball

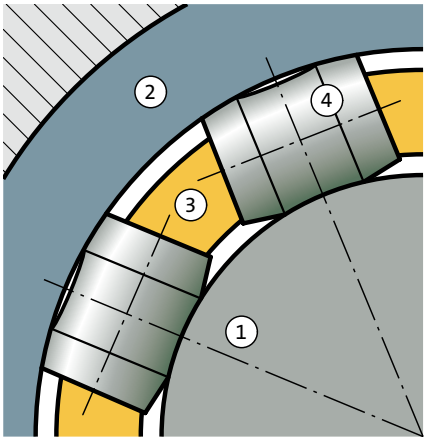


Precision roller guide

This guide type is backlash-free with very high stability due to pre-stressed roll barrels (rolls) and suitable for maximum speeds thanks to the low rolling friction.

The guide bushes for ball guides are also used here. Together with the hardened precision rollers and corresponding gliding pins, this creates smooth-running and very precise guidance. Due to the linear contact of the rollers this is not completely rigid under load, but is considerably more stable than ball guides.
The roller cages are made from brass and due to the optimum number of rollers have a high dynamic load index – a significant factor for long service life.
The precision ground running surface achieves very high quality in terms of dimensional and shape tolerances and minimal roughness.
To achieve optimal bias, only gliding pins red = .30 and gliding pins yellow = .10 are used!

(1) Guide pillar (2) Guide bushing (3) Cage (4) Roller

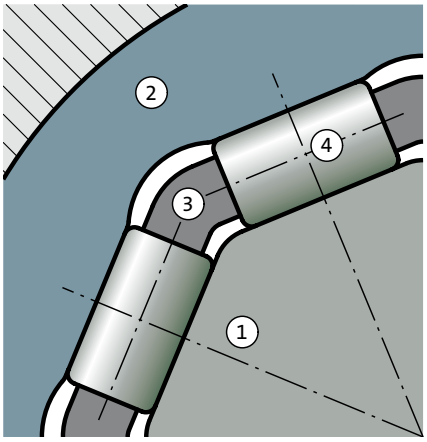


Precision needle roller guide (Million Guide)

This guide type is back-lash free with maximum stability due to pre-stressed roll barrels (needle rolls) and suitable for maximum speeds due to the low rolling friction.

The Million Guide units represent the tip of the guide units. Together with the hardened precision needle rollers and corresponding gliding pins and bushes, this creates smooth-running and maximum precision guidance. Due to the linear contact of the rollers this is not completely rigid under load, but is more stable than roller guides.
The needle roller cages are made from plastic and due to the optimum number of rollers have a high dynamic load index – a significant factor for long service life.
The high-precision ground running surface achieves maximum quality in terms of dimensional and shape tolerances and very low roughness.
The components of this guide unit are coordinated with one another and for optimum bias.

(1) Guide pillar (2) Guide bushing (3) Plastic ball cage (4) Needle roller



GUIDE TYPE SELECTION AID

Criteria / Guide type	Precision slide guide, sintered ferrites	Precision slide guide, bronze-coated	Slide guide, bronze-coated (ECO-LINE)	Slide guide with solid lubrication rings (ECO-LINE)	Slide guide with non-liquid lubricant pockets	Precision roller bearing	Precision roller guide	Precision needle roller guide (Million Guide)
Load capacity / High stresses	++	++	+	+++	+++	o	++	+++
Impact load / Pulsations	-	++	++	++	++	-	o	o

Low-maintenance operation	++	-	-	+++	+++	-	-	-
Tolerance to contamination and dust	-	o	o	+	++	-	-	-
Tolerance to pillar offset	o	+	+	++	++	-	-	-
Guide behaviour can change due to pairing classification	●					●		
Suitable for rotational movements	●	●	●		●[2]	●		
Low-corrosion designs (on request)						●		●

++++ = Excellent, +++ = excellent, ++ = good, + = satisfactory, o = adequate, - = Not as good

[1] Variable due to the pairing classification
[2] Depending on the arrangement of the solid lubricant deposits

The selection aid helps with orientation. Depending on the application, installation situation and ambient conditions, an advance check or test is essential.

Pairing Classification
Sliding guide (sintered ferrite)
Ball bearing guide

Recommendation for pairing selection:

Cutting clearance	Sliding guide bearing clearance	Ball bearing preloading	Description	Recommendation
small	small	large	Piece parts with small tolerances, closely specified cut edge properties and contours – also parts from thin material	Pairing 1
medium	medium	medium	Piece parts from sheet thicker than 1 mm – also pr eferably for progression dies	Pairing 2
large	large	small	Where demands on edges and burrs are not stringent; note that large die clearances require smaller shearing forces	Pairing 3

Selection of punch-matrix clearance is largely determind by piece part charcteristics such as percentage of sheared land versus breakaway, but also by demands on burr formation.

Further criterias are the part piece material, as well as the type and condition of the tooling and the press.

Combination possibilities guide pillars, cages and bushings:

	Sliding guide				Ball bearing			
	Guide pillar		Guide bush		Guide pillar		Guide bush	
	Colour	Order No	Colour	Order No	Colour	Order No	Colour	Order No

	red	.30	yellow	.10	green	.20	green	.20
	yellow	.10	green	.20	red	.30	red	.30
Pairing 3	red	.30	red	.30	green	.20	yellow	.10
	green	.20	red	.30	red	.30	green	.20
	yellow	.10	red	.30	red	.30	yellow	.10

Identification for tolerances with color dots on the outside of the guide pillars and bushings.

Selection Criteria: die clearance – stock thickness – material

Note for 4-pillar die sets:

Please be aware that tight bushing clearances or high preloads are generally unsuitable for 4-pillar die sets. Deviation from the bore geometry and from the perpendicularity requieres a pairing classification of pairing 2 or even better pairing 3. The pairing classification does not signify any difference in quality, rather a selection of the optimum bushing clearance in the case of guide pillars or the optimum preloading in the case of ball bearings (see also chart next page).

Ordering Code (example):

Guide Pillar, tolerance range yellow = 202.19.040.260.10

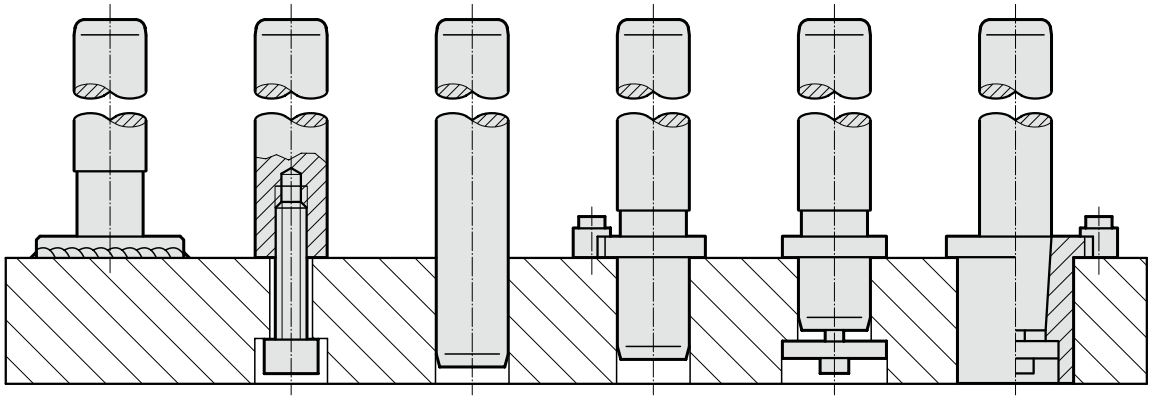
●[1] = suitable (see pairing classification at the beginning of chapter D)
O = Limited suitability
× = Not suitable

The combinations should be considered as recommendations. Depending on the installation situation and type of use, a previous examination or test is mandatory, since different combinations may result in varying clearance (slide guide) or pretension (ball guides) values.

Deflection of Pillars and Bending equation

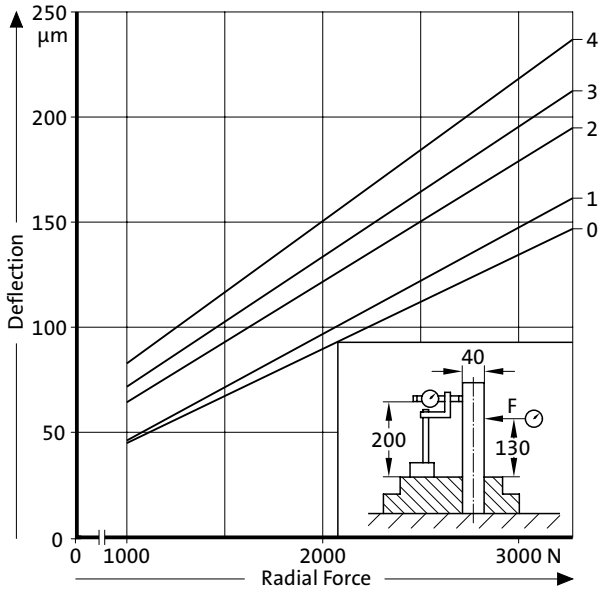


Deflection of Pillars

The practical applicatoin of these pillars demands a certain amount of re-thinking in regard of tool design. Deflection under radially imposed load is shown in the diagram of the right.

Mounting Instructions:

Coat head and threads of screws with molydenum disulfite.
Tighten and undo screw twice before final tightening with torque wrench.



Bending equation

The transverse load resistance to tool guides is greatly influenced by the position of the guide pillar fixing.

For a tool with a spring-mounted die guide plate and pillar fixing at the top or bottom of the tool, the defelction and pillar bending values do not differ when the load is applied at the side since the distance (L) from the point of application of the force is the same.

Significantly better pillar bending values can be achieved by fixing the guide pillars in the guide plate, i.e. in the center of the pillar.

Since the distance (L/2) between the point of application of the force and the fixing surface is thus halved, the load-bearing capacity is increased by eight times.

In order to keep moving mass to a minimum and thereby minimize detrimental forces of inertia, FIBRO Stripper-Mounted Pillars are made with a hollow core. Rigidity of the die set - of paramount importance - remains unaffected by the hollow design.

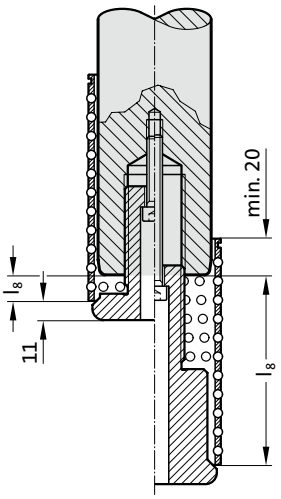
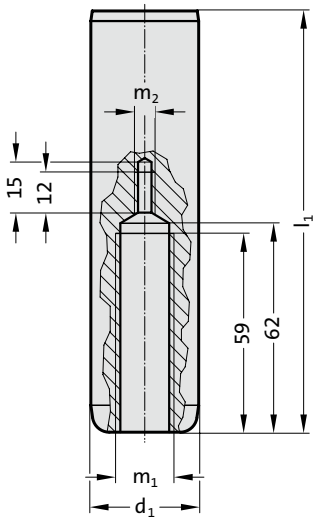
Guide pillar with cage retainer bore

Mounting example



202.19. .30.94



Material:

Steel, (Core strength: ≥ 900 N/mm²) surface hardened
Surface hardness: 60 + 3 HRC, Hardness penetration ≥ 1,8 mm

Execution:

fine-ground and superfinished

Note:

☞ Preloading see pairing classification at the beginning of chapter D
☞ Matching guide combinations, see selection matrix at the beginning of chapter D.
Dimensions of ball cage retainer see 202.94.
Tolerance range: red = .30
Delivery without cage retainer, ball cage and head cap screw.

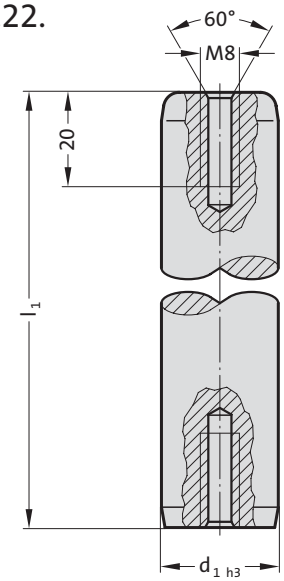
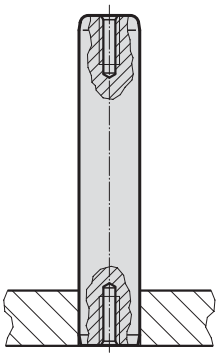
Guide pillar with internal thread on both sides, ~DIN 9825/~ISO 9182-2

202.22.



Mounting example



Material:

Steel, (Core strength: ≥ 900 N/mm²) surface hardened
Surface hardness: 60 + 3 HRC, Hardness penetration ≥ 1,8 mm

Execution:

fine-ground and superfinished
Method of manufacturing entails that centre holes are not concentric with O.D.

Note:

Bearing clearance / Preloading see pairing classification at the beginning of chapter D.
Matching guide combinations, see selection matrix at the beginning of chapter D.
Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.
Tolerance range:
yellow = .10
green = .20
red = .30

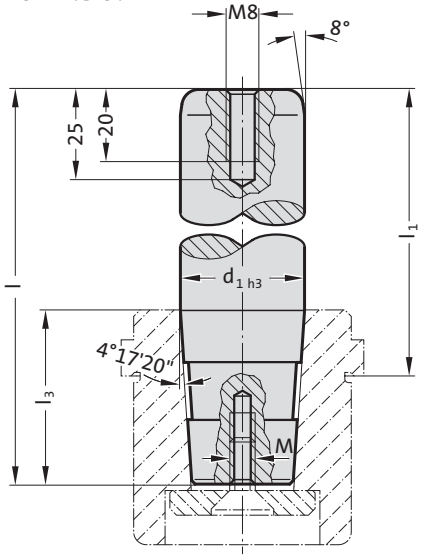
Guide pillar, conical, DIN 9825/ISO 9182-4/AFNOR

2021.50.



Description:

FIBRO demountable pillars with conical shaft 2021.50. are recommended where die sharpening etc. demands frequent demounting and re-fitting.

Material:

Steel, (Core strength: ≥ 900 N/mm²) surface hardened
Surface hardness: 60 + 3 HRC, Hardness penetration ≥ 1,8 mm

Execution:

fine-ground and superfinished
Method of manufacturing entails that centre holes are not concentric with O.D.

Note:

Matching retaining bushes 2021.39./210.39. and retaining discs 2021.53./202.53. to be ordered separately.
Preloading see pairing classification at the beginning of chapter D
Matching guide combinations, see selection matrix at the beginning of chapter D.
Tolerance range:
yellow = .10
green = .20
red = .30

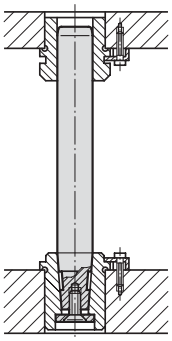
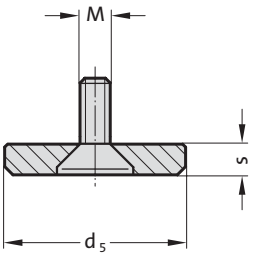
Retaining disc with countersunk head cap screw, DIN 9825/ISO 9182-4
Retaining disc with socket cap screw, ~ AFNOR

Mounting example



2021.53.



Material:
Retaining disc: Steel, burnished
Countersunk head cap screw DIN 7991/ISO 10642

Note:
Has to be ordered separately to guide pillar, conical according to DIN 9825 / ISO 9182-4 2021.50. or 2021.58.

2021.53. Retaining disc with countersunk head cap screw, DIN 9825/ ISO 9182-4

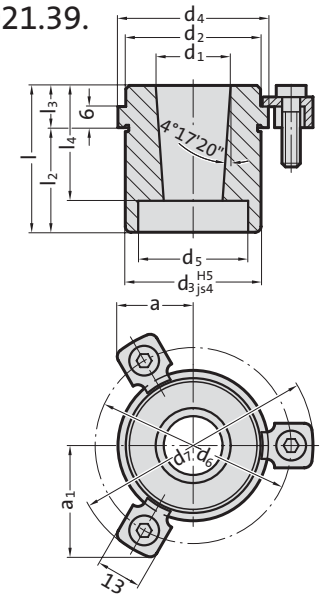
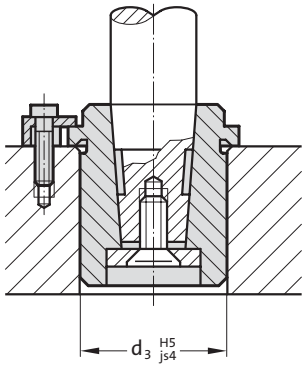
Retaining bush for guide pillar conical 2021.50., DIN 9825/ISO 9182-4

2021.39.



Mounting example



Material:

16 MnCr5,
case hardened 58 ± 2 HRC
Hardness penetration: ≥ 0,8 mm

Execution:

Retaining bore, outside diameter and shoulder precision ground.

Note:

Outside diameter d_3 same as that of guide bushes 2081. and 2091.
The attachment is with 3 Screw clamp, from Ø d_1 = 38 with 4 Screw clamp , which are included in delivery (Order No: 207.45 - Screw clamp incl. socket cap screw DIN 6912, Head Ø 13).
Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.

Material:

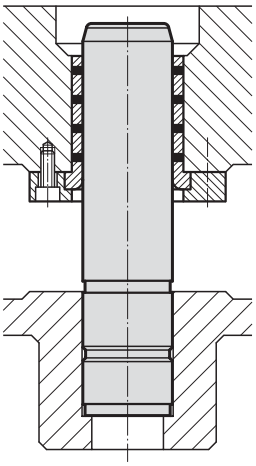
Spring strip steel

Note:

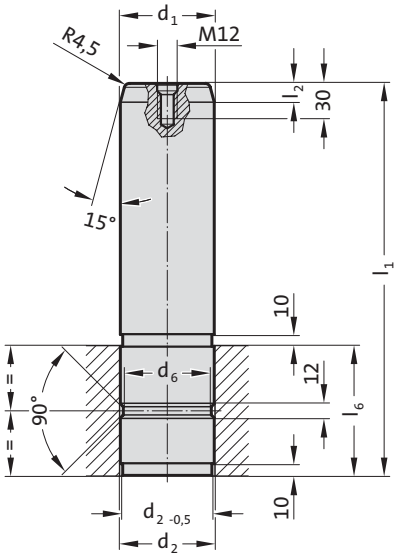
For securing guide pillars 2022.12. and 2022.16.

Guide pillar with groove, to CNOMO

Mounting example



2022.16.45.



Material:

Steel, surface hardened
Surface hardness: 60 + 3 HRC, Hardness penetration 2 + 1,6 mm

Execution:

precision ground

Note:

Fit for receiving bore H7.
Guide pillar is recommended to be used only with guide elements with solid lubricant.
Matching guide combinations, see selection matrix at the beginning of chapter D.

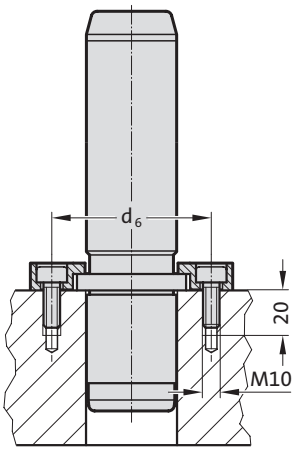
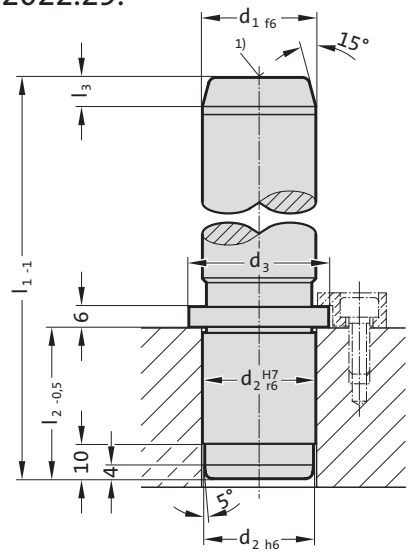
GUIDE PILLAR WITH COLLAR, TO WDX

Mounting example



2022.29.



Material:

Steel, surface hardened
Surface hardness: 60 + 4 HRC, Hardness penetration 1,5 + 1 mm

Execution:

precision ground
Method of manufacturing entails that centre holes are not concentric with O.D.
1) from Ø d_1 = 80 - with thread M12x18 deep

Note:

Guide pillar is recommended to be used only with guide elements with solid lubricant.
☞Matching guide combinations, see selection matrix at the beginning of chapter D.

☞Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.
Order No. for guide pillar with collar, to WDX, with screw clamps: 2022.29.□□□.□□□.A

Fixing:

(to be ordered separately)
Screw clamps with screws 2072.46 (M10 x 20 DIN EN ISO 4762)
up to Ø d_1 = 50 - 2 screw clamps
from Ø d_1 = 63 - 3 screw clamps

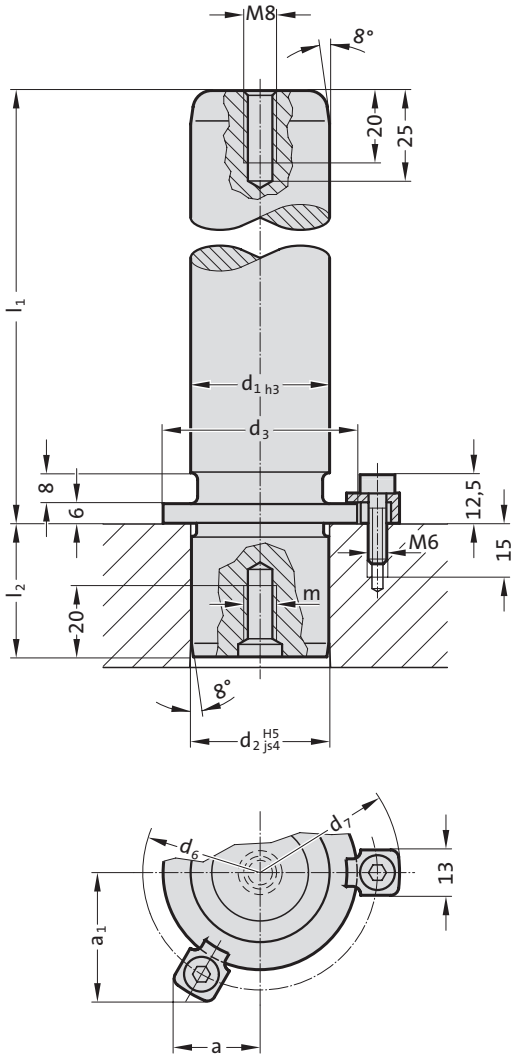
GUIDE PILLAR WITH COLLAR, SCREW CLAMP RETENTION, DIN 9825/~ISO 9182-5

2021.46.



Description:
Demountable pillars with shoulder are suited to applications where die sharpening requires dismantling and re-fitting.

Material:
Steel, (Core strength: ≥ 900 N/mm²) surface hardened
Surface hardness: 60 + 3 HRC, Hardness penetration ≥ 1,8 mm

Execution:
fine precision ground
Method of manufacturing entails that centre holes are not concentric with O.D.

Note:
The attachment is with 3 Screw clamp, from Ø d_1 = 38 with 4 Screw clamp , which are included in delivery (Order No: 207.45 - Screw clamp incl. socket cap screw DIN 6912, M6x20, Head Ø 13).
Optionally, it is also possible to fix it with a central screw connection 2021.43. or supporting ring 2021.45. (order separately).
☞Bearing clearance / Preloading see pairing classification at the beginning of chapter D.
☞Matching guide combinations, see selection matrix at the beginning of chapter D.
☞Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.
Tolerance range:
yellow = .10
green = .20
red = .30

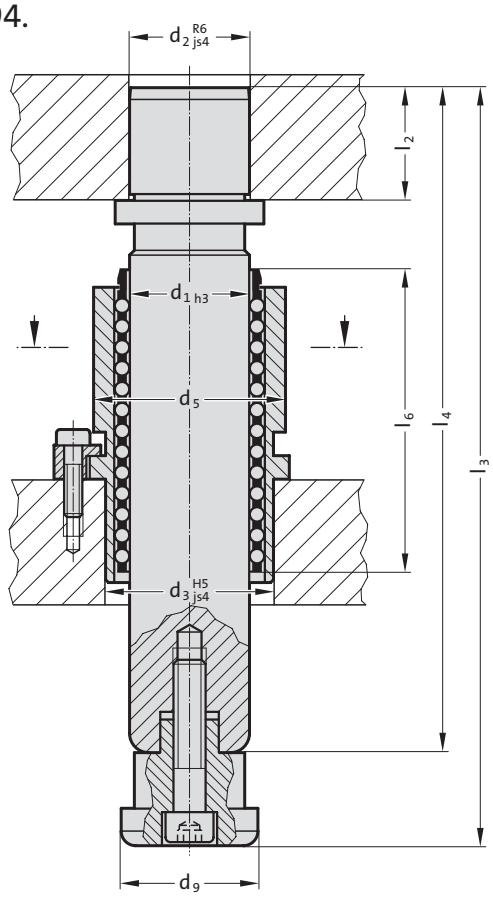
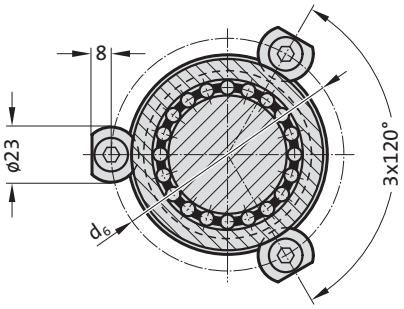
Ball guide unit to Mercedes-Benz Standard

2025.94.





Material:

Demountable guide pillar: Steel, surface hardened
Guide bush: Tooling steel
Cage retainer: Steel
Ball cage: Brass

Execution:

Ball guide unit 2025.94. consisting of: Demountable guide pillar, guide bush, ball cage, cage retainer, clamps and socket cap screws to DIN EN ISO 4762.

2025.94. Ball guide unit to Mercedes-Benz Standard

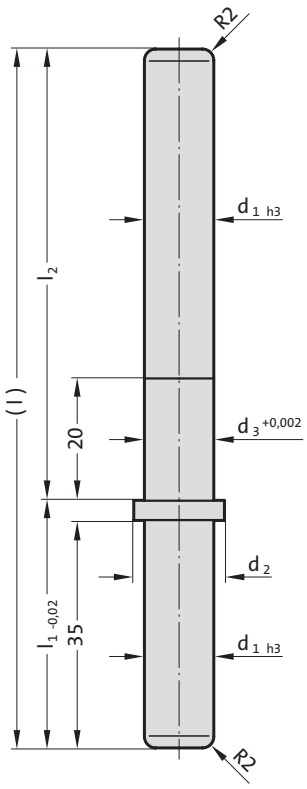
Guide pillar with collar

202.61.



Description:
On small modular die sets the combination plastic ball cage 206.41./ collared guide pillar 202.61. has indeed been successful for several years.

Material:
Steel, surface hardened
Surface hardness: 60 + 4 HRC, Hardness penetration 1 ± 0,2 mm

Execution:
precision ground

Note:
For use with ball cage 206.41. and guide bushes 2062.44.012. or 2061.44.15.

202.61. Guide pillar with collar

206.41.015.030.063	15	63	3
206.41.015.030.071	15	71	3

Description:

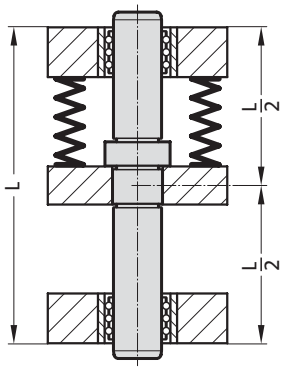
Owing to its much lower inertia, the plastic ball cage of particular advantage in die sets operating at stroking speed of 1000 SPM and more.
The phenomenon of ball-drag at the reversal point of cage travel, set up by the cage inertia, no longer occurs. The negative influence of this drag is eliminated – and so are the wear symptoms associated with it.
On small modular die sets the combination plastic ball cage 206.41./ collared guide pillar 202.61. has indeed been successful for several years.

Material:

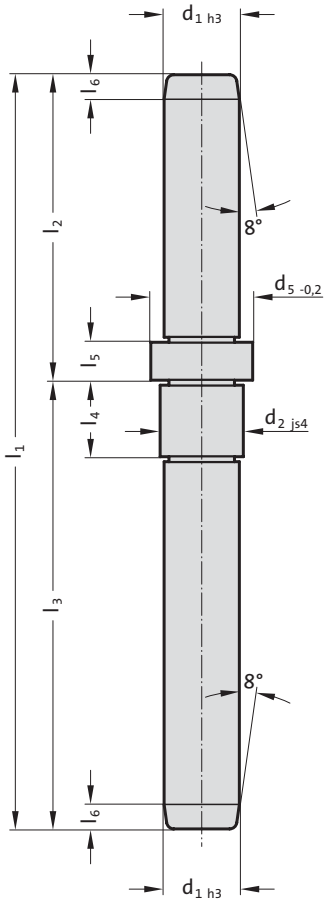
Cage: Plastic tube (Polyacetal - POM)
Balls: Steel hardened DIN 5401- Quality Class 1

Demountable guide pillar with centre fixing

Mounting example



2020.63.



Material:
Steel, surface hardened
Surface hardness: 62 + 2 HRC, Hardness penetration 1 ± 0,2 mm

Execution:
precision ground

Note:
For press fit into register bore N5.
Bending equation see at the beginning of chapter D.
Matching guide combinations, see selection matrix at the beginning of chapter D.

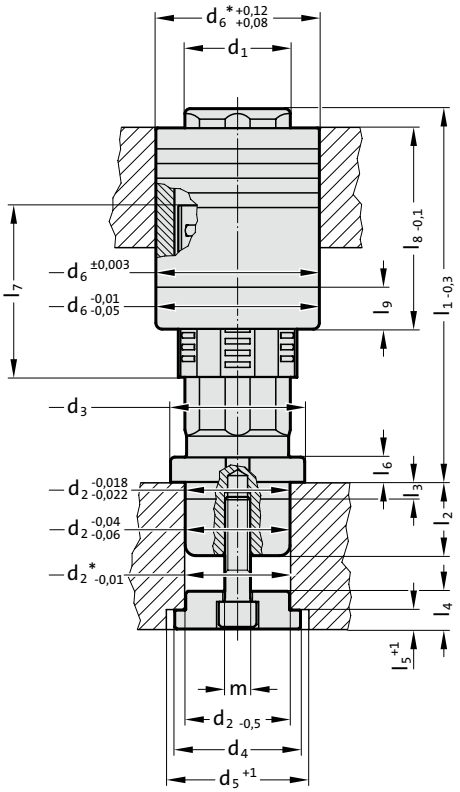
GUIDE UNIT WITH COLLAR MILLION GUIDE

2024.94.



Description:
FIBRO Million Guide guide units are used wherever rigidity, robustness and a precision guide function is required.
The large supporting surface of the needle rollers ensures these properties.
For stroke speeds up to 50 m/min and temperatures up to 80°C.

Material:
Needle roller cage: Plastic
Needle rollers: Steel, hardened
Guide bush: Tool steel alloy, hardened, 60 ± 2 HRC
Guide pillar: Tool steel alloy, hardened, 60 ± 2 HRC
Disk: Steel

Execution:
Guide unit consisting of a paired guide pillar and guide bush, needle roller cage and disk for fixing the guide pillar. The fixing screw (2192.10./12.) is ordered separately as the screw required depends on the thickness of the base plate.

Guide pillar and bushes are executed at:
ø 16 with 4 running surfaces
ø 12, ø 20 - ø 60 with 6 running surfaces
ø 80 with 8 running surfaces

Note:
Install guide unit in accordance with the instructions.
Guide bush must be bonded.

* Mounting bore

Only the needle roller cage part is replaceable. For order number for needle roller cage spare part, see table.

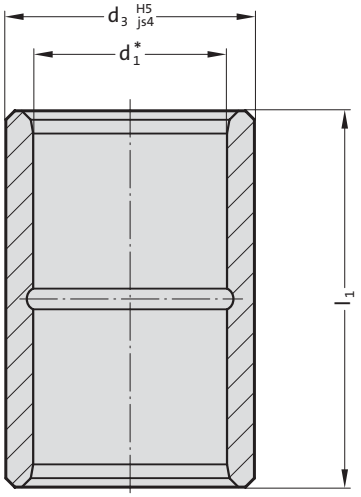
Guide bush, sintered ferrite carbonitrided with long-term lubrication, ISO 9448-2

2051.32.



Material:
Sintered ferrite of high purity, carbonitrided, long-term lubrication

Execution:
Bearing surfaces and outside diameter precision ground.

Slip-Fit Bonding:
The position of the bearing is given by push fit holes tolerance H5. The adhesive (order no. 281.648) provides optimum push retention whilst offering the following **advantages:**
- high accuracy and stiffness
- no problems to find position when changing bushings

We do not recommend to press fit for the same reasons mentioned above.

Note:
Notes on sliding type guides at the beginning of chapter D.
*Bearing clearance see pairing classification at the beginning of chapter D.
Matching guide combinations, see selection matrix at the beginning of chapter D.
Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.
Ø 8 - Ø 12 not available in tolerance range red = .30.
Tolerance range:
yellow = .10
green = .20
red = .30

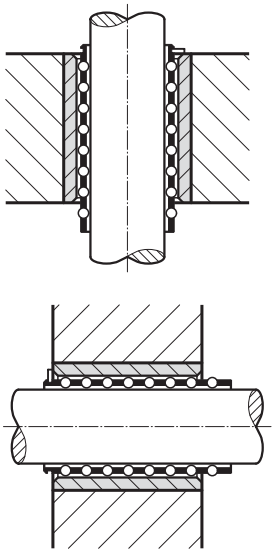
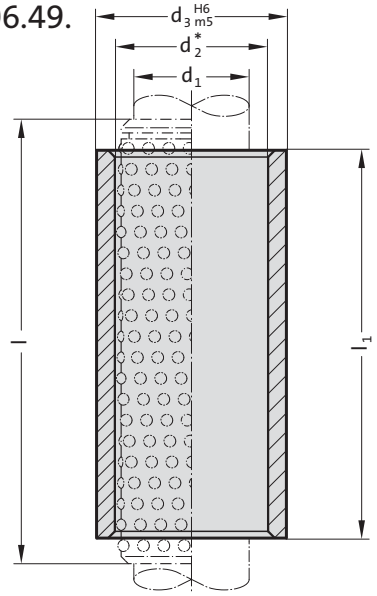
Classification TOL	yellow	=				10
Order No		=	2061.44.	008.	030.	10

Guide bush for ball bearing, AFNOR

Mounting example



206.49.



Material:
Tool steel, hardened 62 ± 2 HRC

Execution:
Bearing surfaces honed,
outside diameter precision ground.

Slip-Fit Bonding:
The position of the bearing is given by push fit holes tolerance H6. The adhesive (order no. 281.648) provides optimum push retention whilst offering the following **advantages:**
- high accuracy and stiffness
- no problems to find position when changing bushings

We do not recommend to press fit for the same reasons mentioned above.

Note:
Notes on ball bearing type guides at the beginning of chapter D.
*Preloading see pairing classification at the beginning of chapter D.
Matching guide combinations, see selection matrix at the beginning of chapter D.
Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.
Tolerance range:

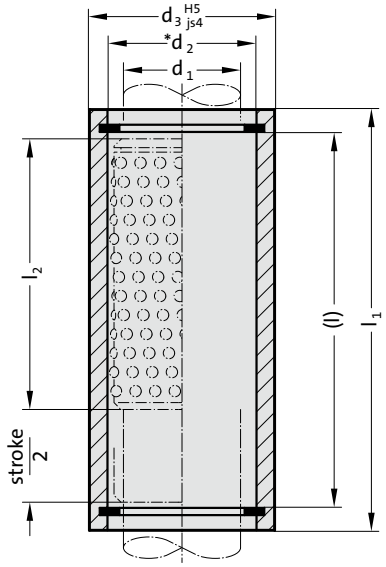
GUIDE BUSH FOR BALL BEARING, WITH STROKE LIMITATION

2061.47.



Material:
Tool steel, hardened 62 ± 2 HRC

Execution:
Bearing surfaces honed,
outside diameter precision ground.

Slip-Fit Bonding:
The position of the bearing is given by push fit holes tolerance H5. The adhesive (order no. 281.648) provides optimum push retention whilst offering the following **advantages:**
- high accuracy and stiffness
- no problems to find position when changing bushings

We do not recommend to press fit for the same reasons mentioned above.

Note:

Nominal order length for ball cage l	80 mm	=	080.
Slot length l_3	51 mm	=	051
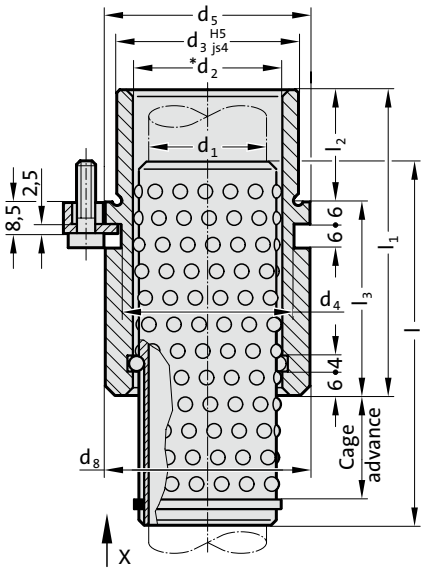
Order No		=	2060.65. 038. 080. 051

Headed guide bush with ball cage retainer

2081.67.



Material:

Bush: Tool steel
Hardness: 62 ± 2 HRC
Cage: Brass
Balls: Steel hardened (DIN 5401)

Note:

Ball cage position - please specify the required cage advance with order.
FIBRO Ball Cage Retainers ensure optimum starting position of ball cages on inverted die sets - even if pillars retract from guide bushes. The application determines the cage advance. Note that cage travel is half the stroke length.
In this context it is of importance to note the minimum constructional length.
The cage advance should be chosen so that during normal operation of the tool, optimum position is achieved.
The attachment is with 3 Screw clamp, from Ø d_1 = 38 with 4 Screw clamp , which are included in delivery (Order No: 207.45 - Screw clamp incl. socket cap screw DIN 6912, Head Ø 13).
*☞ Preloading see pairing classification at the beginning of chapter D
☞ Matching guide combinations, see selection matrix at the beginning of chapter D.
Tolerance range:
yellow = .10; green = .20; red = .30

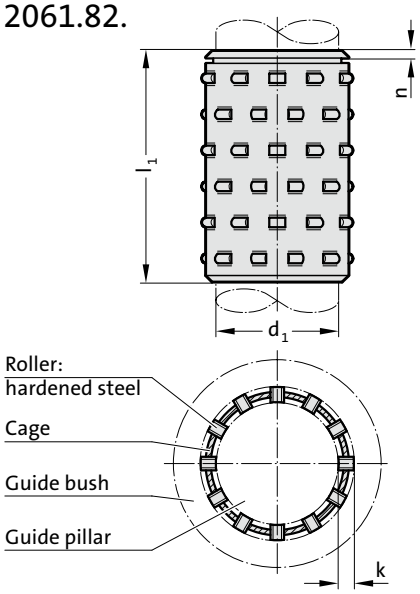
Roller cage with circlip groove, Brass

2061.82.



Description:

Roller cages make linear contact with the guide bush and the guide pillar. This results in a load carrying capacity for each individual roller which is many times that of a ball of the same diameter. Roller bearings feature a FIBRO specific seal, similar to the ball bearings. The profile rollers are arranged in a spiral layout axially, so that every roller has its own path. The cages are grooved to accept a DIN 471 (206.72.) circlip.

Material:

Roller Cage: Brass
Rollers: Steel hardened, 100 Cr6, DIN 5402

Note:

☞ Preloading see at the beginning of Chapter D
For roller cages use only pairing class guide pillar red = .30 and guide sleeve yellow = .10.

2061.82. Roller cage with circlip groove, Brass

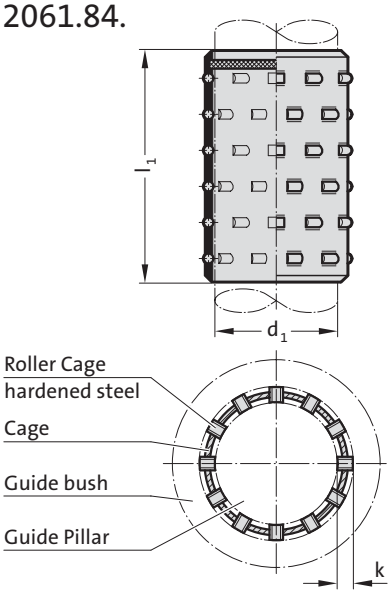
Roller cage with assembly aid, Brass

2061.84.



Description:

Roller cages make linear contact with the guide bush and the guide pillar. This results in a load carrying capacity for each individual roller which is many times that of a ball of the same diameter. Roller bearings feature a FIBRO specific seal, similar to the ball bearings. The profile rollers are arranged in a spiral layout axially, so that every roller has its own path.

Material:

Roller Cage: Brass
Rollers: Steel hardened, 100 Cr6, DIN 5402

Note:

No assistant is needed for their assembly. These cages are equipped with a suitably positioned brake ring insert. That ensures equal cage spacing especially on die sets with multiple pillars.
Preloading see at the beginning of Chapter D.
For roller cages use only pairing class guide pillar red = .30 and guide sleeve yellow = .10.

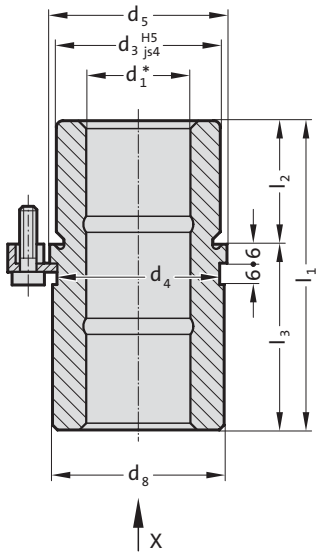
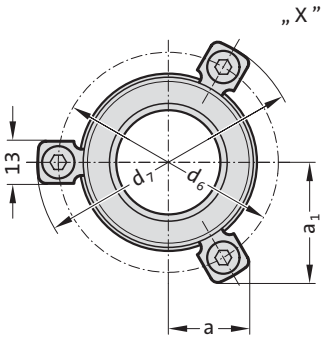
Headed guide bush, sintered ferrite carbonitrided with long-term lubrication, ISO 9448-6		=	2081.31.
Guide diameter d_1	19 mm	=	019.
Classification TOL	yellow	=	10
Order No		=	2081.31. 019. 10

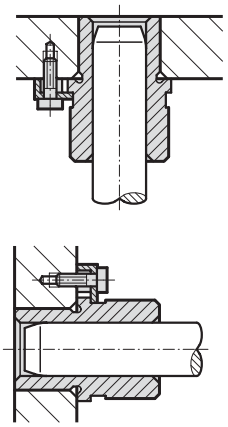
Headed guide bush, sintered ferrite carbonitrided with long-term lubrication, ISO 9448-6

2081.32.





Mounting example



Material:

Sintered ferrite of high purity, carbonitrided, long-term lubrication

Execution:

Bearing surfaces and outside diameter precision ground.

Note:

The attachment is with 3 screw clamps, from Ø d_1 = 38 with 4 screw clamps, which are included in delivery (Order No: 207.45 - screw clamp incl. socket cap screw DIN 6912, Head Ø 13).
Notes on sliding type guides at the beginning of chapter D.
*Bearing clearance see pairing classification at the beginning of chapter D.
Matching guide combinations, see selection matrix at the beginning of chapter D.
Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.
Tolerance range:
yellow = .10
green = .20
red = .30

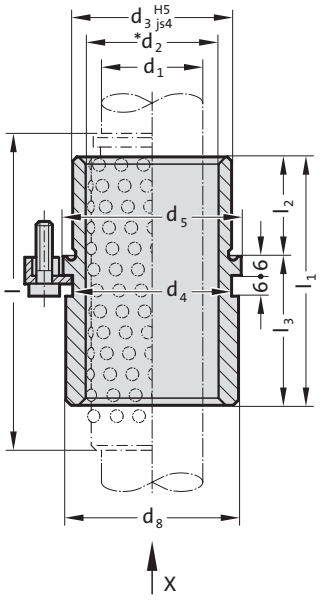
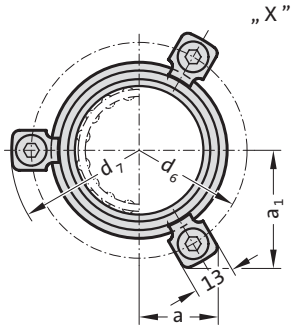
Headed guide bush for ball bearing, ISO 9448-7		=	2081.45.
Guide diameter d_1	24 mm	=	024.
Classification TOL	yellow	=	10
Order No		=	2081.45. 024. 10

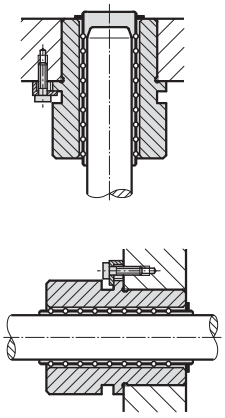
Headed guide bush for ball bearing, ISO 9448-7

2081.46.





Mounting example



Material:

Tool steel, hardened 62 ± 2 HRC

Execution:

Bearing surfaces honed,
outside diameter precision ground.

Note:

The attachment is with 3 screw clamps, from Ø d_1 = 38 with 4 screw clamps, which are included in delivery (Order No: 207.45 - screw clamp incl. socket cap screw DIN 6912, Head Ø 13).
Notes on ball bearing type guides at the beginning of chapter D.
*Preloading see pairing classification at the beginning of chapter D.
Matching guide combinations, see selection matrix at the beginning of chapter D.
Ball guide capacity calculations at the end of chapter D.
Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.
Tolerance range:
yellow = .10
green = .20
red = .30

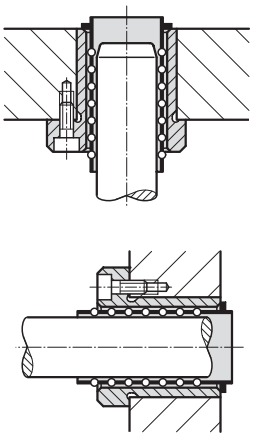
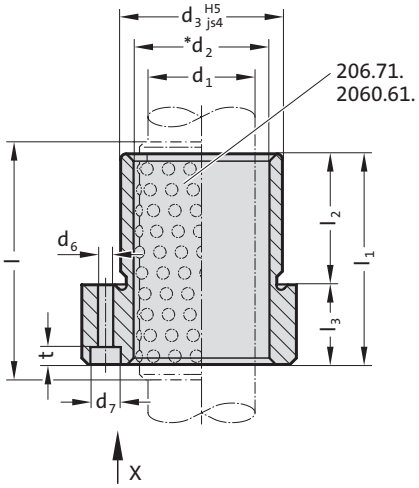
Order No		=	2091.44. 019. 10

Flanged guide bush for ball bearing, ISO 9448-5

Mounting example 2091.45.





Material:
Tool steel, hardened 62 ± 2 HRC

Execution:
Bearing surfaces honed,
outside diameter precision ground.

Note:
The guide bush is fixed by means of 3 srews up to ø 16: with screws to DIN 6912, from ø 19: with screws to DIN EN ISO 4762.
The screws are not contained in the scope of delivery.
Notes on ball bearing type guides at the beginning of chapter D.
*Preloading see pairing classification at the beginning of chapter D.
Matching guide combinations, see selection matrix at the beginning of chapter D.
Ball guide capacity calculations at the end of chapter D.
Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.
Tolerance range:

Oilless Guide Elements

Oilless guide elements
General description

Low-maintenance sliding elements are used in the tool & die building as well as the machine building industries, for both linear and rotary motion applications. The material for these sliding elements is made of a base material (see chart), and an overlapping network of solid lubricant deposits. These deposits are embedded in a uniform geometric pattern in order to achieve the optimum lubrication coverage in the direction of the movement. The allowable directional movements can be found on the catalog pages, and are marked with symbols.

The optimum sliding conditions are achieved when the sliding elements are combined with a hardened and ground opposing surface, which are a minimum of 100 HB harder than the base material. A surface roughness of approx. Rz6.3 is optimal. Suitable product combinations of guide pillars and low-maintenance guide bushings can be found in the selection matrix at the beginning of chapter D.

It is recommended to lightly lubricate the sliding surfaces of the low-maintenance sliding elements with lithium saponified grease, before usage. The solid lubricant will only be distributed from the spots in the sliding zone during operation. In general, 25-35 % of the sliding surface is embedded with solid lubricant deposits, but deviations are possible due to the shape and size of a particular component. The size and arrangement of the solid lubricant deposits may also vary within the various products and sizes.

A repair of the slide elements is possible. The sliding surface is usually re-ground.

Characteristics for base material

chemical composition	Cu 60–66% Al 5,0–7,5% Fe 2,0–4,0% Mn 2,5–5,0% Zn 17,5–31,5%
specific density kg/dm³	8,2
tensile strength Rm N/mm²	750-800
Brinell hardness HB 10	180–210
yield limit Rp 0,2 N/mm²	450–550
elongation to fracture A5 %	5–8
modulus of elasticity kN/mm²	105–115
co-efficient of friction	0,04–0,15
temperature conductance W/(m × K)	45–55
co-efficient of thermal expansion /°C	1,6–2,0 × 10 $^{-5}$
electric conductance m/(Ω × mm²)	7–8
alt. flexural strength N/mm²	±150
ratio sliding surface to lubricant deposits (%)	25–30

Advantages of oilless guide elements

- Low-maintenance, with optimum conditions maintenance-free
- low friction
- good emergency sliding properties
- „Stick - Slip“ effects are eliminted
- extremely wide temperature resistance – hot and cold
- damping properties in presence of vibration

Specials

Rebuilds and other specifications and designs upon request.

Surface pressure, temperature, speed and lubrication

Surface pressure max. (N/cm²)	Temp. (C°)	Speed (m/min.)	PV value (N/cm² × m/min)	Lubrication
5000	80	30	10000	Initial

PV value

The permissible bearing load is determined from the pressure and the PV value, which defines the bearing wear.

The PV value is the product of surface pressure (P) and running velocity (V).

Please keep in mind, that the maximum allowed speed and surface pressing can not be reached at the same time (see PV diagramm)

Calculation for the existing bushing load:

PV = P × V (N/cm² × m/min.)

P = F/A (N/cm²)

F = loading force (N)

A = Projection surface of the guide bushing/sliding surface [cm²]

V = Sliding speed [m/min]

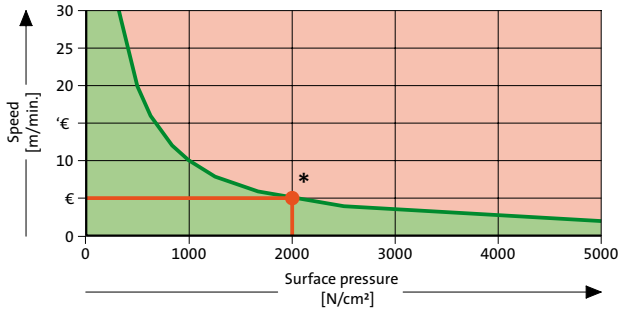
Sliding speed with lifting motion:

V = 2 × H × nf/1000 [m/min]

H = Stroke [mm]

nf = Number of strokes [H/min]

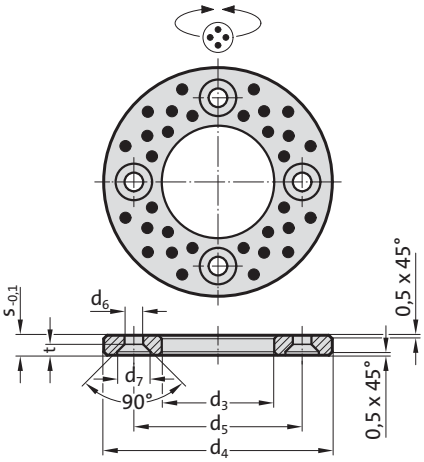
PV-diagramm



* Example: At a surface pressing of 2000 N/cm² is, because of the maximum PV-value of 10000 N/cm² x m/min. the maximum allowed speed € m/min.

Thrust washer, Bronze with solid lubricant

2053.70.



Material:
Bronze with solid lubricant, oilless lubricating

Note:
For combination loads use together with Bushes 2052.70.
Screws not included.

Fixing:
from d_3 = 10,2 2 X M3
from d_3 = 20,2 2 X M5
from d_3 = 40,2 2 X M6
from d_3 = 50,3 4 X M6
from d_3 = 60,3 4 X M8
from d_3 = 90,5 4 X M10

2053.70. Thrust washer, Bronze with solid lubricant

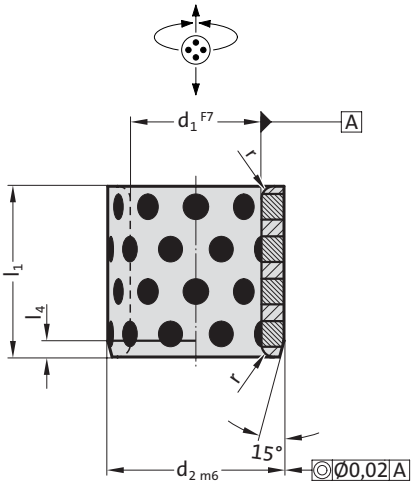
Guide bush, Bronze with solid lubricant

2052.70.



Material:
Bronze with solid lubricant, oilless lubricating

Note:
Bushes can be used with radial or axial motion.
Matching guide combinations, see selection matrix at the beginning of chapter D.
Assembly guide lines / Dimensional requirements and tolerances at the end of chapter D.

Attention:
Note that press fitment reduces inside bush diameter.

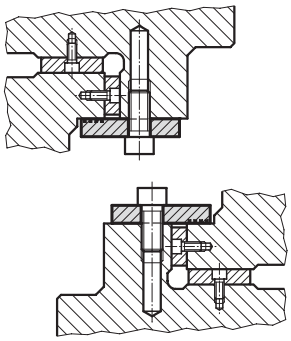
Mounting example



Material:

Bronze with solid lubricant, oilless lubricating

Note:

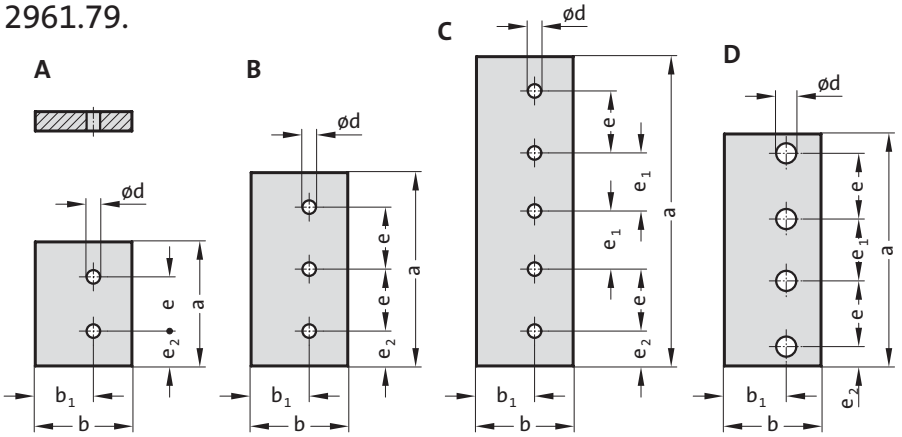
Screws are not included.

Fixing:

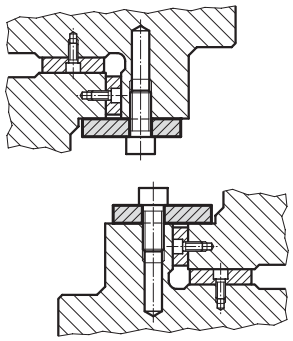
Use socket cap screws DIN EN ISO 4762.

Retaining plate, Steel, VDI 3357

2961.79.



Mounting example



Material:
Steel, surface hardened

Note:
Screws are not included.

Fixing:
Use socket cap screws DIN EN ISO 4762.

2961.79. Retaining plate, Steel, VDI 3357

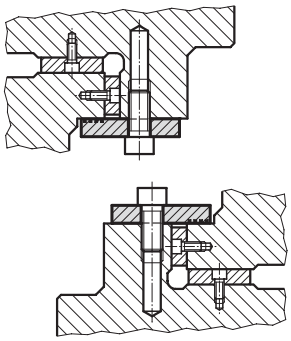
Mounting example



Material:

Steel, surface hardened. Sliding faces with embedded solid lubricant.

Note:

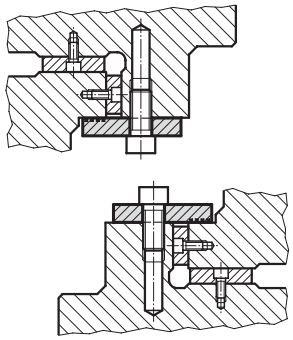
Screws are not included.

Fixing:

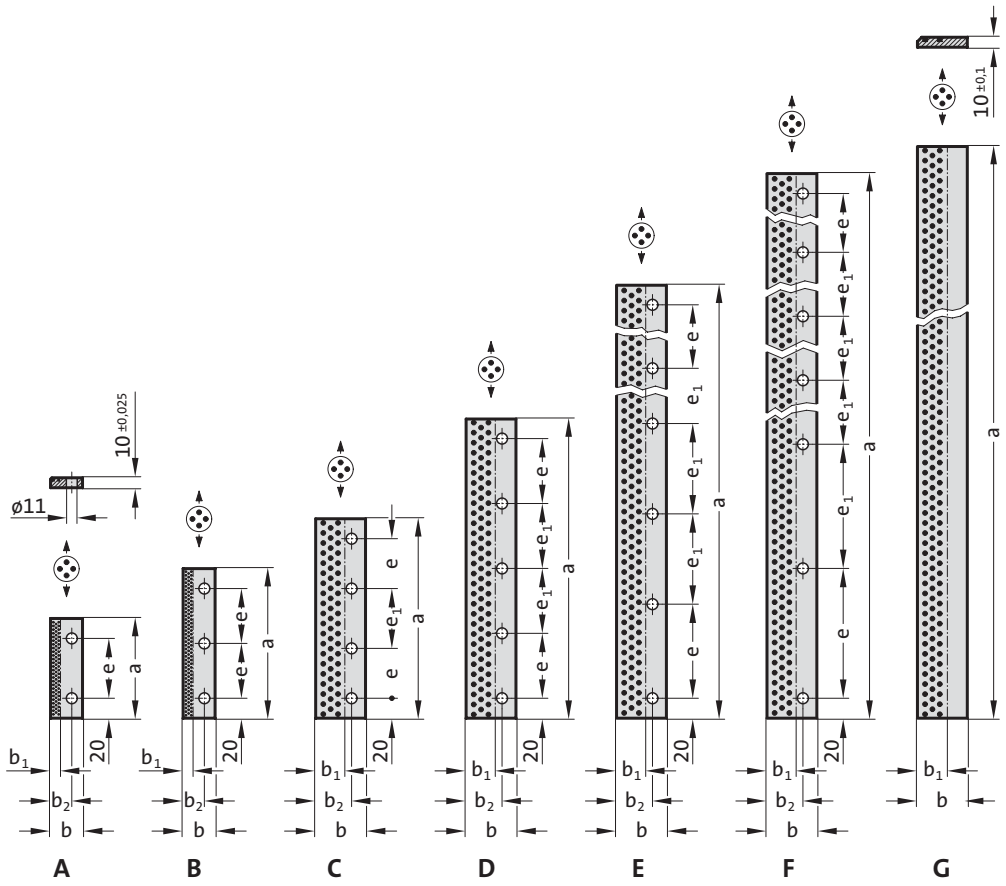
Use socket cap screws DIN EN ISO 4762.

Retaining plate, Bronze with solid lubricant

Mounting example



2961.78.



Material:
Bronze with solid lubricant, oilless lubricating

Note:
Screws are not included.

Fixing:
Use socket cap screws DIN EN ISO 4762 M10.

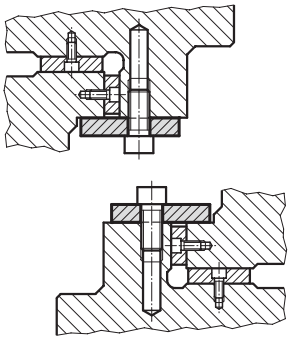
Material:
Steel, surface hardened. Sliding faces with embedded solid lubricant.

Note:
Screws are not included.

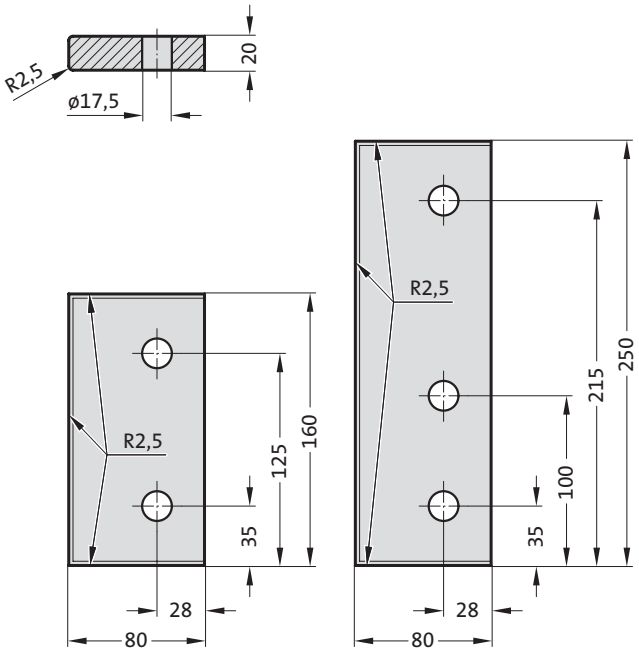
Fixing:
Use socket cap screws DIN EN ISO 4762 M16.

Retaining plate, Steel, CNOMO

Mounting example



2961.79.45.



Material:
Steel, surface hardened

Note:
Screws are not included.

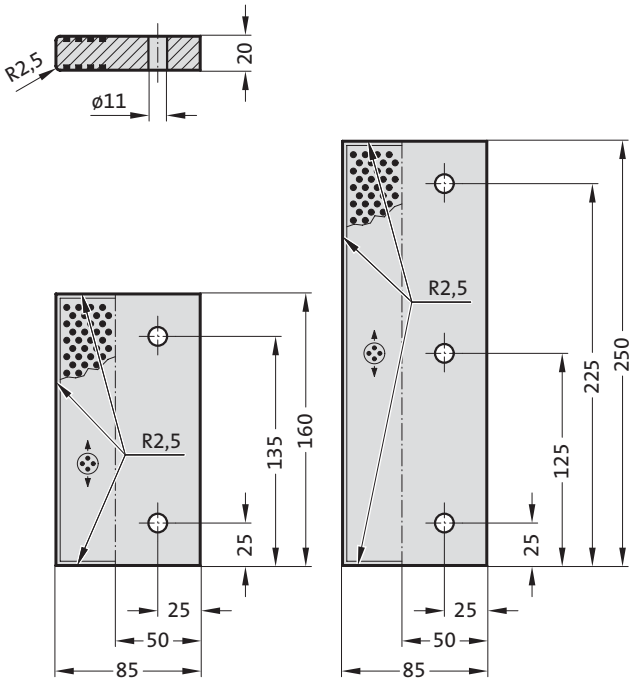
Fixing:
Use socket cap screws DIN EN ISO 4762 M16.

2961.79.45. Retaining plate, Steel, CNOMO

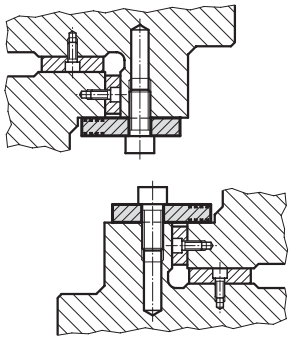
Order No	Number of screw holes
2961.79.45.080.20.160	2
2961.79.45.080.20.250	3

Retaining plate, Bronze with solid lubricant, CNOMO

2961.81.45.



Mounting example



Material:
Bronze with solid lubricant, oilless lubricating

Note:
Screws are not included.

Fixing:
Use socket cap screws DIN EN ISO 4762 M10.

2961.81.45. Retaining plate, Bronze with solid lubricant, CNOMO

Order No	Number of screw holes
2961.81.45.085.20.160	2

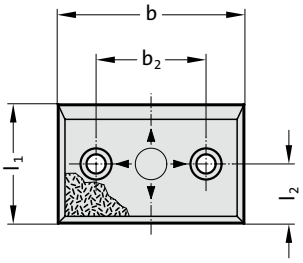
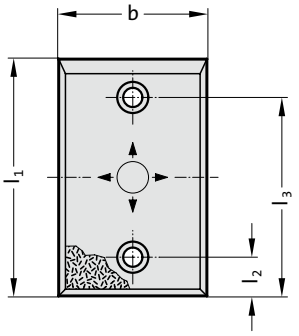
SLIDING PAD, STEEL WITH SINTERLAYER, VDI 3357

2960.30.

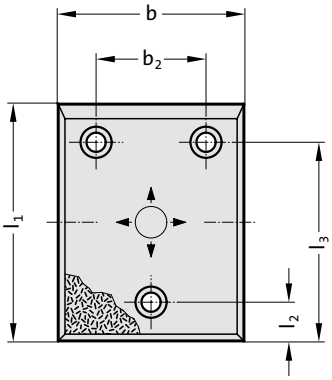
D



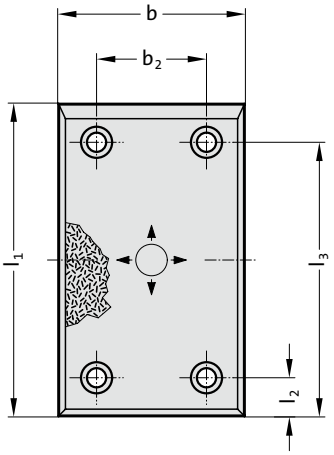
B



G



H



Description:
Steel with sinterlayer is a two-layer material. It ensures low maintenance, selflubricating service even in arduous multishift applications.

Material:
Steel plate with sinterlayer,
part of lubricant 20-25%.

Note:
Screws are not included.

Fixing:
Use socket cap screws DIN EN ISO 4762.

2960.30.

Sliding pad, Special cast iron (GG25) with solid lubricant, AFNOR/ISO 9183-2

Description:
Special cast iron with solid lubricant is a low-cost alternative, altthough absorption of the surface pressure is reduced by 60%.

Material:
Special cast iron (GG25) with solid lubricant.

Note:
Screws are not included.

Fixing:
Use socket cap screws DIN EN ISO 4762 M10.

Description:

Using locating holes components, assemblies and tools can be repeatedly centred with high precision on processing machines, measuring equipment and tool components.

Material:

Steel, hardened

Note:

Screws are not included.
1) to BMW standard
2) to VW standard

Fixing:

Use socket cap screws DIN EN ISO 4762 M6/M8.

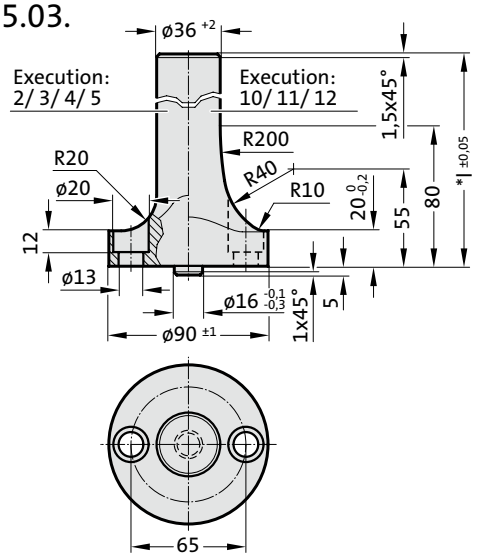
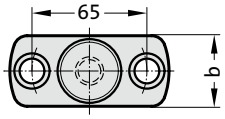
PRESSURE BOLT WITH BASE, ACCORDING TO VW

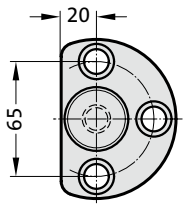
2446.10.55.03.



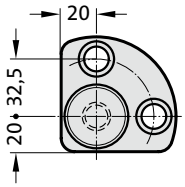
2446.10.55.02. / 2446.10.55.10. / 2446.10.55.11.



2446.10.55.04.



2446.10.55.05. / 2446.10.55.12.



Description:
Pressure bolts with base are used to transfer force from the pressure cushion of the press to the tool.

Material:
C45 (1.0503), heat-treated 800 - 1000 N/mm²

Execution:
drop-forged

Note:
Screws are not included.

2446.10.55. Pressure bolt with base, according to VW

Order No	Shape	b	l*	Gradation

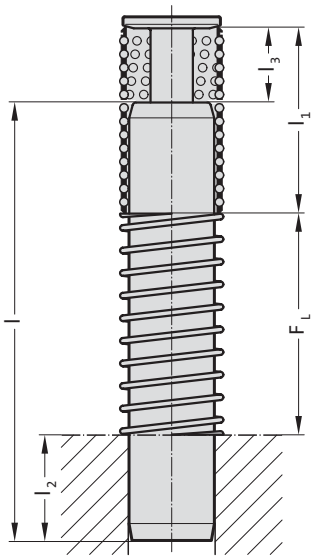
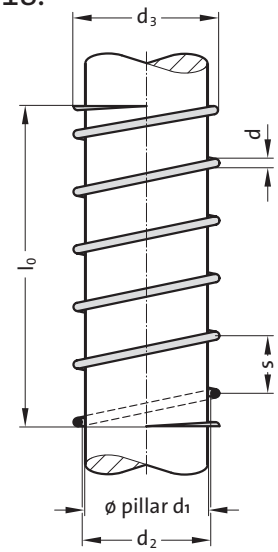
Helical spring for ball cage retention



241.18.



Calculation:

Formula for selecting spring 241.18.:
$F_L = [l - (l_2 + (l_1 - l_3))] \times 1{,}1$
Formula for calculating the block length L_{BL} of the selected spring:
$L_{BL} = (l_0 \times d : s) + 2 \times d$
F_L = Length of compressed spring
l = Length of guide pillar (Customer specified)
l_1 = Cage length (Customer specified)
l_2 = Compression length of guide pillar (Customer specified)
l_3 = Ball cage retainer size (Customer specified)
1.1 = Safety factor
l_0 = Length of uncompressed spring
d = Spring wire diameter
s = Pitch

241.18. Helical spring for ball cage retention

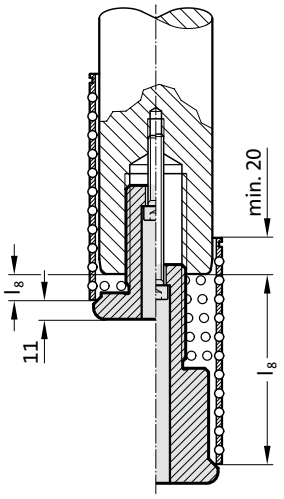
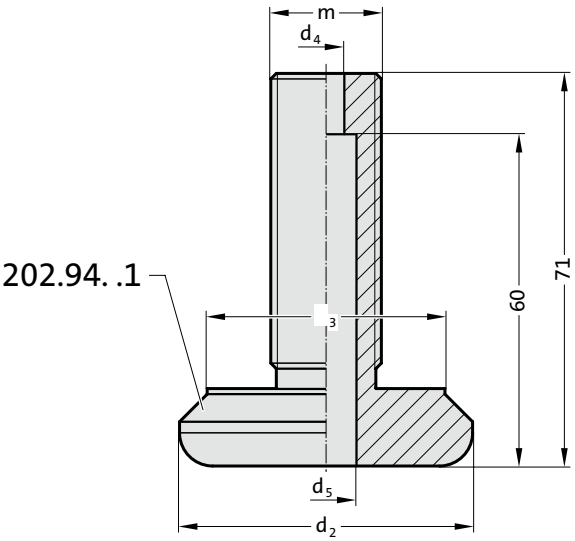
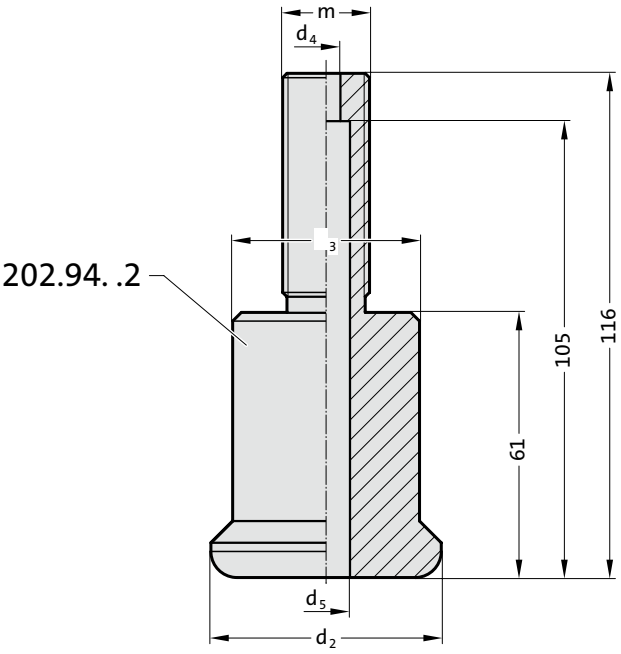
CAGE RETAINER

Mounting example



202.94.





Description:
Cage unit allows both accurate cage centring as well as a variably adjustable cage feed length (l_8). The cage feed length can be adjusted by turning the thread m in the column. A cheese head screw in accordance with DIN EN ISO 4762 serves as anti-rotation device.

Material:
Steel

Note:
The following guide pillars can be equipped with this cage retainer:
202.19. .30.94
2021.46. .30.94

Screws are not included.

Fixing:
Socket cap screws DIN EN ISO 4762 for nominal diameter ød :
32 / 40 = 2192.12.05.
50 = 2192.12.06.
63 / 80 = 2192.12.08.

Length calculation of the safety screw fastening :
Cage retainer 202.94. .1 : Screw length = Cage feed length + 25 mm
Cage retainer 202.94. .2 : Screw length = Cage feed length - 20 mm

202.94. Cage retainer

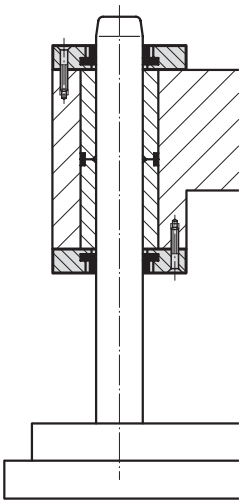
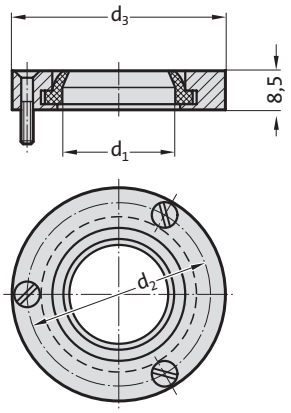
Pillar wiper

Mounting example



206.95.
2061.95.



Description:

FIBRO Pillar Wipers protect against premature wear caused by the ingress of dirt into the die set guides.
Outside diameters match boss dias. on FIBRO Die Sets (Cast Iron). They can be fitted onto the bolster, or into a counterbore – flush with the bolster surface.

Note:

Pillar Wipers will be delivered with 3 screws M 4 × 16 DIN 963.

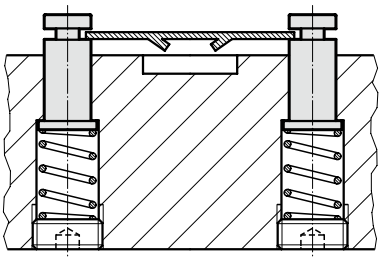
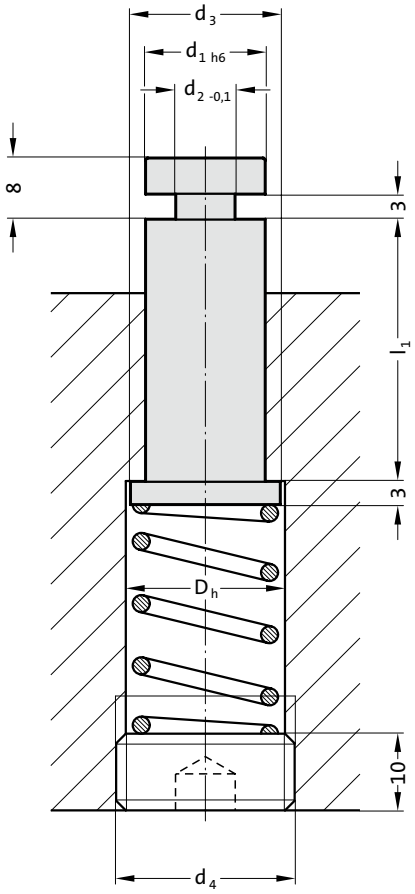
LIFTER PIN FOR PRESS TOOL STRIPS

Mounting example



244.00.2.



Description:
Combination progression dies with certain forming stages can be equipped advantageously with springloaded lifter pins. FIBRO Lifter Pins 244.00.2., available in four sizes, can be used to assume the double function of lifting and guiding the strip. The amount of lift is a function of the counterbo-re-depth.

Material:
No 1.7131, case-hardened

Execution:
ground

Note:
For ordering code of screw plug 241.00.1. and helical spring see spring range on pages chapter F.

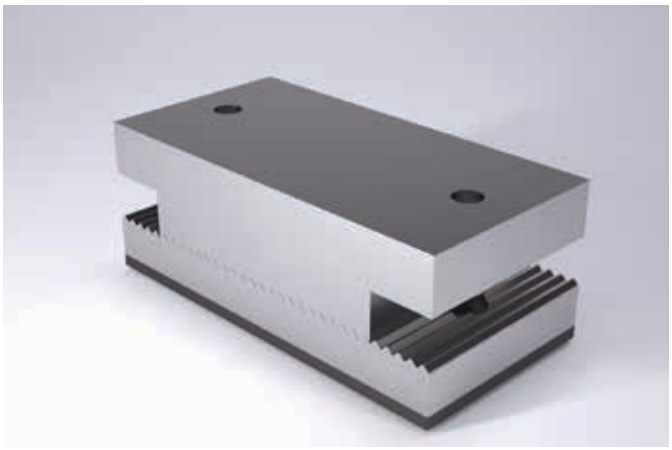
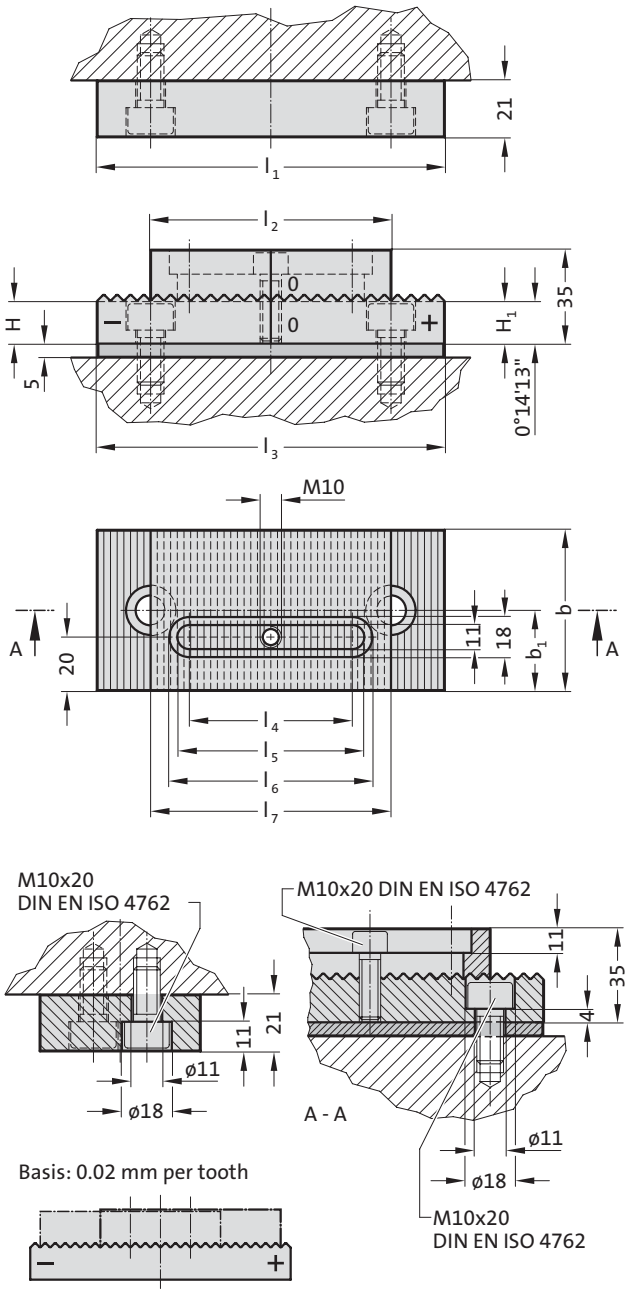
Spacer plate toothed, with adjusting plate



2444.12 / 2444.13



Material:
Spacer plates: X 210 Cr 12 (1.2080), hardened 58 + 2 HRC
Adjusting plate: X 153 CrMoV 12 (1.2379)

Description:
For spacing out sheet metal retainers in tools for external skin parts.

Note:
Screws are not included.

'0'= basic setting in the middle (grinding-in)
'+'= adjustment to the right - plus
'-' = adjustment to the left - minus

NB: Hole pattern
The bolsters are reversible.

Adjustment range:
2444.12
12 increments each of 0.02 mm means an adjusting range of 0.24 mm with a minimum support area of 80 x 60 mm.
2444.13
14 increments each of 0.02 mm means an adjusting range of 0.28 mm with a minimum support area of 100 x 80 mm.

2444.12 / 2444.13 Spacer plate toothed, with adjusting plate

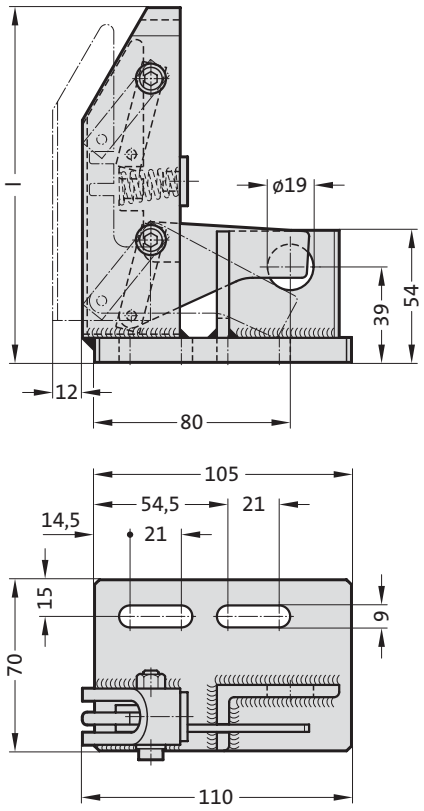
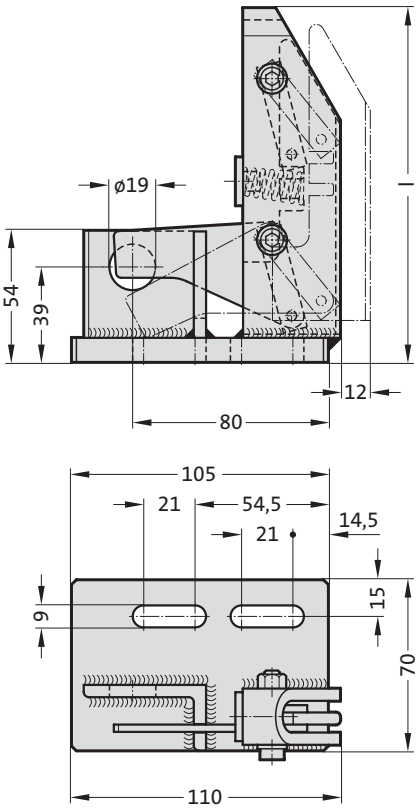
Position monitor for boards

2443.14.55.

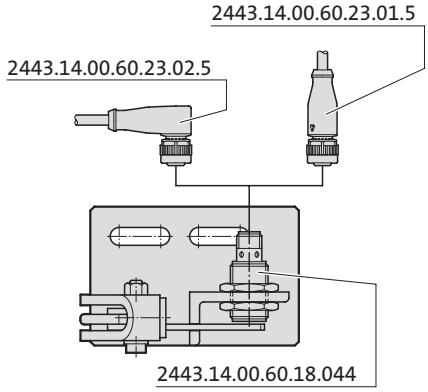
Shape A



Shape B



Mounting example



Material:

Steel

Note:

See following pages for accessories.

Attention:

At least two position monitors must be installed crosswise. In case of large parts, such as the side part, a third position monitor should be placed. The position monitors should be placed in such a way that a perfect querying of the sheet metal part is guaranteed. Position monitors should be arranged a minimum of 5 mm away from the pulling or locking bards and not within the range of strong sheet movement.

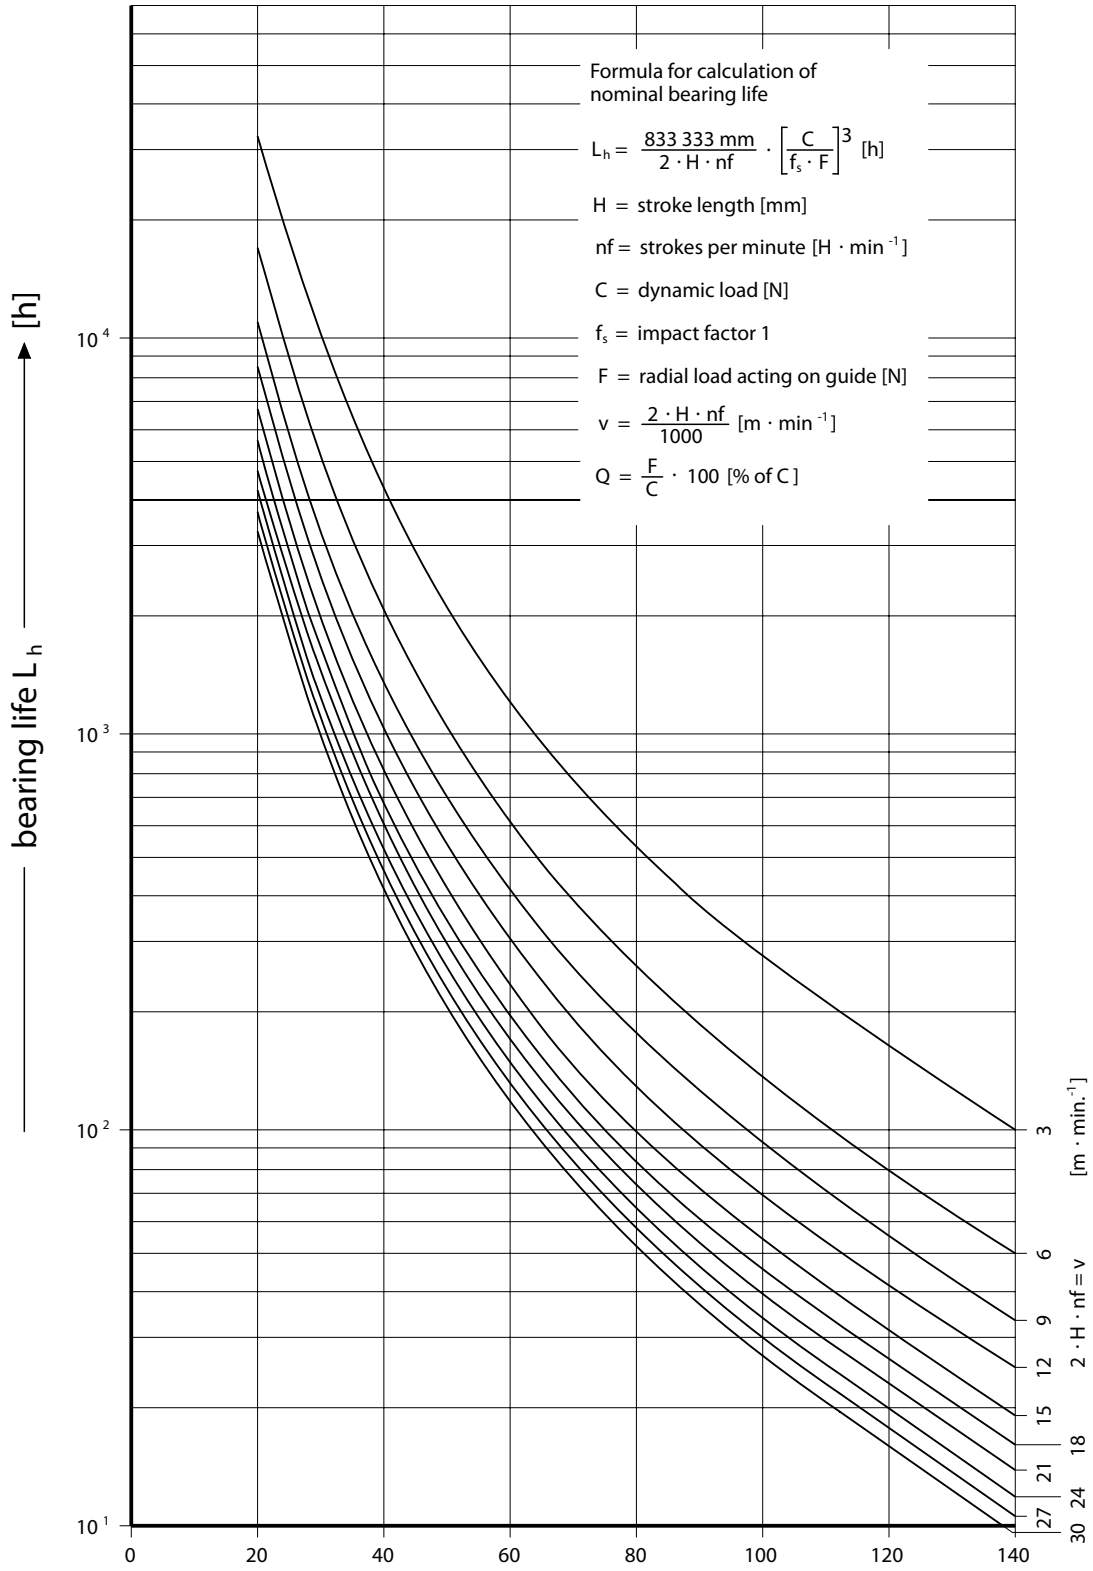
BALL GUIDES - LOAD DIAGRAM

Bearing life versus loading
Values shown are based on the Impact Factor of $f_s = 1$:
Application to normal conditions in respect of press and die set, with a maximum bearing temperature of 100 °C.



BALL GUIDES - CALCULATION TABLE
DYNAMIC LOAD FIGURES FOR BALL, BRASS OR ALUMINIUM

Definition:
The dynamic load index C in N constitutes a load with constant size and direction, at which 90 % of a sufficiently large quantity of equal bearings achieve a minimum of the service life of $+10^5$ m. This applies for solely longitudinal movement.

*Slip-Fit Bonding:

The glue-line gap must not be smaller than 0,005 mm, or the adhesive will be wiped off the contact surfaces upon fitment.
This would result in an unreliable bond.

The available component tolerances do not always result in the minimum glue-line gap.

This fact has to be born in mind when machining receiving bores, or alternatively corrections can be made on the assembly bench.

Ground Precision Components

Ground Precision Components

FIBRO Precision Components cover a very wide range of materials, shapes and sizes and thus permit virtually unrestricted selection even to highly individual requirements.

At Hassmersheim and also abroad, stock levels of Precision Components reach seven-digit figures. It is therefore quite likely that your particular choice will be available for immediate delivery. Should this not be the case then our flexible batch production schedules will ensure that delays are kept to a minimum.

Batch production in our interpretation not only spells prompt delivery but also exceptional quality. Starting with the arrival inspection of raw materials, every single manufacturing operation on FIBRO Precision Components is followed by a quality check. Lastly, an uncompromising final inspection of each and every part guarantees that the trade mark FIBRO is and remains synonymous with Quality.

In view of the fact that a large portion of the Precision Components programme consists of punches and matrices, the importance of alignment in the operational die must be emphasized. Unless this requirement can be met to a high degree of accuracy, even the finest efforts in design and in the toolroom must fail! Die alignment ultimately depends on the guides – FIBRO Die Sets and Guide Elements were developed and are made with this postulate in mind.

Tool life, production cost and work quality are to a large extent a function of tooling material selection versus strip stock characteristics and ancillary process conditions. A judicious choice from the wide range of materials for our punches and matrices will be facilitated by the orientation guide in this catalogue. Listing the principal characteristics of each material together with selection criteria, it is intended to help customers make the right choice.

Our experienced tooling specialists will assist you with further detailed information.

In keeping with the basic tenet of our firm, every effort is made to ensure that design, performance potential and quality of FIBRO Precision Components keep well abreast with latest technological developments.

FIBRO Punches and Matrixes – Description of Materials

WS = Alloy Tool Steel

Material No 1.2210, 1.2516, 1.2842 or similar.

Characteristics: Hard and tough tool steel, medium wear resistance.

Application Field: Piercing/blanking dies for mild steel, low carbon steels, non-ferrous metals, plastics, paper.

WS = **material code number = "1"**
e.g. Order No = 239.**1**. ...

HWS = High Carbon – High Chrome Tool Steel (12% Cr)

Material No 1.2436, 1.2379 or similar.

Characteristics: High resistance to wear.

Application Field: Piercing/blanking dies of all types, trim dies, for all carbon steels, alloy steels, non-ferrous metals, plastics, paper.

HWS = **material code number = "2"**
e.g. Order No = 260.**2**. ...

HSS = High Speed Steel

Material No 1.3343 or similar.

Characteristics: High wear resistance; high tempering curve permits certain surface treatments.

Application Field: Piercing/blanking dies of all types – for tough materials e.g. spring steel, lamination steels, and abrasive papers as well as plastics.

HSS = **material code number = "3"**
e.g. Order No = 220.**3**. ...

ASP 23
ASP 2023 = High Speed Steel on Powder-Metallurgic Basis

Characteristics: High wear resistance – greater toughness due to excellent homogenity.

Application Field: Same as HSS.

ASP 23
ASP 2023 = **material code number = "6"**
e.g. Order No = 223. **6**. ...

HST = High Speed Steel, Nitrided

Characteristics: High wear resistance – reduced galling tendency on account of nitrides infused into top layer of material.

Application Field: Piercing/blanking dies of all types – for very hard and abrasive materials.

HST = **material code number = "4"**
e.g. Order No = 223. **4**. ...

FIBRO Punches and Matrixes – Description of Materials

HZ = Hard-coated Tooling Components for High-Performance

HZC Composite Vapour Deposition (CVD) **TIC-TIN** Coating

Carrier Materials: HSS Material No 1.3207 and 1.3343 etc.

HCHC Material No 1.2379 and 1.2436 etc.

Properties: The titanium carbide substrate provides a pressure-resistant bond with the carrier metal, while the outer layer of titanium nitride offers the well-known advantages of optimum tribologic behaviour in contact with the stamping stock. By virtue of its outstanding wear resistance, the TIN-layer largely eliminates seizing and cold welding problems in stamping.
Surface Hardness: approx. 3500 HV 0,05
Coating Thickness: 5 to 8 µm approx.

Applications: All tooling components subject to high demands on wear resistance and performance, especially punches in progression/combination tools, as well as cold extrusion punches etc.
Owing to distorsion problems, TIC-TIN is not recommanded for parts with a length/thickness ratio than 20:1.

	TIC-TIN	= **material code number = "5"**
e. g.	Order No	= 223. **5**. ...

HZN Titanium Nitride Coating **TIN**-PVD (physical vapour deposition).

Carrier Material: HSS Material No 1.3207 and 1.3343 etc.
HCHC Material No 1.2379
(HCHC-steels are of conditional suitability)

Properties: The TIN-coating offers excellent frictional characteristics but its compressive strength remains inferior to TIC-TIN deposits. The TIN-deposition process can be applied to partial, selected areas of the tooling component.
Surface Hardness: approx. 2300 HV 0,05
Coating Thickness: 2–4 µm < Ø 20 = 1,5 µm ± 20 %

Applications: Tooling for thin stamping stock such as cold rolled spring steel, zinc-galvanized sheet and strip, copper-beryllium bronze, german silver, and solenoid lamination steels.
Note that the ratio stock thickness to punch point diameter should not exceed 1:3.

	TIN	= **material code number = "0"**
e. g.	Order No	= 223. **0**. ...

HM = Tungsten Carbide

Characteristics: Hard-sintered carbide on WC-basis and of recognized properties; produced by powder-metallurgic processes, FIBRO's exclusively used HIP-densified carbide exhibits much enhanced flexural strength and reduced residual porosity.

Application Field: Die components for highest performance and very large stamping volumes – for altogether ultimate demands on tool life.

	HM	= **material code number = "9"**
e. g.	Order No	= 270. **9**. ...

NWA = Hot-Work Tool Steel – Suitable for Nitriding

Material No 1.2344 or similar.

Characteristics: Chrome-Molybdenum-Vanadium hot working die steel; core strength: > 1400 N/mm²; temperature resistant up to 650°C; surface hardness (nitrided) ≧ 950 HV 0,3.

Application Field: Ejector pins for pressure diecasting, injection- and compression moulding processes, and generally for work at elevated temperatures.

	NWA	= **material code number = "8"**
e. g.	Order No	= 237. **8**. ...

Description:

DIN 9861 restricts the range of stepped punches with conical head to shanks of 3 mm max. diameter and points of 2,95 mm max. diameter. Stepped punches of larger size are, however, quite popular owing to their rigidity and ability to sustain considerable stripping forces. In accommodation of this demand we supply larger sizes whichare ground from stock sizes of the 222.-series.
Please select from those ranges and complete your order in accordance with the example on the right.

Assembly Guide Lines for Head Type Punches with Round Points

Description:

Head type punches with round point (DIN 9844) are intended for floating assembly in the punch retainer. Radial guiding is to be provided by the stripper.

This type of punch assembly eliminates alignment errors caused by distorted mounting of the die set and faulty press geometry.

With punches held in this manner, a clear separation between transmission of perforation force and guiding is achieved.

In order to facilitate assembly of punches of different diameters, the height of the heads is standardized to $4_{+0,2}$ mm (DIN 9844).

Guide Lines:

(excerpts from DIN 9844, page 5)

d_1 max. = stock thickness

stripping force*, for d_1 from 1 to 5 mm: approx. 20 % of piercing force
ditto . . ., for d_1 from 5 to 16 mm: approx. 10 % of piercing force

*applicable to stock not exceeding 400 N/mm² shear strength

Punch retainer: steel of at least 300 N/mm² tensile strength

Retaining hole in punch retainer = 1,05 times d_1 or d_2 respectively

Clearance punch head/percussion plate = 0,02 mm.

Sintered Hard Metal
HIP-densified

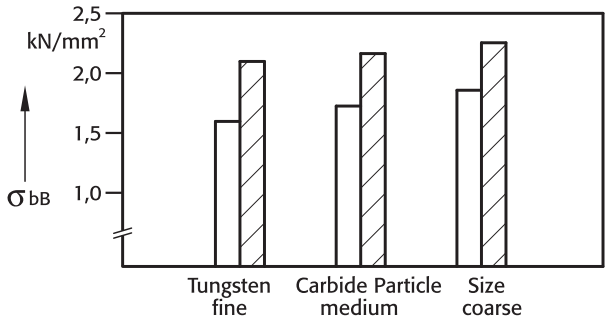
The HIP process (hot isostatic pressing) consists of a special densification treatment.

Applied after the sintering stage, this widely used process involves compacting, at very high temperature and pressure, of the carbide structure. It yields an appreciable reduction in porosity, better strength properties and thus longer die life of press tool members.

As can be seen from the diagrams and tables, both compressive and flexural strength are improved.

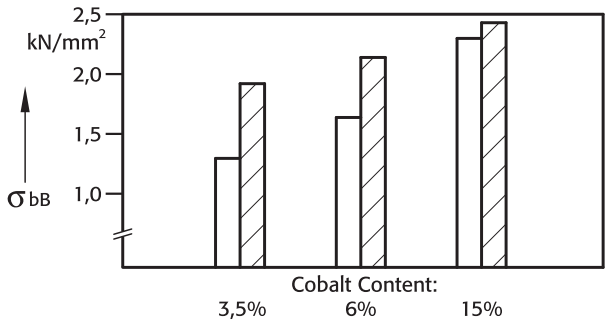
For stamping die tooling, hard metal types of medium tungsten particle size, with a cobalt content of 9 to 12%, have been found succesful in a wide field of applications.

Tensile strength of Tungsten – 6% Cobalt Carbide in the sintered-only versus HIP-densified state, in dependance of Cristallite particle size



a) influence of crystallite size of hard metal phase
(left: sintered only – right: sintered and HIP-treated)

Tensile strength of Tungsten – Cobalt Carbide in the sintered-only versus HIP-densified state, in dependance of total Cobalt content



b) influence of cobalt content
Porosity in the sintered-only state: ≧ A1
(left: sintered only – right: sintered and HIP-treated)

Flexural strength and HV30-hardness of Tungsten-Cobalt Carbides with/ without HIP-treatment and in dependance of Tungsten Carbide particle size and Cobalt content.

Change of Sintered Hard Metal by hot isostatic pressing

Tungsten carbide – particle size	Co %	HV_{30}-Hardness		Flexural Strength N/mm²

Punches
BOLT LOCK

05.2017

Punches and retainers BOLT LOCK

The development of the BOLT LOCK system is a logical continuation of today's quick-release systems for punches beyond a shaft diameter of 40 mm.

Since the punches are available for any geometries, the compact system can be used for a variety of applications.
An example of this is the use of punches to cut sheet metal parts, which are not manufactured as individual parts, but rather mainly as multiple parts for economic reasons. Large perforations in structured parts of the car body can be manufactured without a problem using the system.

In the area of follow-on composites, the system can also be used to cut the grating or remove the pc board.
The system makes a valuable contribution to the further standardisation of tools and connected advantages in regard to time, costs and quality.

- Designed as a replacement for today's serially produced parts previously manufactured individually.
- Punches available in standard shapes and customer-specific special shapes according to data record.
- High quality due to automated serial production.
- Cost savings in design due to CAD standard parts library. Data in the currently common data formats can be called worldwide directly through fibro.partcommunity.com and is thus always up-to-date free of cost.
- Low spatial requirement as conventional system and therefore also an option for saving operations.
- Geometrical changes of the cutting contour do not affect the retaining plate, thus permitting cost savings in case of changes.
- Low mounting effort in tool maintenance, quick-release system.
- Punches are provided with extraction thread in the standard version. Lateral borehole in the case of cutting form width W < 20 mm.

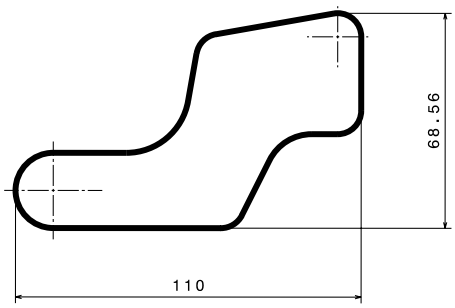
Special designs
Punch BOLT LOCK

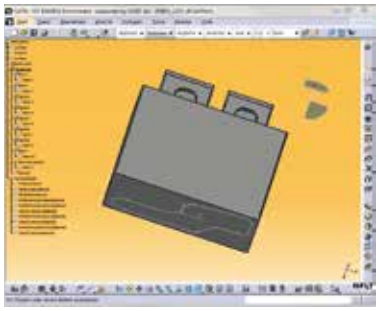
BOLT LOCK punches can be designed with individual cutting contours.
For this purpose, blanks are available as starting models at the fibro.partcommunity.com download portal.
In this starting model, the corresponding cutting contour can be imported using the CAD system
after download and preferably sent to FIBRO in STEP format.
Six sizes are available at the download portal.
During selection, the maximum dimensions X, Y of the cutting form apply as a limit.

Example:

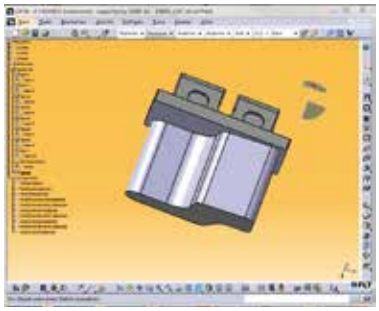


customer-specific cutting contour - max. dimensions of 110 x 69 mm

Selection of punch BOLT LOCK, blank according to the max. dimensions of the cutting form
Size 04 (A1 x B1 : 120 x 80 mm)



Download of model in desired CAD format (e.g.: STEP, CATIA, etc.)



Incorporation of the cutting contour into the punch BOLT LOCK blank model.
Send the data to FIBRO in STEP format.

6 / (6)	240	45	45	239.9	10	44.9	20 / (2)	77 / (E)

Material:

HWS (1.2379)
Hardness 60 +2 HRC

Other materials upon request.

☞ Description of FIBRO materials for tool and die components see at the beginning of Chapter E.

Execution:

BOLT LOCK punches with an slot are provided with an extraction thread (M10).
For cutting form width W < 20 mm, the punch is provided with a transverse bore (Ø 10 mm).

Note:

Order number for punch BOLT LOCK, slot with retaining plate BOLT LOCK, including screws and pins:
2247.2□E2.□□□□□.□□□□□Z

		= 22

Description:

The pilot unit provides exact positioning of sheet metal parts.
There are 2 sizes.
The pilot unit 10 (2276.1.) can used for a hole diameter of 5 to 10 mm and is available as a finished item, 9.8 mm diameter.
The pilot unit 16 (2276.2.) is used for diameter > 10 - 16 mm and is available as a finished item, 15.8 mm diameter.
Smaller diameters have to be ground by the tool making department.

Note:

The pilot unit consists of:
Pilot pin, sleeve, compression spring, dowel pin.

Special shape F 44

Cutting gap (a)

Roundings with the corresponding sharp corners reduce the cutting gap per side (a). If the cutting gap is 0.04 mm (a) or less, FIBRO will round the sharp edges if the cutting punch and the matrixes are ordered together. This reduces the installation time and the risk of an edge breaking during operation.

Note:

(1) and (2) - roundings and sharp edges

(1) rounding on the cutting punch of max. R0.2, corresponds to a sharp edge on the matrix

(2) rounding on the cutting matrix of max. R0.2, corresponds to a sharp edge on the punch

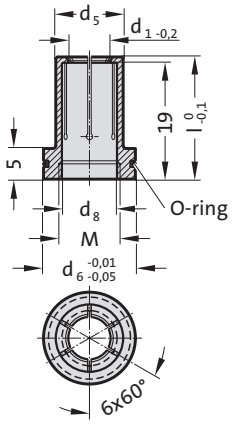
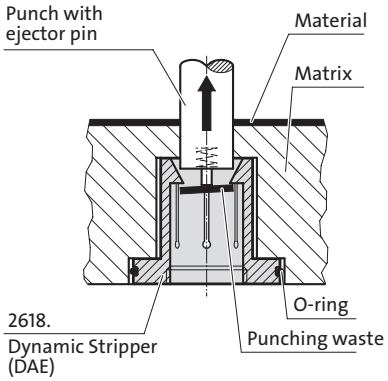
Dynamic stripping element (DAE)

2618.





Description:

The dynamic stripper is used in blanking tools for punching operations using material up to 2 mm thick. The stripper is below the die. It is similar in shape to a segmented chuck. After the punching operation the punch enters the stripper with the punch waste still attached. The dynamic stripper opens up to receive the punch. On the return stroke the dynamic stripper strips the punch waste from the punch. The stripping element diameter d_1 is manufactured 0.2 mm smaller than the diameter p of the punch. To ensure reliable stripping the minimum entry depth into the dynamic stripper must be no less than 1 mm. The dynamic stripper can help to protect both the tool and the product from damage and also accelerate the production rate.

Material:

Steel, hardened

Mounting example

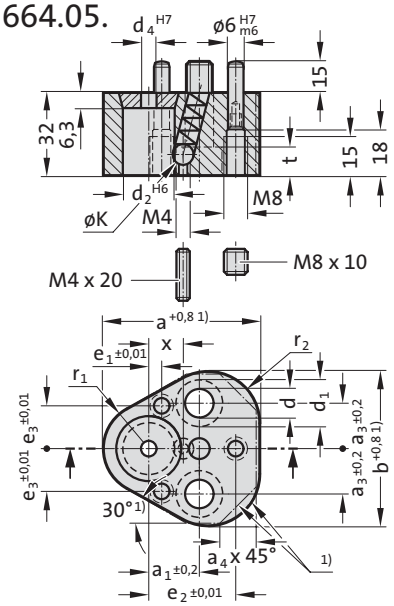
Retainers for ball-lock punches

Triangle retainer for ball-lock punches, light duty

2664.05.



Execution:

Version for metal thicknesses up to 3 mm. The punch locating hole d_2 is manufactured to a tolerance of ± 0.01 mm relative to the 6 stud holes H7. This ensures the interchangeability of the locating plate with other polygon versions.

Note:

Special punch retainers available to order.

1) Contours may vary. Maximum dimensions are specified in the table.

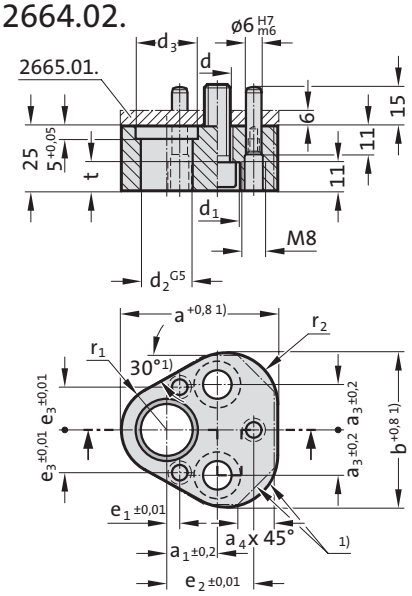
Retainers for punches ISO 8020

Triangle retainer, for punches ISO 8020 without anti-rotation element

2664.02.



Execution:

The centres of the pinholes are the reference points for the position of the punch bore.
The dimensions e_1, e_2 and e_3 have a tolerance of ± 0.01 mm.
The triangle ball-lock retainers are interchangeable.

Note:

Pressure plate 2665.01. to be ordered separately for the receiving punch plate.

1) Contours may vary. Maximum dimensions are specified in the table.

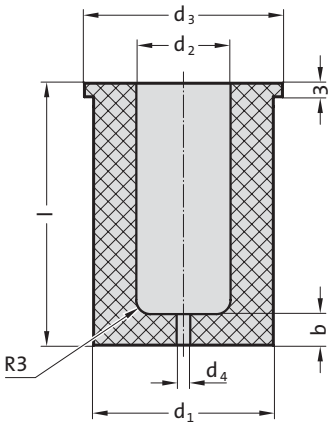
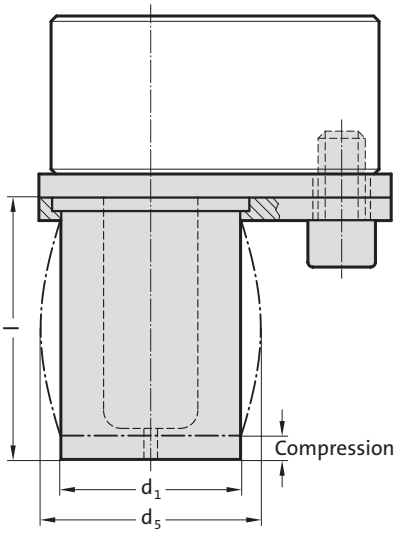
Accessories

Stripping unit

2431.7.



Installation example:



Material:

FIBROFLEX® 95 Shore A

Note:

Stripping units can be used for retainers 2664.02./04./05./06./10.

* values for the stripping force are dependent on a number of parameters (e.g. lubricant, temperature etc.) and may vary from those given here.

** max spring travel should not exceed 15% of the length

Mounting example

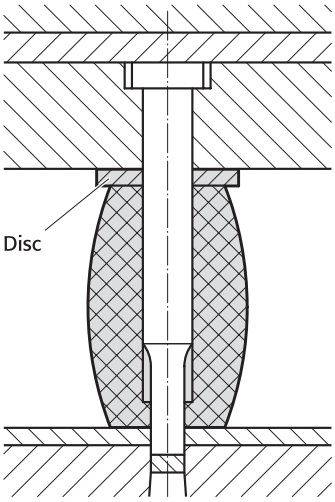
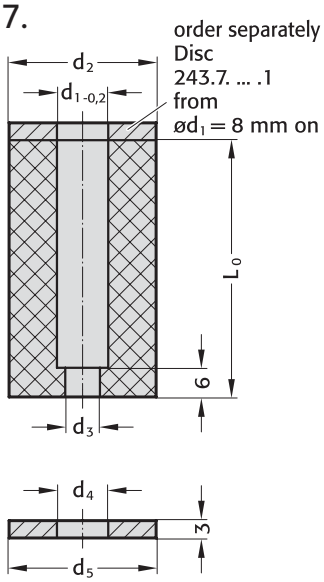
Elastomer Stripper

Mounting example



243.7.



Description:

Repairs, sharpening and modifications on dies equipped with elastomer strippers do not necessitate the dismantling of a stripper plate, thus becoming very expedient.
Any marring of delicate part surfaces is precluded. This makes elastomer strippers ideal for all painted, anodized, plastic-coated and polished parts. FIBROFLEX® Elastomer Strippers are resistant against oils and greases.

Material:

FIBROFLEX®
Hardness: 95 Shore A

Execution:

Stock lenghts: 39, 47, 56 mm.
Other lengths on request (max. 56 mm)!

Application:

Especially in large dies, where the use of elastomer strippers does away with the need of huge stripper plates.

Mounting:

Push stripper over punch, where it will stay put on account of its elasticity.
No other form of retention will be required.
A single press stroke will then pierce a hole through the bottom portion of the stripper that matches the punch shape exactly.

Special Punches, Custom made
High-Precision Special Parts to Customer´s Drawings

FIBRO manufactures Special Form Punches and -Matrices on most modern equipment. Projection Form Grinding, Creep Feed Grinding, EDM and Wire-EDM are used acc. to design details.

Many years of experience enable FIBRO to chose best suitable materials and methods.
We manufacture to customer´s drawings:

- Piercing Punches
- Draw Punched
- Form Punches
- Pre-Extrusion Punches and Ejectors for Bolt Manufacturing
- Flow-Forming Punches
- Punches with 30°-Conical Heads or other head shapes

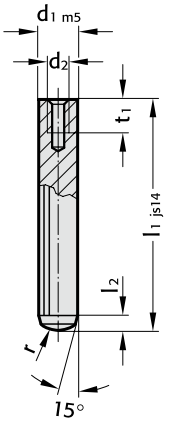
DOWEL PIN WITH INTERNAL EXTRACTING THREAD, SIMILAR TO DIN EN ISO 8735

236.1.



Material:
Steel
Hardness 60 ± 2 HRC

Execution:
hardened and ground to finest finish
FIBRO Dowel Pins are manufactured with the exacting requirements of high class diemaking in mind. Whereas DIN EN ISO 8735 stipulates ISO Class 6 for dowels, we produce our pins to m5.

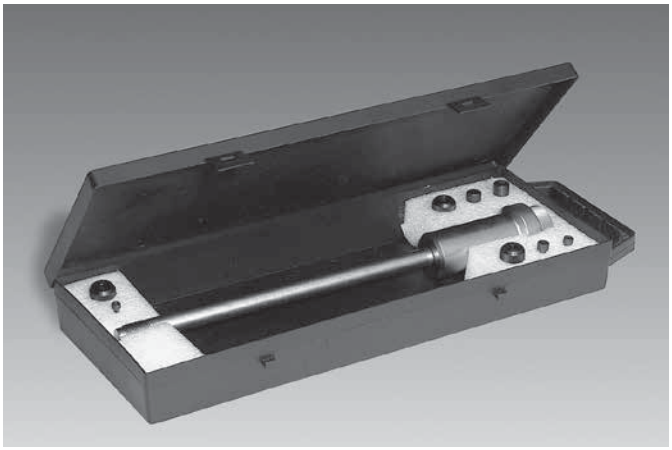
FIBROZIPP

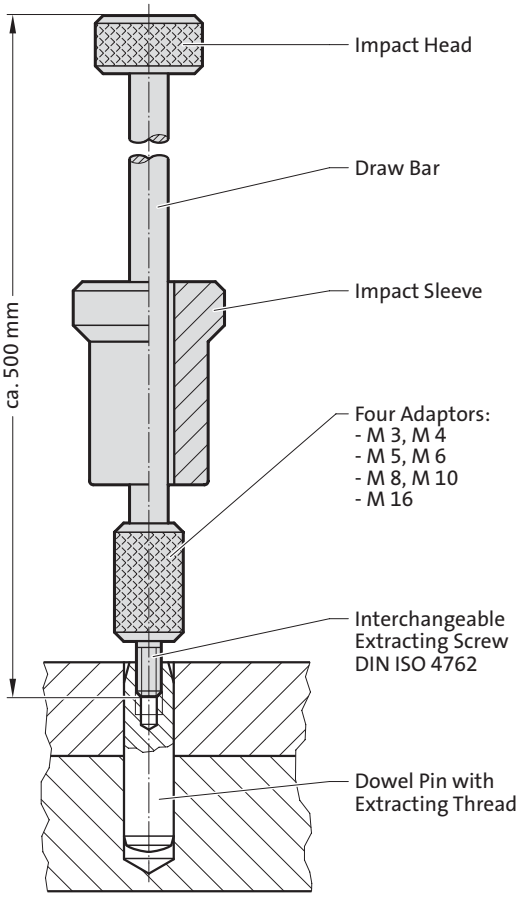


236.001 Dowel Pin Extractor FIBROZIPP

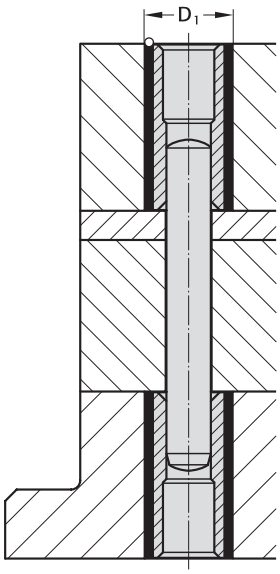
Extraction tool for the fast and convenient removal of dowels with internal extracting thread – also for shafts, plugs and other machine components.

The tool comes with interchangeable adaptors and screws, to fit all threads from M3 to M16.

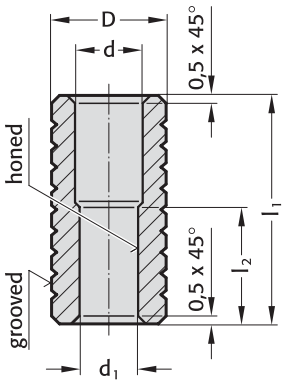
236.001



Liner bush for dowel pin, for bonding



265.1.



Description:

Dowel liner bushes are used where precisely positioned, unhardened parts are often changed or must be replaced, e.g. in precision tool construction.

Material:

WS
Hardness 54 ± 2 HRC

Epoxy-Bonding:

The jig-ground pin holes of the hardened matrix are joined with the dowel liner bush by means of a dowel pin 235.1. Retainer holes for dowel liner bushes should be approximately 2 mm larger in diameter than the bush O.D. – a coarse finish is desirable. Following exact positioning/aligning, FIBROLIT® ZWO or FIBROFIX® SECHS is used for bonding.

265.1. Liner bush for dowel pin, for bonding

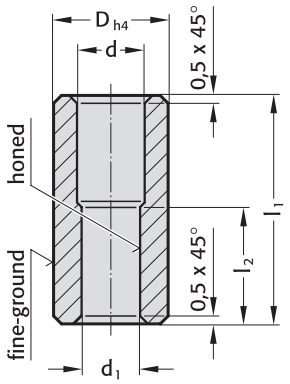
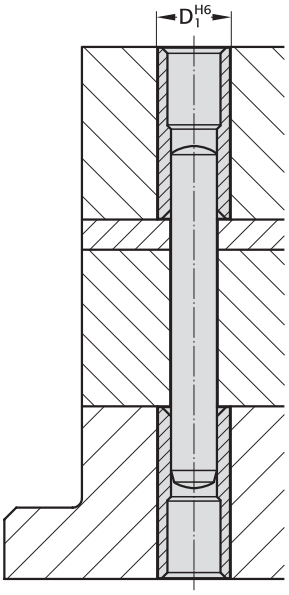
Liner bush for dowel pin, for push fit

2650.1.





Description:

Dowel liner bushes are used where precisely positioned, unhardened parts are often changed or must be replaced, e.g. in precision tool construction.

Material:

WS
Hardness 54 ± 2 HRC

Slip-Fit Bonding:

The position of the bush is given by push fit hole tolerance H6. The adhesive (order no. 281.648) provides optimum push retention whilst offering the following
advantages:
- high accuracy and stiffness
- no problems to find position when changing bushings

We do not recommend to press fit bushings.

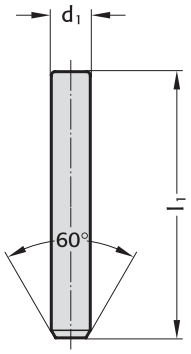
Gauge pin DIN 2269

240.1./2.



Material:

Alloy tool steel, hardened and tempered.
Age-treated repeatedly.
Hardness 60 ± 2 HRC

Execution:

precision ground
Quality class I: diameter tolerance ±0,001
Quality class II: diameter tolerance ±0,002

Single pins:
Quality class I 240.1.
Quality class II 240.2.

Small set:
91 gauge pins from Ø 1-10 mm in steps of 0,1 mm, complete in wooden box.
Quality class I 240.51.
Quality class II 240.52.

Large set:
273 gauge pins from Ø 1-10 mm in steps of 0,1 mm, plus one each. 0,01 mm-oversize/ undersize pin – complete in wooden box
Quality class I 240.41.
Quality class II 240.42.

Special sets:
Supplied to customer's requirements in respect of assortment and quality class. All gauge pins from Ø 3 mm upward are marked with their actual size.

Ordering Code (example):

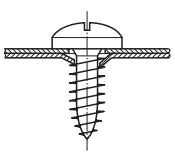
Example of application:



Springs

Springs for dies, fixtures, moulds, machines, mechanisms. For various industrial uses.

FIBRO Compression Springs – a comprehensive range, rooted in the resolute quality consciousness on which our reputation was built. Applied equally to the selection and inspection of raw materials as well as to every step in manufacture.

Springs – a simple product by comparison. But a demanding one also if new standards are to be set by its reliability and performance.

A product whose failure in service always is very expensive, even disastrous in some cases.

A product therefore where it pays . . . to pay for the difference. Whose faults or qualities remain hidden at first. They prove themselves in the long run –!

FIBRO high performance springs – in four duty ranges. Made from selected grades of chrome-vanadium spring steel.
Cold-formed from special rolled wire sections. Capable of sustaining service loadings of exceptional serverity.
Identical fitting dimensions for all springs of common nominal size, facilitating development work. Packing a maximum of spring action into a minimum of design space

Up and down in endless repetition: FIBRO Compression Springs. From the tough stable of tool- and diemaking, where no quarters are given.

A spring range of almost 400 sizes. Each spring strictly to specification. Ends flattened and ground parallel. Surfaces ball shot peened for even greater spring resilience.

FIBRO Springs – for fit-and-forget performance. For confined spaces. For virtually no space at all. For aircraft · tractors · harvesters · dies jigs · fixtures · for machines from A to Z.

For all uses where the going is hard. A choice without regrets.

A special spring range for demanding applications in the manufacture of tools, machinery and jigs & fixtures.

Our spring systems are constantly being developed to cover the most varied requirements.
The spring type is selected to match specific customer requirements.

Special helical springs

Manufactured to DIN ISO 10243, the springs are available in four grades for high cyclic and constant loads.
The specially rolled wire profile is manufactured from high quality heat treated alloy steel.

FIBROFLEX® Springs

These rubber-elastic spring elements in Shorehardness ratings 80, 90, 95, are made from polyurethane elastomers. Benefits include high spring forces and good resilient damping behaviour.

FIBROELAST® Springs

As a superior alternative to rubber springs we offer polyurethane elastomer springs in Shore A hardness rating of 70.

Disc Springs

The required spring characteristics result from various laminations with multiple settings and combinations.

FIBRO Gas springs

close a gap where ever the accent is on accomodation of the utmot force component within a minimum of space – or where exceedingly large travel is demanded: FIBRO Gas springs take care of both demands, even in combination.

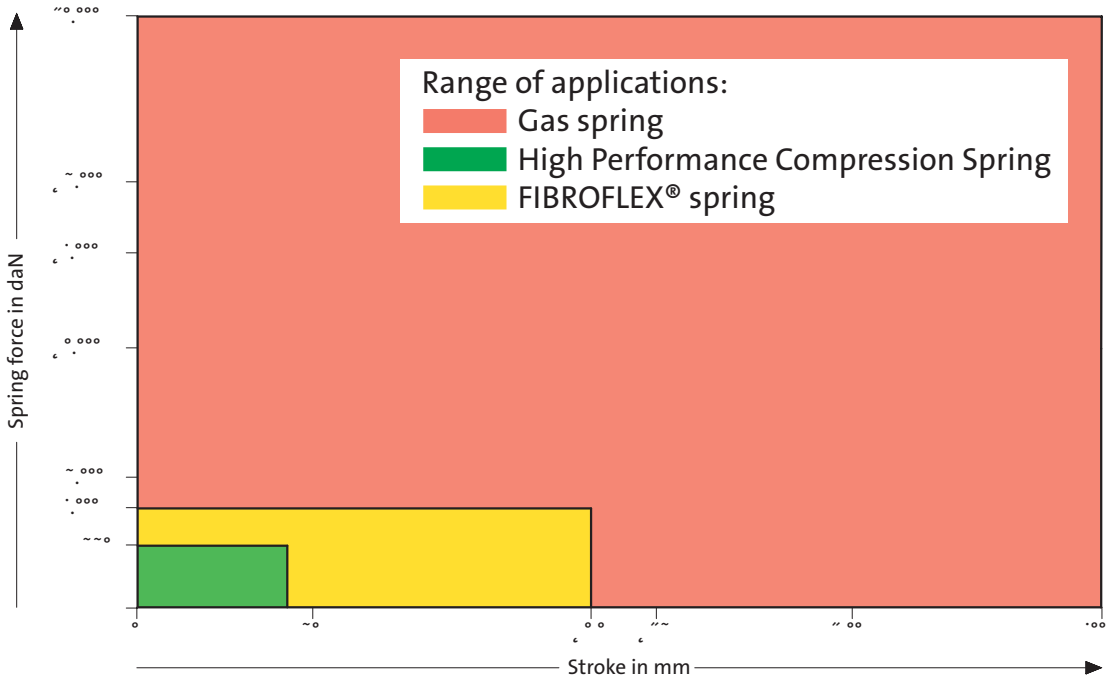
– FIBROFLEX® spring



Compression Springs DIN ISO 10243

Service Data for Limited-/ Extended Spring Life

The achievable service life of helical compression springs depends to a large extent on the composition of the spring wire, the operating conditions, and on design parameters.

In all applications with oscillating spring displacement, careful selection of both preload values and compressive displacement are prerequisites for extended spring life, as confirmed by the permissible stress values in the loading data tables and the stress/spring life diagram.

Shear stress maxima and spring oscillation stress differentials are a direct function of the quality of the spring wire.
FIBRO High Performance Compression Springs are made exclusively from special alloyed chrome-steel. The superlative characteristics of this material are further enhanced by heat treatment under optimal conditions, followed by a ball shot peening process.

For extended spring life under oscillating load changes, the maximal shear stress $\tau_{zul.}$ is 800 N/mm^2, of which some 400 N/mm^2 = (τ_h) may be taken up by the stress differential between spring oscillations.

Higher stress levels are permissible only under the proviso of limited life expectancy, or in cases of static and quasi-static load conditions.

Springs subjected to dynamic load conditions also suffer impairment to their life expectancy through influences such as extreme operating temperatures, transversal stress components, shock loads, and resonant vibration frequencies. In all these instances, a lowering of the stress levels assists towards better spring life.

Working temperature

The spring material has a working temperature of up to 250 °C. This rating is an approximation since the actual approved working temperature will also depend on factors such as load. It is worth noting that above 100 °C the modulus of elasticity decreases and with a reduction in tension setting starts to occur.

Extended Spring Life: Spring Displacement Values

The largest permissible displacement is indicated by S_6 – offering about 62% of the “total” displacement of the wire-to-wire compacted spring (= S_n). This displacement will induce a shear stress of $\tau_{zul.}$ of 800 N/mm^2. The associated stress differentialduring oscillations shoult not exceed 400 N/mm^2 (= τ_h).

Calculation of Spring Forces

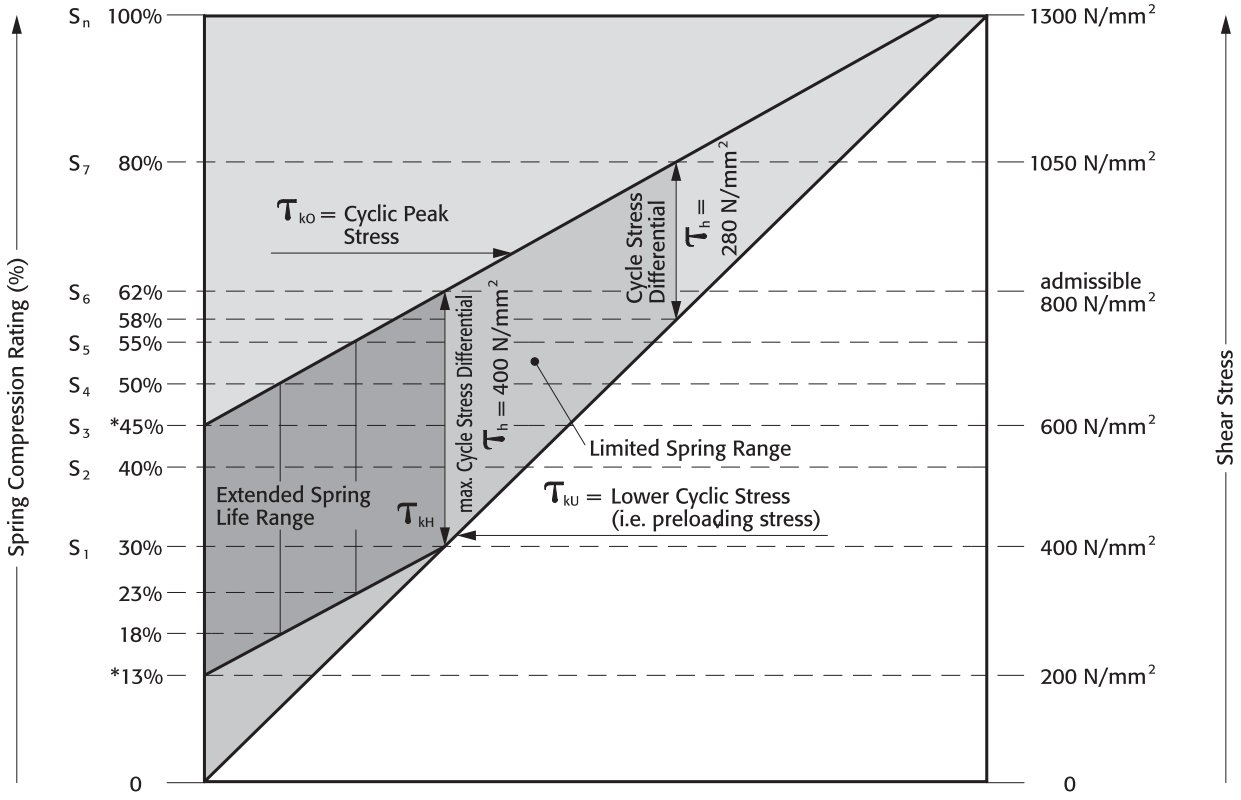
Simple multiplication of the spring coefficient R with the applicable displacement S (mm) yields the spring force value (N).

Spring Force versus Spring Displacement

The relevant tables show the force values for selected displacements od 30, 40, 45, 55, 62, 80 and 100% compression, designated by S_1...S_7. Intermediate force values can be extra-polated from the Stress/Spring Life Diagram.

Cyclic stress maxima/minima as applicable to extended/limited life of FIBRO High-Performance Compression Springs

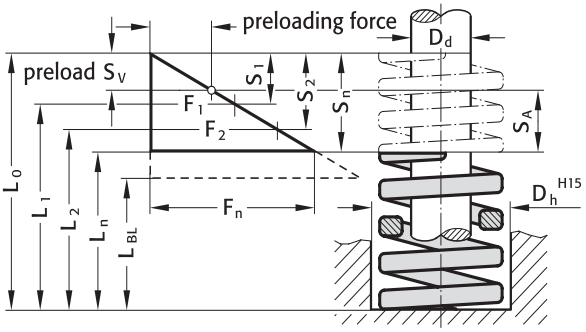
241.



* For application within Extended Spring Life:
up to a compression rating of 45%, a preloading compression of 13% applies .
e. g.: up to a compression rating of 55% a preloading compression of 23% is required.

D_h = diameter of guide sleeve
D_d = diameter of guide pin
L_0 = free length of spring
$L_1 ... L_n$ = length of loaded spring (mm), as related to spring
L_{BL} = length of compacted spring (i.e. wire-to-wire)

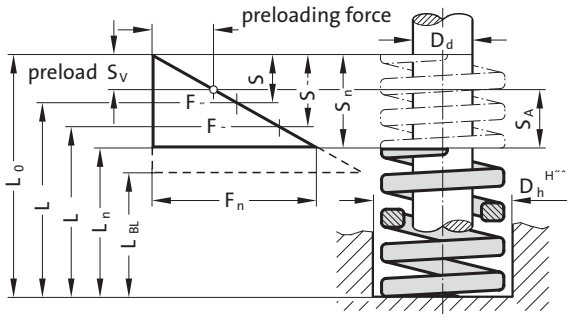
$F_1 ... F_n$ = forces (N) as related to lenght of spring $L_1 ... L_n$
$S_{v1} ... S_{v7}$ = recommended preload compression, as related to compress. $S_1 ... S_7$
$S_1 ... S_n$ = compression, as related to spring forces $F_1 ... F_n$
R = spring rate (N/mm)
$S_{A1} ... S_{A7}$ = working stroke (mm))



Working strokes $S_{A1} ... S_{A7}$ = compress. ($S_1 ... S_7$) – minus preloading compression ($S_{v1} ... S_{v7}$)

Notice: 80% compression must not be exceeded!

High performance compression spring, XSF, Colour "Violet"



D_h = dia. of guide sleeve
D_d = diameter of guide pin
L_0 = free length of spring
$L_{\sim}...L_n$ = length of loaded spring (mm) as related to spring forces $F_{\sim}...F_n$
L_{BL} = length of compacted spring (i.e. wire-to-wire)
$F_{\sim}...F_n$ = forces (N) as related to length of spring $L_{\sim}...L_n$
$S_{V\sim}...S_{V7}$ = recommend. preload. compression, as relat. to compress. $S_{\sim}...S_7$
$S_{\sim}...S_n$ = compr. as related to spring forces $F_{\sim}...F_n$
R = spring rate (N/mm)
$S_{A\sim}...S_{A7}$ = working stroke (mm)

High Performance Compression Springs
DIN ISO 10243

D_h = dia. of guide sleeve

D_d = diameter of guide pin

L_0 = free length of spring

$L_1 ... L_n$ = length of loaded spring (mm) as related to spring forces $F_1 ... F_n$

L_{BL} = length of compacted-spring (i.e. wire-to-wire)

$F_1 ... F_n$ = forces (N) as related to length of spring $L_1 ... L_n$

$S_{v1} ... S_{v7}$ = recommend. preload. compression, as relat. to compress. $S_1 ... S_7$

$S_1 ... S_n$ = compr. as related to spring forces $F_1 ... F_n$

R = spring rate (N/mm)

$S_{A1} ... S_{A7}$ = working stroke (mm)

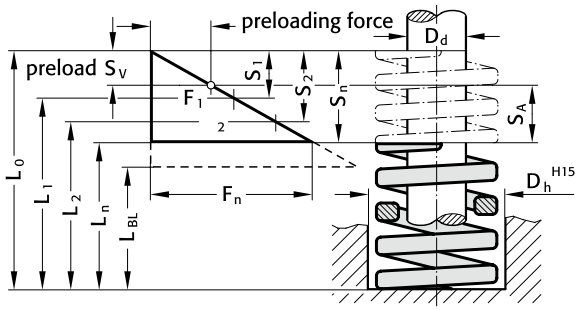
HIGH PERFORMANCE COMPRESSION SPRING, DIN ISO 10243

D_h = dia. of guide sleeve
D_d = diameter of guide pin
L_0 = free length of spring
$L_1 \ldots L_n$ = length of loaded spring (mm) as related to spring forces $F_1 \ldots F_n$
L_{BL} = length of compacted-spring (i.e. wire-to-wire)
$F_1 \ldots F_n$ = forces (N) as related to length of spring $L_1 \ldots L_n$
$S_{v1} \ldots S_{v7}$ = recommend. preload. compression, as relat. to compress. $S_1 \ldots S_7$
$S_1 \ldots S_n$ = compr. as related to spring forces $F_1 \ldots F_n$
R = spring rate N/mm
$S_{A1} \ldots S_{A7}$ = working stroke (mm)



241.17. High performance compression spring, DIN ISO 10243 Colour: „Yellow“

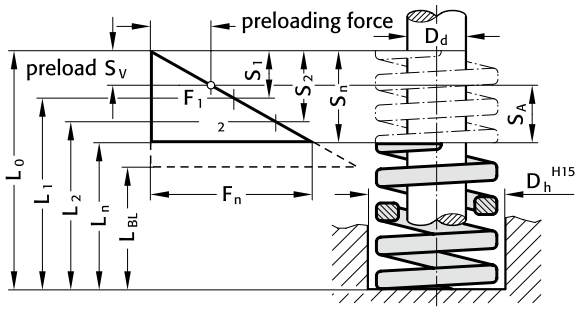
HIGH PERFORMANCE COMPRESSION SPRING, DIN ISO 10243

D_h = dia. of guide sleeve
D_d = diameter of guide pin
L_0 = free length of spring
$L_1 \ldots L_n$ = length of loaded spring (mm) as related to spring forces $F_1 \ldots F_n$
L_{BL} = length of compacted-spring (i.e. wire-to-wire)
$F_1 \ldots F_n$ = forces (N) as related to length of spring $L_1 \ldots L_n$
$S_{v1} \ldots S_{v7}$ = recommend. preload. compression, as relat. to compress. $S_1 \ldots S_7$
$S_1 \ldots S_n$ = compr. as related to spring forces $F_1 \ldots F_n$
R = spring rate N/mm
$S_{A1} \ldots S_{A7}$ = working stroke (mm)



241.17. High performance compression spring, DIN ISO 10243 Colour: „Yellow“

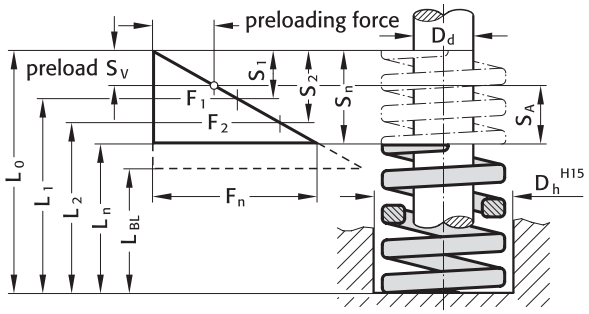
High Performance Compression Springs
DIN ISO 10243



D_h = dia. of guide sleeve

D_d = diameter of guide pin

L_0 = free length of spring

$L_1 ... L_n$ = length of loaded spring (mm) as related to spring forces $F_1 ... F_n$

L_{BL} = length of compacted-spring (i.e. wire-to-wire)

$F_1 ... F_n$ = forces (N) as related to length of spring $L_1 ... L_n$

$S_{v1} ... S_{v7}$ = recommend. preload. compression, as relat. to compress. $S_1 ... S_7$

$S_1 ... S_n$ = compr. as related to spring forces $F_1 ... F_n$

R = spring rate (N/mm)

$S_{A1} ... S_{A7}$ = working stroke (mm)

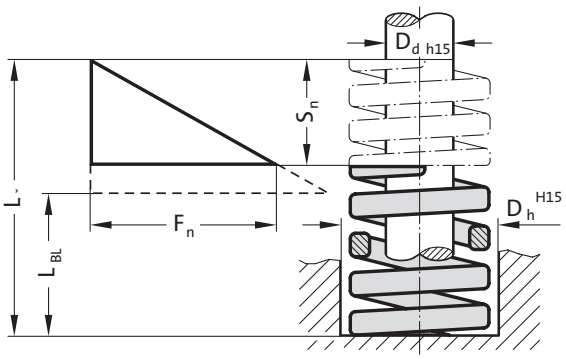
High performance compression spring, 3XLF, Colour "White"



D_h = dia. of guide sleeve

D_d = diameter of guide pin

L_o = free length of spring

L_{BL} = length of compacted spring (i.e. wire-to-wire)

F_n = Spring force in N

S_n = Stroke

R = spring rate (N/mm)

Description:

The diameters are comparable with the high performance compression springs DIN ISO 10243. The special flat wound wire cross section brings a reduction of the medium winding diameter for the same winding ratio with an edge-wound spring. Consequently, the high performance compression spring 3XLF has a 6x larger starting spring force than the high performance compression spring DIN ISO 10243 colour code “yellow”.

241.19. High performance compression spring, 3XLF, Colour "White"

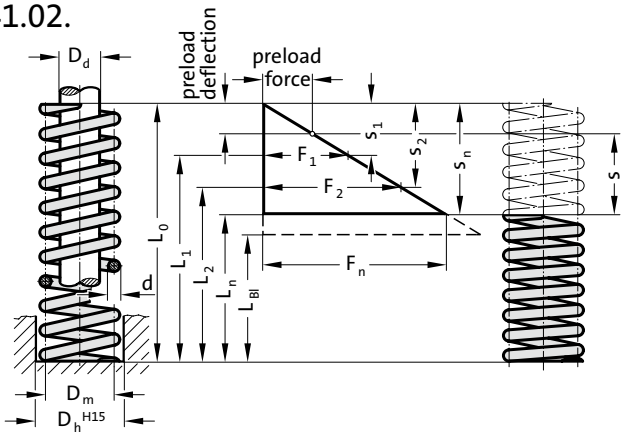
ROUND WIRE COMPRESSION SPRING

241.02.



Material:
Spring steel wire class C DIN 17.223 sheet 1, drawn and patented.
For highly stressed compression springs and for loads both static and oscillating.

Execution:
Manufacturing tolerances to DIN 2095 class 2, load-stabilized, surface homogenized by ball-shot, oiled.
Flattened and ground end coils.

Note:
Max. working temperature 100 °C.
All spring sizes listed also available in “making-up-”lengths of 500 mm. When ordering these, please add “500” at the end of the order number – e. g. 241.02.11.040.500.

D_h = diameter of guide sleeve
D_m = mean coil diameter
D_d = diameter of guide pin
d = diameter of spring wire
L_0 = free length of spring
L_1...L_n = lengths of loaded spring as related to spring forces F_1...F_n
R = spring rate [N/mm]
L_{Bl} = length of compacted spring (i.-e. wire-to-wire)
F_1...F_n = forces [N] as related to lengths of spring L_1...L_n
s_1...s_n = deflection as related to spring forces F_1...F_n
i_f = number of active coils
s = working stroke of spring – i. e. working deflection

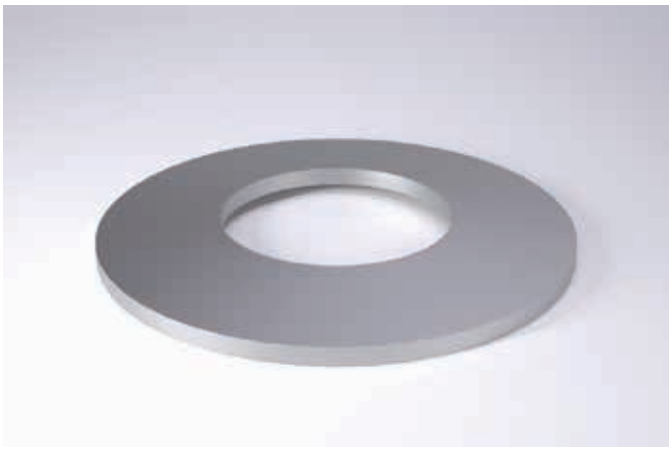
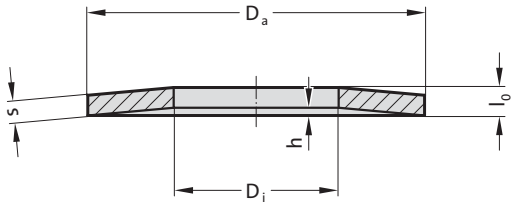
* = long spring life; ** = medium spring life; *** = max. spring loading

Disc spring DIN 2093



242.01.



Material:

50 CrV 4 Vanadium Spring Steel

Note:

FIBRO Disc Springs 242.01. are made from 50 CrV 4 premier grade spring steel. This “classic” spring material guarantes optimal performance levels within the temperature range from –15 °C to +150 °C. “Hot pres-setting” allows working temperatures from –25 °C to +200 °C.

D_a = outside diameter of spring
D_i = diameter of hole
s = crossectional thickness of spring
h = concavity of free spring
l_0 =total height of free spring
f = deflection of spring, caused by load F
F = load F [N], causing deflection f

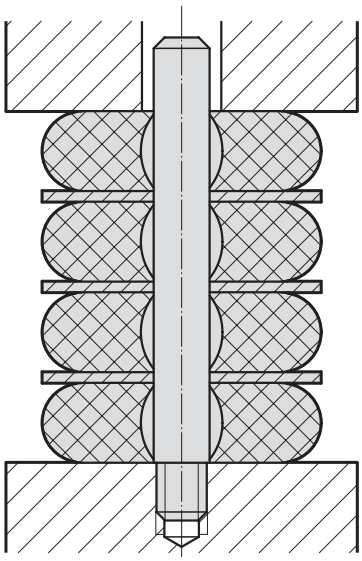
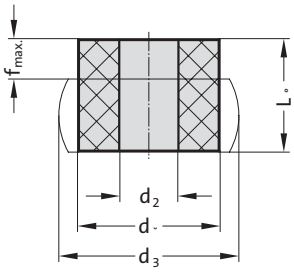
FIBROFLEX®-Elastomer spring for FIBROFLEX®-Spring system

Mounting example



244.1.



Description:

FIBROFLEX® Spring Systems represent a finely graded range of elastomer spring units (material: polyurethane) exhibiting particular suitability for all stamping dies and related tools.

The 244.-Systems comprise FIBROFLEX® Spring Elements 244.1., available in three Shore hardnesses. With the aid of Stacking Washers 244.4. and Guide Pins 244.5., the elements can be stacked.
Note that stacking with interposed stacking washers results in the addition of the individual spring deflections – without addition of the spring forces.

Note:

Physical and chemical properties of FIBROFLEX®-Elastomer – see at the beginning of chapter G.
Dowel pins (235./2351.1.) or guide pins (244.5.), recommended for stacks higher than 1,5 x d_2.

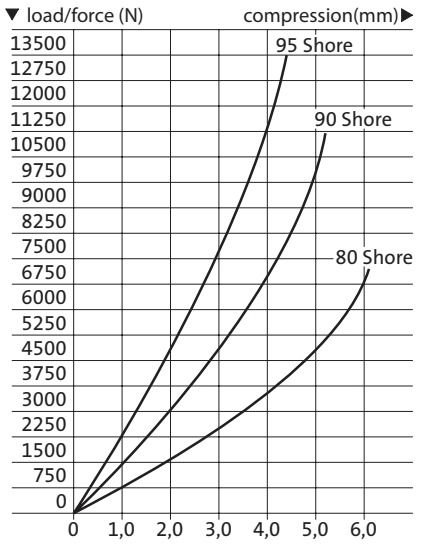
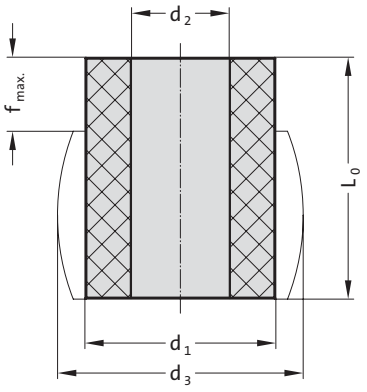
244.1.40. – Ø 40



FIBROFLEX®-Tubular spring element 80 Shore A, to DIN ISO 10069-1

246.5.



Description:

FIBROFLEX® Spring Elements are made from highly elastic polyurethane elastomers.
Shore hardness is the most significant rating of the various FIBROFLEX®-Elements. Shore hardness ratings are symbolized by distinctive colour coding.
Correct selection of Shore hardness has a fundamental bearing on the success of FIBROFLEX®-applications.

Material:

Polyurethan 80 Shore A
Colour: green

Note:

The physical properties of polyurethane elastomers means that they have a tendency to settle. The extent of such settlement is dependent on the internal heat of friction, speed and number of load changes, the spring travel and the Shore hardness.
Settlement may be as much as 4 to 7% of the spring length L_0.

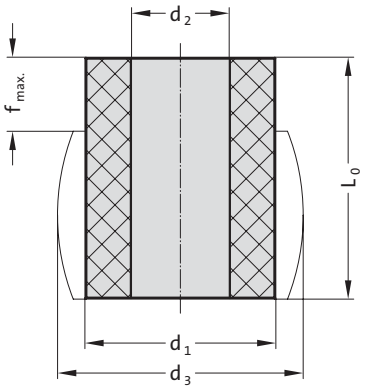
FIBROFLEX®-Tubular spring element 95 Shore A, to DIN ISO 10069-1

246.7.



Description:

FIBROFLEX® Spring Elements are made from highly elastic polyurethane elastomers.
Shore hardness is the most significant rating of the various FIBROFLEX®-Elements. Shore hardness ratings are symbolized by distinctive colour coding.
Correct selection of Shore hardness has a fundamental bearing on the success of FIBROFLEX®-applications.

Material:

Polyurethan 95 Shore A
Colour: red

Note:

The physical properties of polyurethane elastomers means that they have a tendency to settle. The extent of such settlement is dependent on the internal heat of friction, speed and number of load changes, the spring travel and the Shore hardness.
Settlement may be as much as 4 to 7% of the spring length L_0.

246.7. FIBROFLEX®-Tubular spring element 95 Shore A, to DIN ISO 10069-1

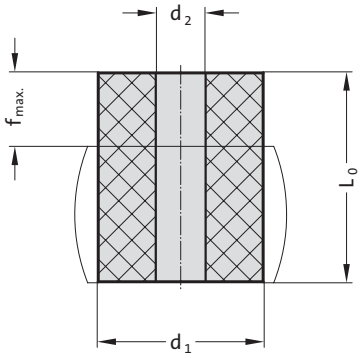
Tubular Spring Element, Rubber 70 Shore A

2461.2.



Material:

Chloroprene rubber 70 shore A
Colour: black

Note:

The physical properties of elastomere springs means that they have a tendency to settle. The extent of such settlement is dependent on the internal heat of friction, speed and number of load changes, the spring travel and the Shore hardness.
Settlement may be as much as 3 to 5% of the spring length L_0.

Physical characteristics:

Tensile strength acc. to DIN 53504:
≥ 12 N/mm²
Elongation at break acc. to DIN 53504:
≥ 250 %
Bulk density acc. to DIN 53479: 1.37 g/cm³
Compression set acc. to DIN 53517:
≤ 20 % (24 h/70 °C)
Temperature scope: -20 °C to 80 °C, short-term to max. 120 °C

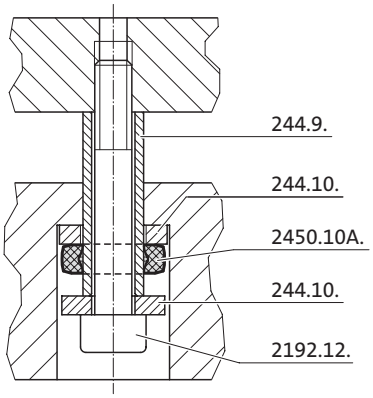
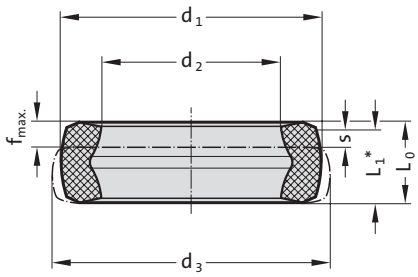
Damper, light-duty

Mounting example



2450.10A.



Description:

Dampers, light duty , made of co-polyester elastomer are found in the elevating units in progressive dies in the automotive and white goods industry. The increasing stresses on screws and bolts as well as noise emission are reduced by the light duty dampers.

Benefits:

- High absorption of force and energy
- Long service life and high level of operating safety
- Noise reduction
- High degree of effectiveness

Material:

Co-Polyester-Elastomer

Technical data:

Surroundings: Resistant to microbes, seawater, chemicals.
No absorption of water and no swelling.
Grease and oil resistant.
Approved temperature range: -40°C to +90°C (-40°F to +194°F)

Note:

Socket cap screw 2192.12. see Section C
Spacer tube 244.9. see Section F
Washer 244.10. see Section F

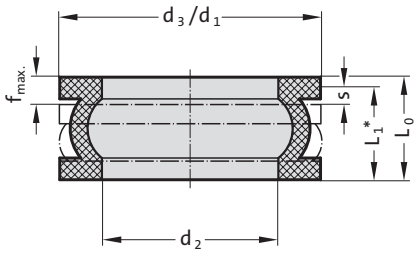
*Dimension L_1 is the slump which must be taken into account for the design.

**W = Total energy per stroke

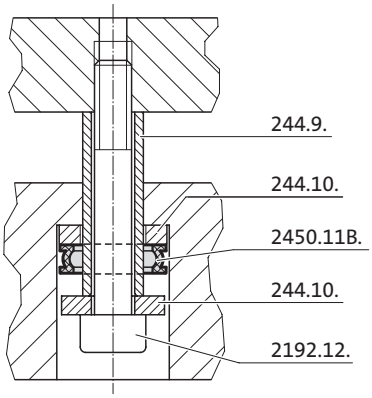
***W_h = Total energy per hour

Damper, light-duty

2450.11B.



Mounting example



Description:

Dampers, light duty , made of co-polyester elastomer are found in the elevating units in progressive dies in the automotive and white goods industry. The increasing stresses on screws and bolts as well as noise emission are reduced by the light duty dampers.
The two-ply version of the flanged damper can also be used depending on the force or stroke without the use of an additional distance washer.

Benefits:

- High absorption of force and energy
- Long service life and high level of operating safety
- Noise reduction
- High degree of effectiveness

Material:

Co-Polyester-Elastomer

Technical data:

Surroundings: Resistant to microbes, seawater, chemicals.
No absorption of water and no swelling.
Grease and oil resistant.
Approved temperature range: -40°C to +90°C (-40°F to +194°F)

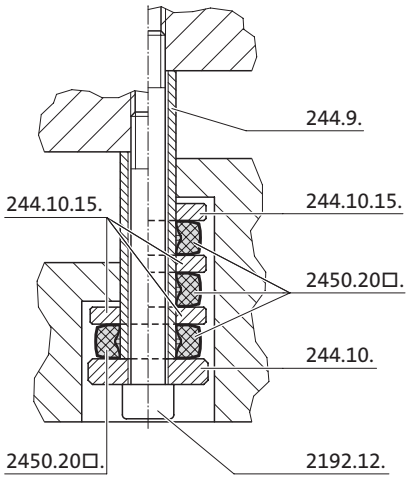
**W = Total energy per stroke

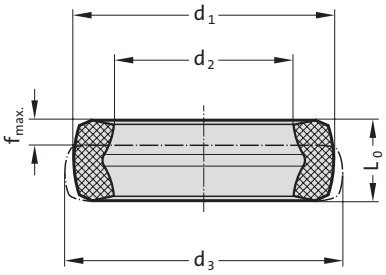
***W_h = Total energy per hour

Damper, heavy-duty

Mounting example



2450.20□.



Description:

The co-polyester elastomer dampers, heavy-duty, are used as holddown dampers in the automotive and white goods industry. Increasing return stroke speeds and the related stresses on screws and bolts in moveable, suspended tool parts are absorbed by the hold-down dampers. Reduced noise emission is a further additional positive sideeffect.

Benefits:

- High absorption of force and energy
- Slight settlement
- Energy absorption between 5 Nm and 269 Nm
- Long service life and high level of operating safety
- Noise reduction
- High degree of effectiveness

Material:

Co-Polyester-Elastomer

Technical data:

Surroundings: Resistant to microbes, seawater, chemicals.
No absorption of water and no swelling.
Grease and oil resistant.
Approved temperature range: -40°C to +90°C (-40°F to +194°F)

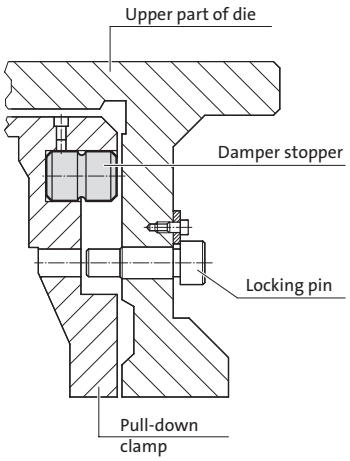
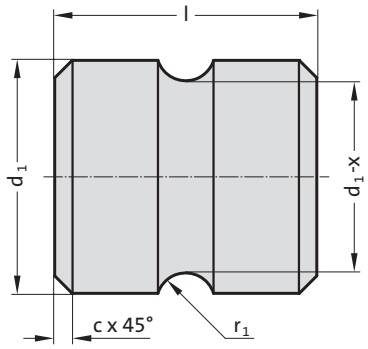
Damper stopper

Mounting example



2451.10D.



Description:

Damper stopper made of co-polyester elastomer dampen the recoil on the locking and unlocking pins in the manufacturing of jigs. Damper stoppers are used in the automotive and white goods industry. Damper stoppers sit inside the pull-down clamps and are radially stressed. The number and size depends on the weight and the velocity of the pull-down clamps.

Benefits:

- High absorption of force and energy
- Slight settlement
- UV protection
- Long service life and high level of operating safety
- Noise reduction
- High degree of eff ectiveness

Material:

Co-polyester elastomer, black

Technical data:

Surroundings: Resistant to microbes, seawater, chemicals.
No absorption of water and no swelling.
Grease and oil resistant.
Approved temperature range: -40°C to +90°C (-40°F to +194°F)

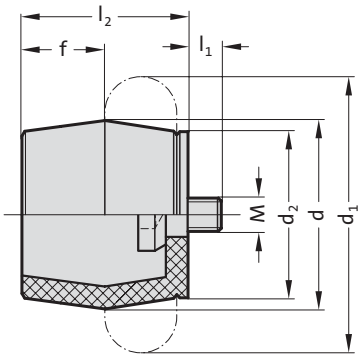
Damping unit SD

2452.10. .2



Material:

Damping unit SD: CO polyester elastomer, 55 Shore D
Screw: Steel
Technical data:
Resistant to microbes, seawater, and chemicals, as well as very good UV and ozone resistance. No water absorption and no bloating.

Starting speed: up to max. 5 m/s
Installation position: any
Dynamic power consumption: 870 N through 90000 N
Permissible temperature range: -40°C through 90°C
Dissipation of energy: 40% through 66%

Note:

We are happy to support you in the calculation and design of a suitable damping unit.

Dynamic (v>0.5 m/s) characteristic curves available for all types upon request.
SD damping units can also be used for emergency stop applications. Further information upon request.

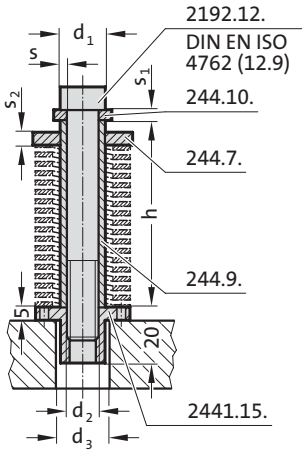
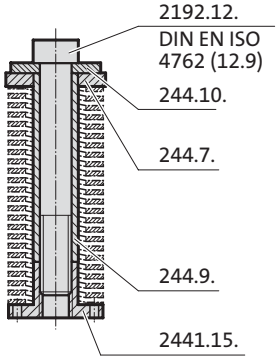
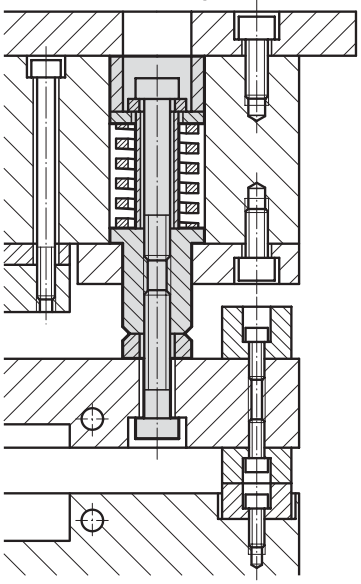
2441.15.1. Mounting examples





Spring- and Spacer Unit

Installation Example:



Note:

The headed spacer plugs are ground equal after assembly in the punch holder.

Note that regrinding on punch points must be compensated by grinding an equal amount off the compensation sleeves.

Adjust depth of c'bore h_3 or height of spacer sleeve so that spacer tube cap screw is relieved by about 0,1 mm.

244.□□.□□□.10

Application without Spacer Sleeve (c'bored hole)

244.□□.□□□.11

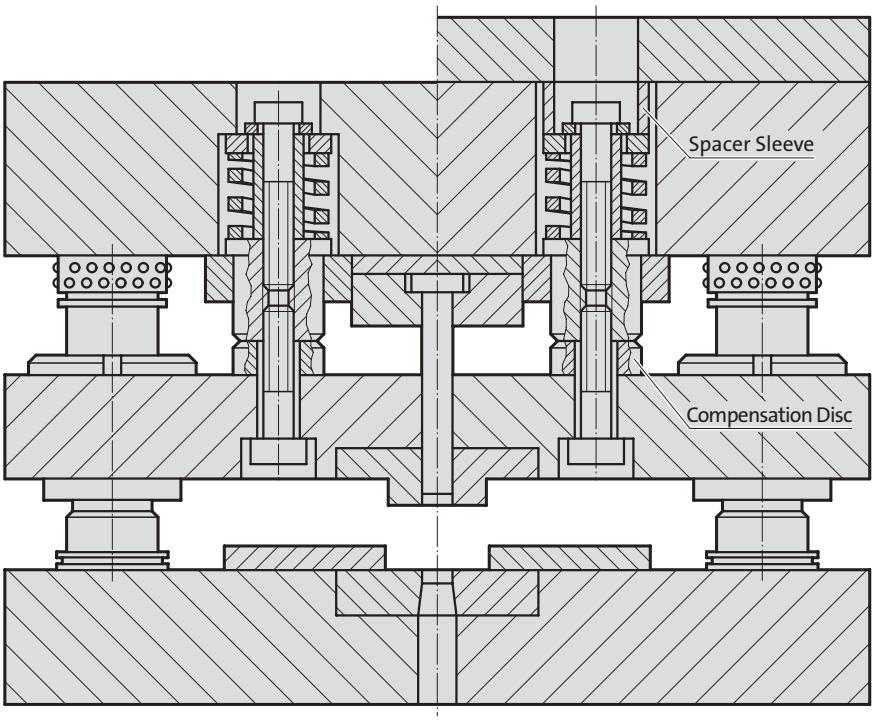
Combination Spring- and Spacer Units
Application Examples
Spring Characteristics

Without Spacer Sleeve

(with c`bored hole)
244.□□.□□□.10.

With Spacer Sleeve

(with straight hole)
244.□□.□□□.11.



Description:

The preloaded Combination Spring- and Spacer Unit combines the functions of providing the spring force and of spacing the stripper in one constructional element, whilst conventional designs employed two.

The resulting advantages therefore consist of space savings and reduced machining cost with regard to the various die members.

The execution with spacer sleeve makes it possible to exchange the whole unit by simply removing the top clamping plate. Removal of the compensation disc gives unimpeded access to the punches – for the purpose of sharpening/grinding.

Important Notice:

In order to preserve pre-existing conditions in regard of spring force and displacement, it is essential that regrinding of the punches equals regrinding of the compensation disc – i. e. the metal removal from either component must be kept the same.

Helical compression springs must be ordered separately, see at the beginning of chapter F.

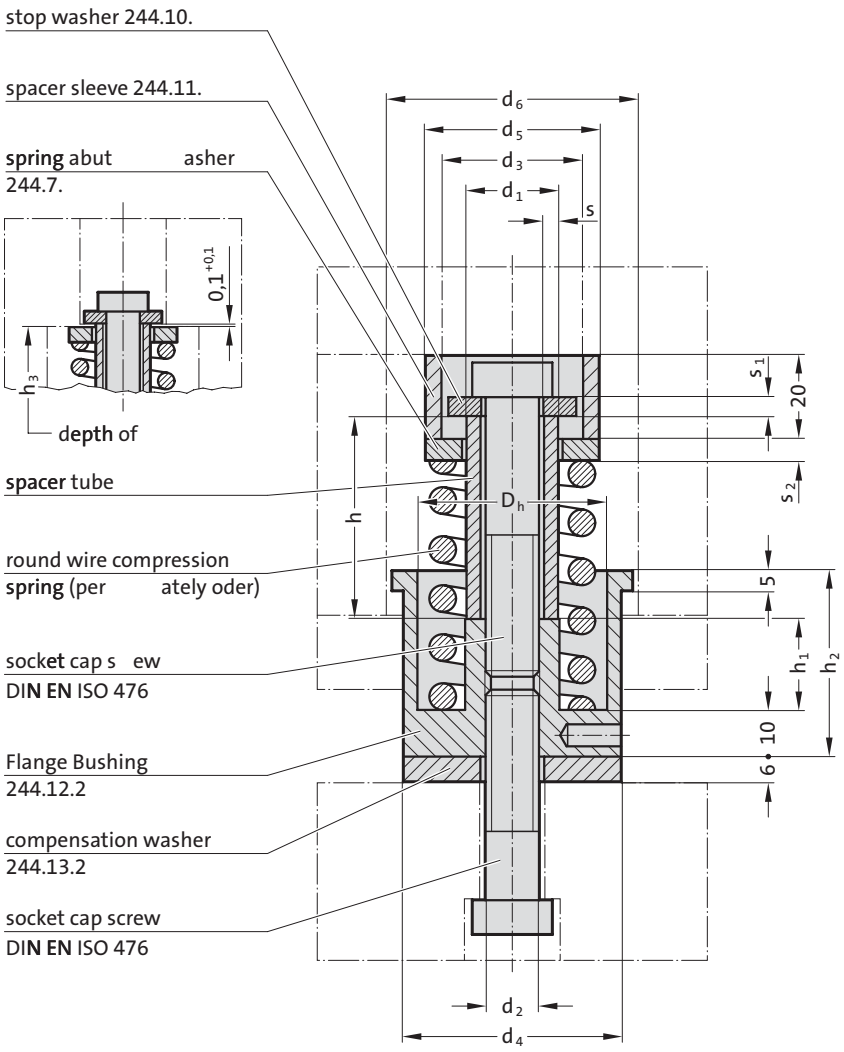
Spring- and Spacer Unit
low installation space

244.□□.3.□□□.10

Application without ve
(c'bored hole)

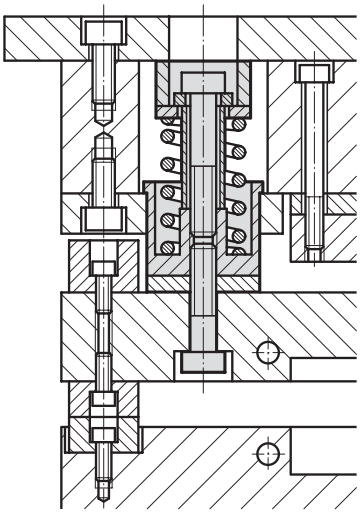
244.□□.3.□□□.11

Application with Sp ve
(straight hole)



Installation Example:

with spacer sleeve



Note:

After fitting, the flange bushings are ground to the same length.

Note that regrind allowance on punch points must equal that taken off the compensation washers.

Adjust depth of c'bore h_3 or height of spacer sleeve so that spacer tube cap screw is relieved by about 0,1 mm.

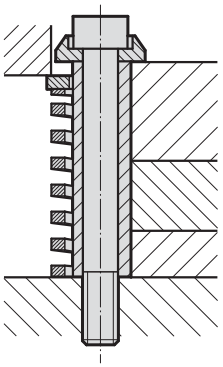
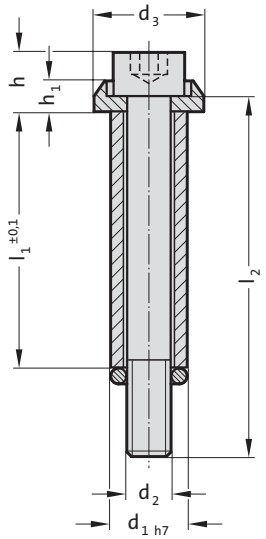
Spring and spacer unit

Mounting example



244.16.



Description:

These units can be used as an alternative to shoulder screws.
Advantages:
Precision length adjustments by way of grinding. The units have many uses – as can be seen from the installation examples below.

Material:

Spacer tube: Steel, hardened
Socket cap screw DIN EN ISO 4762 (12.9)

Execution:

Outside diameter ground
Tolerance: h_7

Note:

The units are supplied with a retaining O-ring **which must be removed before application.**

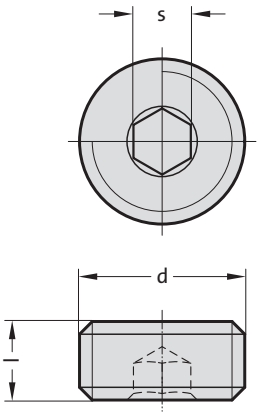
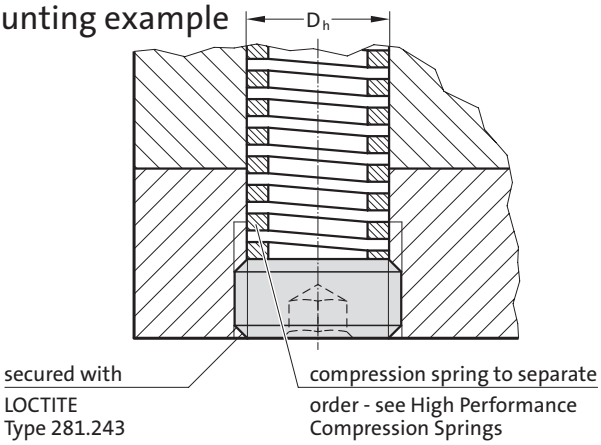
Pipe plug (for compresssion spring adjustement)

241.00.1.



Mounting example



Description:

These set screws can be used as adjustable spring stops. They are available for all customary spring sizes from Ø 10 to Ø 40. The set screws are suitable for springs 241.14. to .17.
Their use offers the following advantages:
– Adjustable spring tension from under the bottom bolster, without any dismantling.
– Exchange of springs without dismantling.
– Through-holes instead of blind holes for spring accommodation.

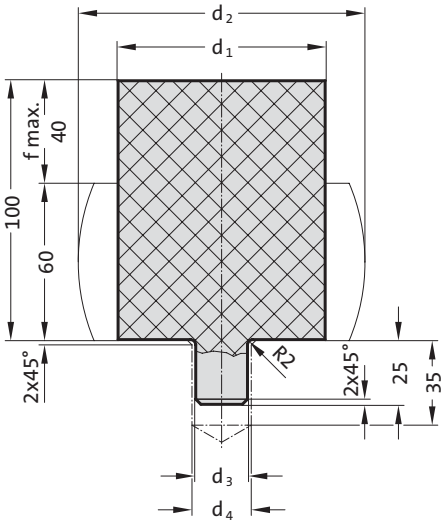
Setting-up bumper, round

2531.7.



Description:

Setting up bumpers are used for setting down and setting up tools and replace shear pins.

Material:

FIBROFLEX®
Hardness 95 Shore A

Attention:

Setting up bumpers are not suitable for continuous use. To prevent damage when setting down tools, ensure that the setting up bumpers are large enough to withstand 1.5 times the weight of the tool (see table).

Implementation:

1. When setting up slowly move the ram into the bottom position.
2. Clamp the tool, then move the ram back to the top position (with the setting up bumper compressed to a height of 60 mm).
3. After setting up, remove the setting up bumpers and place them in the storage hole on the tool.

Mounting example

Strippers for Blanking Dies
to Mercedes-Benz- / VW Standard / VDI 3362

Material:

Perbunan
Hardness to DIN 53505:
Shore A65±5

Construction:

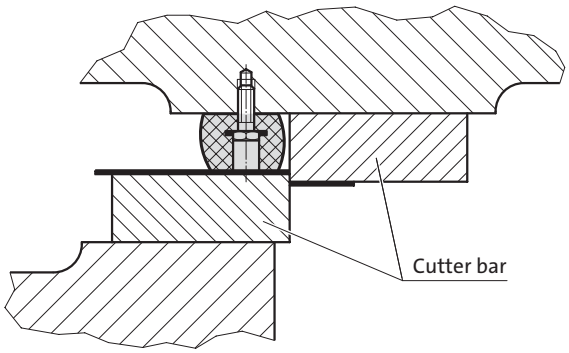
Surface quality to DIN ISO 3302-1

Application:

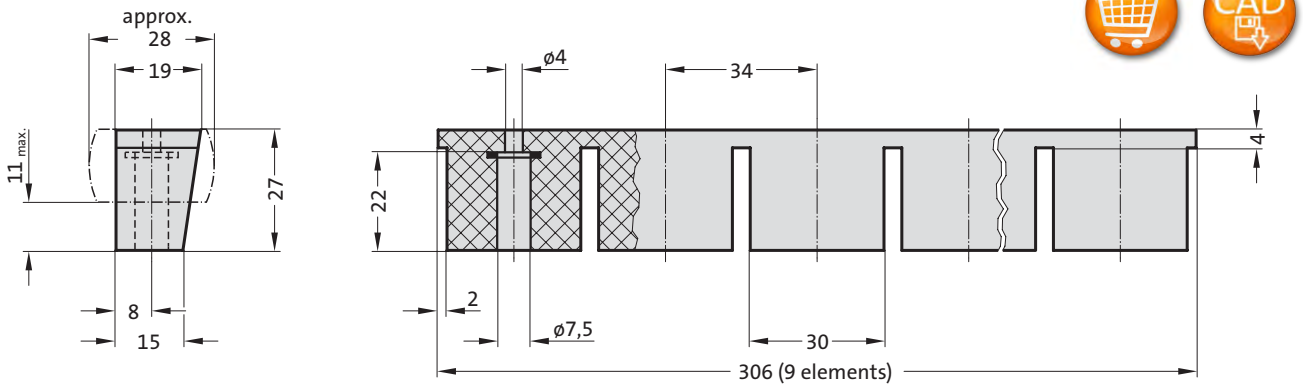
For blanking die tools

Supplied without screws

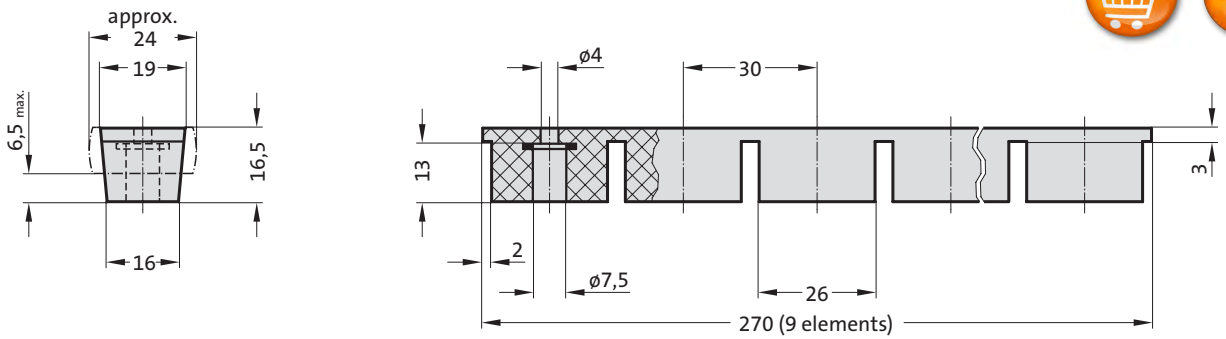
Installation example



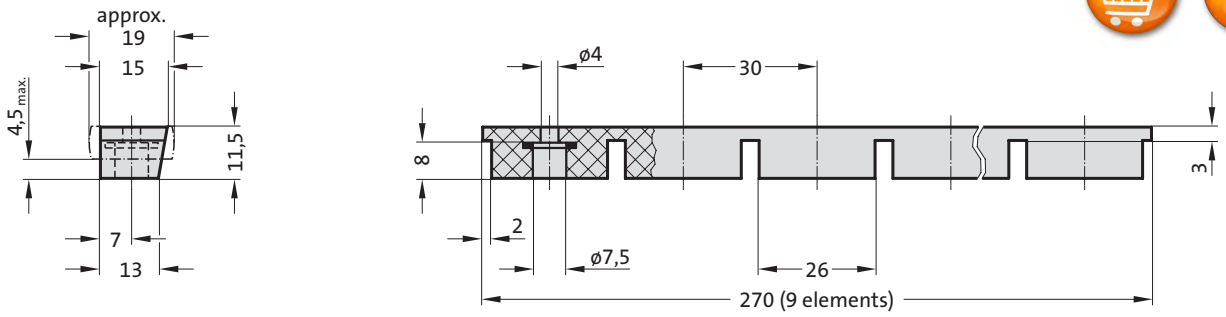
2532.2.190.270.0306



2532.2.190.165.0270



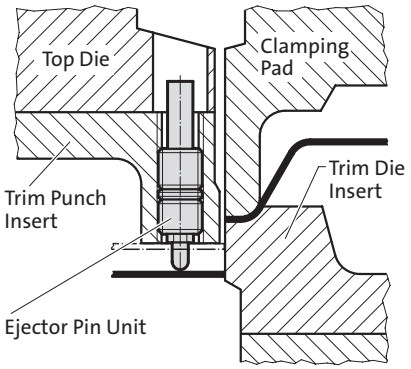
2532.2.150.115.0270



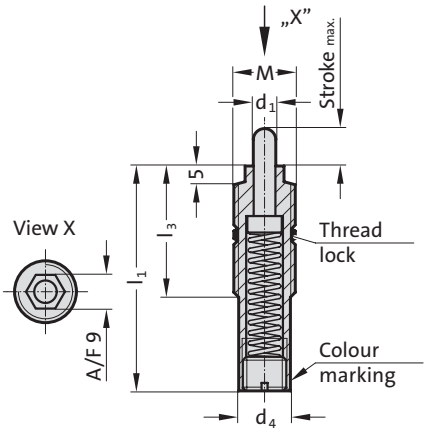
Spring plungers

Spring plunger, standard spring force, VDI 3004, Colour marking: yellow

Mounting example



2470.10. .1



Description:

Spring plungers are used as ejectors, damper pins, fixing and retaining pins in many sectors of the tool-, jig- and fixture-making industries. Assembly requires the use of special FIBRO insertion tool (2470.10.11). The spring-loaded pins are hardened.

2470.10. .1 Spring plunger, standard spring force, VDI 3004, Colour marking: yellow

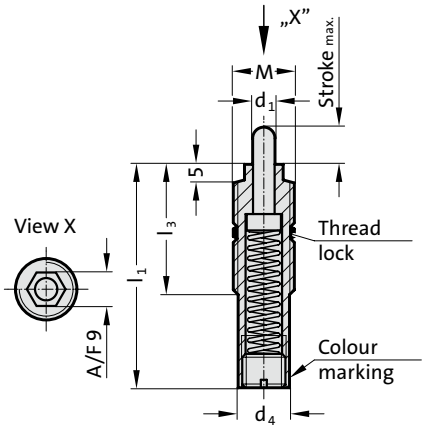
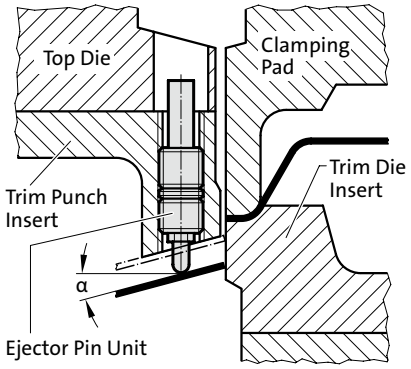
SPRING PLUNGER, LOW MAINTENANCE, STANDARD SPRING FORCE, VDI 3004, COLOUR MARKING: YELLOW

2470.20. .1



Mounting example



Description:

Resilient thrust pieces are used as knock out pins, damper pins, fixing and ejector pins in many sectors of the tool, jig and fixture manufacturing industries. Assembly requires the use of special FIBRO insertion tool (2470.10.11).

The spring pin made from high performance plastic with additives permits lateral loading of max. 15° depending on the stroke length.

Note:

Working temperature: 0 °C to +80 °C
Max. recommended extensions per minute: approx. 120 (at 20 °C)
Max. piston speed: 1.6 m/s

2470.20. .1 Spring plunger, low maintenance, standard spring force, VDI 3004, Colour marking: yellow

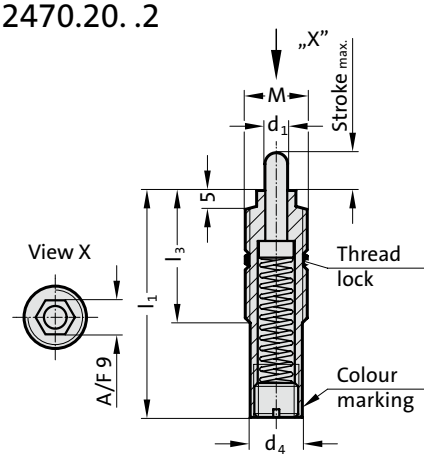
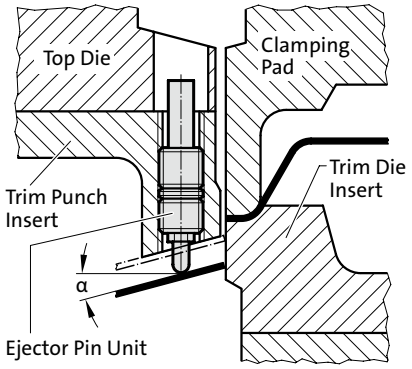
SPRING PLUNGER, LOW MAINTENANCE, INCREASED SPRING FORCE, VDI 3004, COLOUR MARKING: RED

2470.20. .2



Mounting example



Description:
Resilient thrust pieces are used as ejectors, damping pins as well as hold-down and ejector pins in the widest range of applications in tool, equipment and machine engineering. Assembly is carried out using a FIBRO insertion tool (2470.10.11).
The low-maintenance guide means that there is a maximum permitted side load of up to 15° depending on the stroke length.

Note:
Working temperature: 0 °C to +80 °C
Max. recommended extensions per minute: approx. 120 (at 20 °C)
Max. piston speed: 1.6 m/s

2470.20. .2 Spring plunger, low maintenance, increased spring force, VDI 3004, Colour marking: red

Material:
Sleeve: Nirosta 1.4305
Ball: Nirosta, hardened
Spring: Nirosta

Note:
For locking and for pressing upwards or downwards.
Admissible temperature range: max. 250°C
Identification of increased spring force by two longitudinal marks on the sleeve.

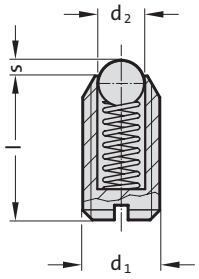
Spring plunger, with spring loaded ball, with slot, standard spring force

2471.05.



Material:
Sleeve: Delrin blue (POM)
Ball: Delrin white (POM)
Spring: Nirosta

Note:
For locking and for pressing upwards or downwards.
Temperature operating range: –30°C up to 50°C

2471.05. Spring plunger, with spring loaded ball, with slot, standard spring force

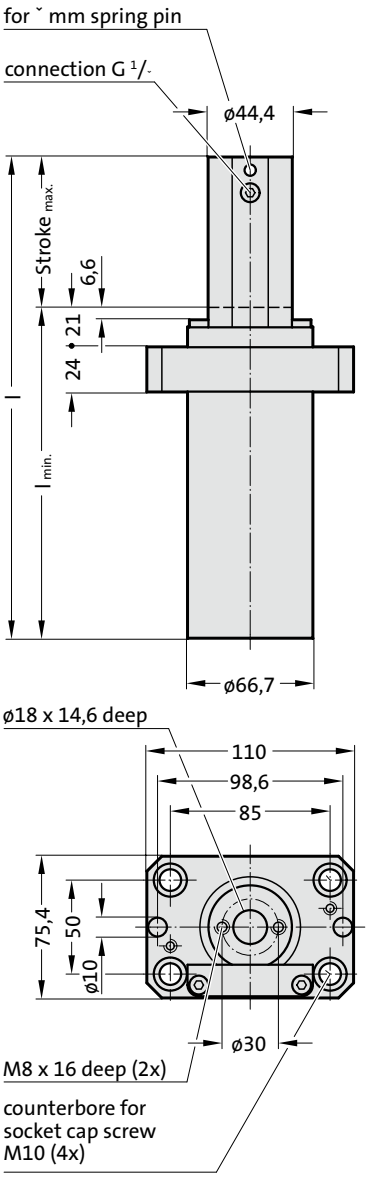
.00200. - 113
.00250. - 141
.00320. - 180

2478.10.

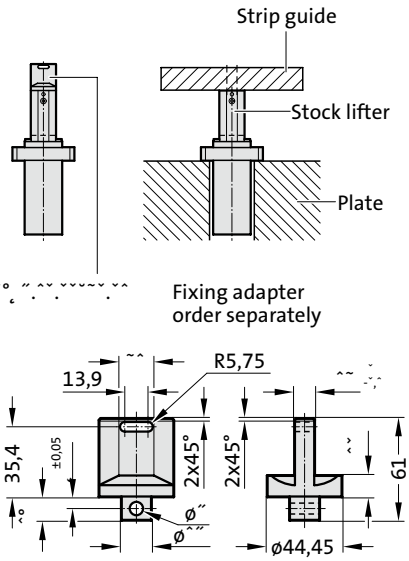


Description:

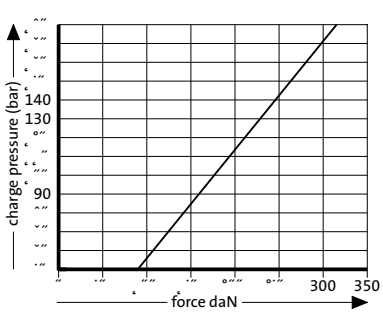
All component lifters in the various gas spring classes are of the same design and the different spring forces are achieved solely by means of different gas pressures.
The pressure can be topped up or reduced via the piston rod.

Note:

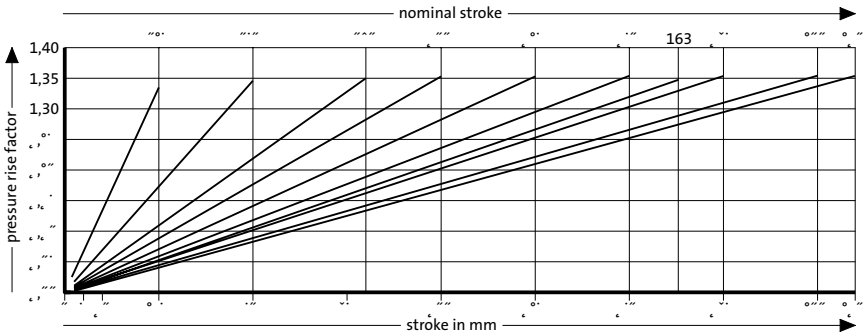
Pressure medium: Nitrogen - N_2
Max. filling pressure: 180 bar
Min. filling pressure: 25 bar
Working temperature: 0°C to +80°C
Temperature related force increase: ± 0,3%/°C
Max. recommended extensions per minute: approx. 80 to 100 (at 20°C)
Max. piston speed: 1,6 m/s
Order No for spare parts kit: 2478.10.00320
Spring forces as per spring diagram.
Upon customers request, also available unfilled, Order No 2478.10.00000....



Initial spring force
versus charge pressure



Spring force Diagram displacement versus stroke rise



Pressure rise factor accounts for displacement but not external influences!

Stock lifter

Description:
The cylinder base can be used for topping up and reducing gas pressure and for inter-connection arrangements.

Note:
Stocklifters are equipped with a “PowerLine” 2487.12.00170. gas spring with no option for wear compensation, so complete replacement is required.

Initial spring force: 170 daN
Pressure medium: Nitrogen – N_2
Max. filling pressure: 180 bar
Min. filling pressure: 25 bar
Working temperature: 0°C to +80°C
Temperature related force increase: ± 0,3%/°C
Max. recommended extensions per minute: approx. 40 to 100 (at 20°C)
Max. piston speed: 1,6 m/s
Max. usable stroke: 100%

Spring forces as per spring diagram.

Stripper

Description:

The stripper is used for stripping 2478.30.00170.3 of sheet metal parts after the forming operation (eg folding functions). Gas refill, reduce and composite assembly are possible over the cylinder tube sheet.

Note:

Strippers are equipped with a “Power Line” 2487.12.00170. gas spring with no option for wear compensation, so complete replacement is required.

Initial spring force: 170 daN
Pressure medium: Nitrogen - N_2
Max. filling pressure: 180 bar
Min. filling pressure: 25 bar

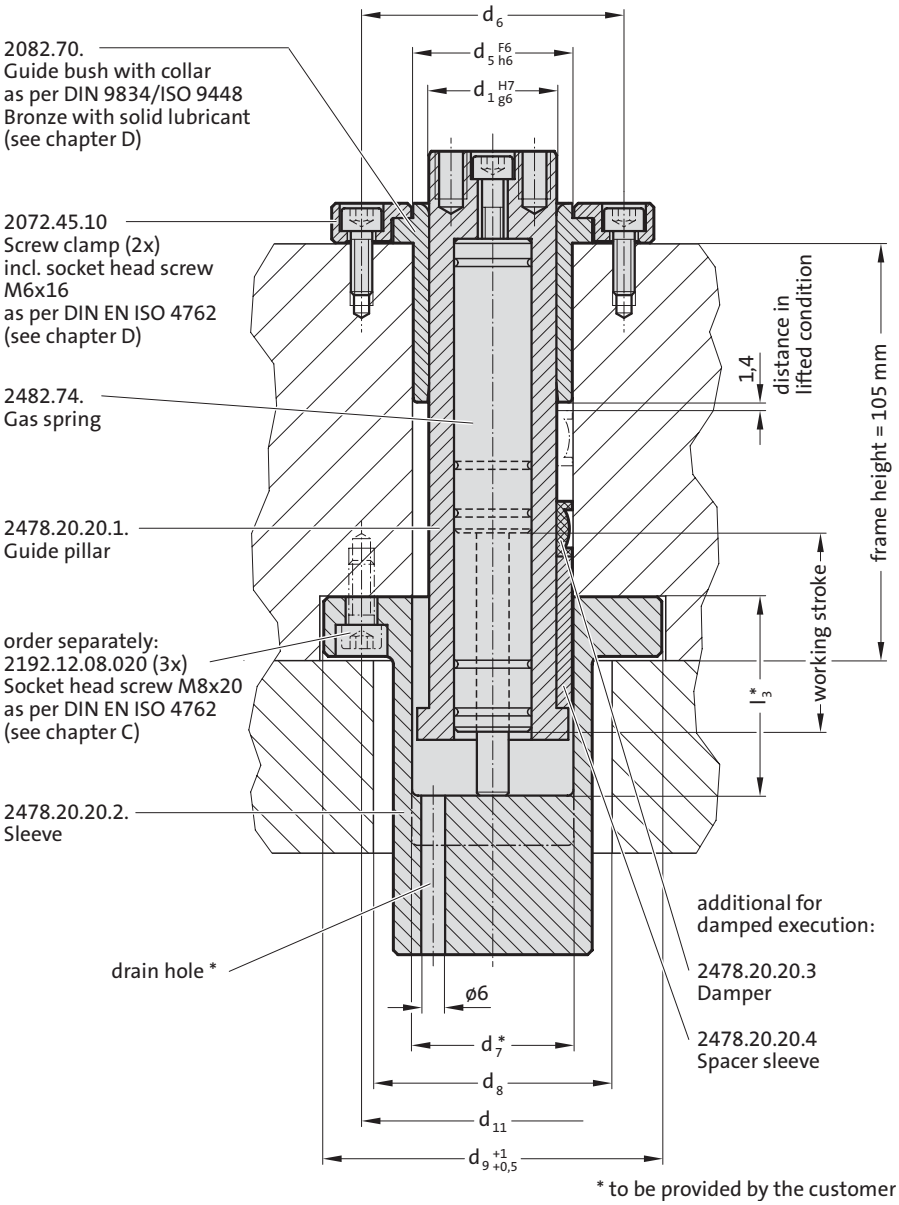
Lifting unit (not damped/damped) to Mercedes-Benz

2478.20.20.



Note:

Frame height = 105 mm

Depending on the frame height and the installation type of the sleeve 2478.20.20.2. (l_3 - tapped bore in the frame or cut-out in the cast), the countersink varies for the determination of the lifting path.

Size 2* - type, damped

Maximum lifting path 66 mm
Lifting path 66 mm; Distance height 0 mm
Lifting path 30 mm; Distance height 36 mm

Size 3* - type, damped

Maximum lifting path 80 mm
Lifting path 80 mm; Distance height 47 mm
Lifting path 70 mm; Distance height 57 mm

In order to maintain the clearance of 1.4 mm in a raised state (dampener to bushing), a distance sleeve is to be used between the damper and guide post flange.

* Distance height determined at the customer (deliver length: 61 mm).

2478.20.20. Lifting unit (not damped/damped) to Mercedes-Benz

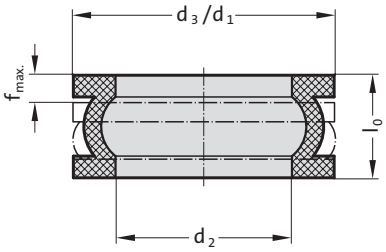
2478.20.20.2.03	3	85	50	67	150

Damper for lifting units to Mercedes-Benz

2478.20.20.3



Description:

The damper element made of co-polyester elastomer is used in the jacking units in progressive dies in the automotive and white goods industry. Increasing stresses on screws and bolts are reduced by the low stress dampers. Reduced noise emission is also an additional positive side-effect. Two-ply dampers can be used depending on the mass or stroke.

Benefits:
- High absorption of force and energy
- Slight settlement
- Long service life and high level of operating safety
- Noise reduction
- High degree of effectiveness

Material:

Co-Polyester-Elastomer
Available in 55 Shore-D hardness levels.

Technical data:
Surroundings: Resistant to microbes, seawater, chemicals.
No absorption of water and no swelling.
Approved temperature range: -40°C to +90°C (-40°F to +194°F)

2478.20.20.3 Damper for lifting units to Mercedes-Benz

Order No	d_1	d_2	d_3	l_0	$f_{max.}$ in mm	W_3 in Nm/stroke*

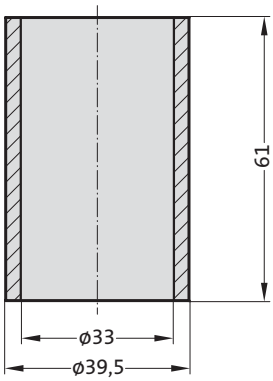
*Total energy per stroke

Spacer sleeve for lifting units to Mercedes-Benz

2478.20.20.4



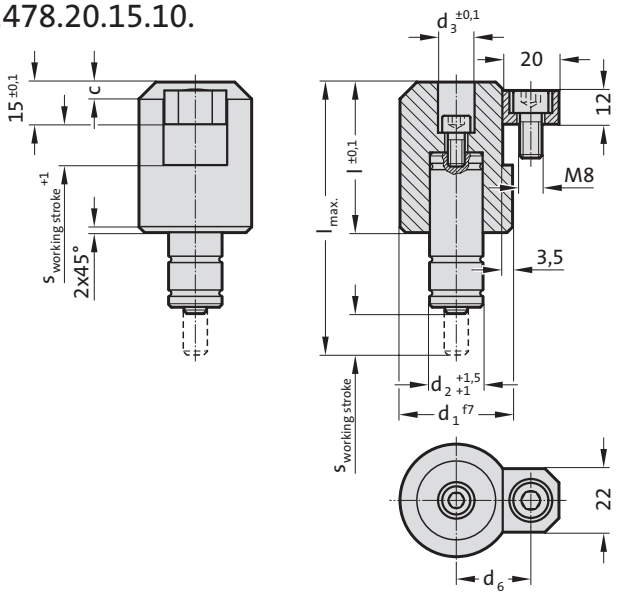
Material:
Steel, hardened

Note:
Height adjustment according to lifting path while using lifting unit 2478.20.20.

2478.20.20.4 Spacer sleeve for lifting units to Mercedes-Benz

Lifter, round with pilot pin hole to BMW standard

2478.20.15.10.



Execution:

Assembly consisting of:

- Lifter
- Gas spring
  – ∅ 19 mm (1) = 2482.74.00090.
  Spring force 90 daN
  or
  – ∅ 25 mm (2) = 2480.21.00200.
  Spring force 200 daN
- Screw clamp,
  incl. Socket head screw M8 × 16 to ISO 4762
- Socket head screw M6 × 12 to ISO 4762

Note:

*$S_{working\ stroke}$ suitable = max. allowable spring stroke minus 10 % stroke reserve of nominal stroke length,
from stroke of 50 mm only max. 5 mm.

on request, gas spring with a lower spring force available.

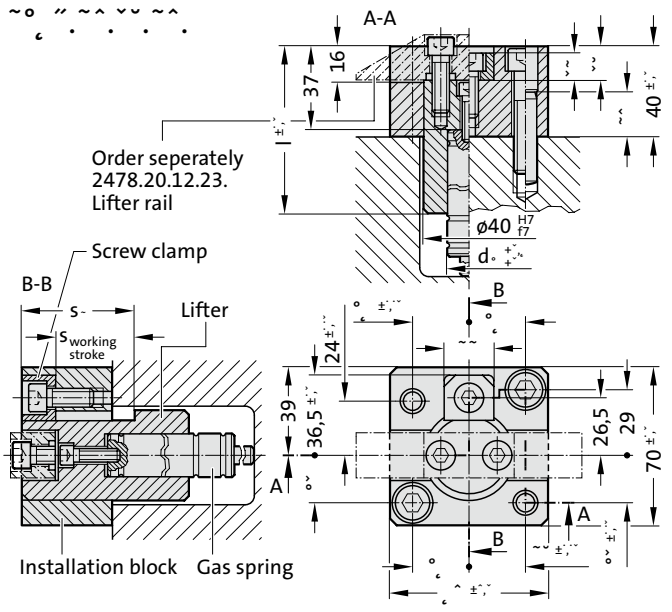
Assembly (lifter with pilot pin hole) to BMW Standard	
lifter, round with pilot pin hole	

Lifter unit with installation block according to BMW standard



Material:
Steel

Execution:
Lifter unit with installation block comprises:
- Installation block
- Lifter
- Screw clamp
- Gas spring 2482.74.00090. or 2480.21.00200.
- Socket cap screw according to ISO 4762
  M6×20 (1x), M8×20 (1x), M8×25 (2x), M10×45 (2x)
- Dowel pin according to ISO 8735 Ø 10×40 (2x)

Note:
Order separately (see installation example)
- 2478.20.15.23.: Lifter rail
- 2478.20.15.24.: Holding sleeve

On request, gas spring with a lower spring force available.

Mounting example

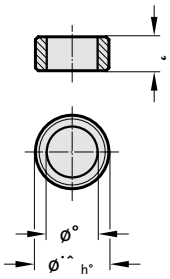
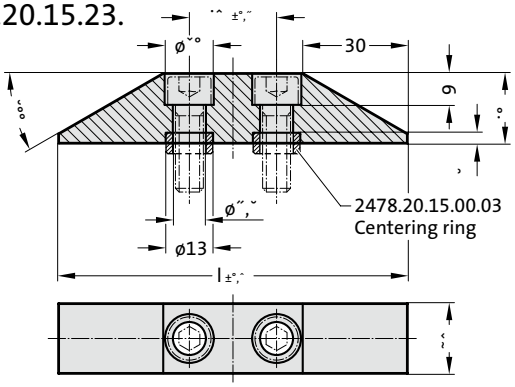
Lifter rail for lifter units to BMW standard
Holding sleeve for lifter units to BMW standard

2478.20.15.00.03
Centrierring
(Order-No. for reordering)



2478.20.15.23.



Material:
Steel

Note:
Delivery without screws and centring rings.

Screws and centring rings are already included in the scope of delivery for the lifter units 2478.20.15.20./30./40.

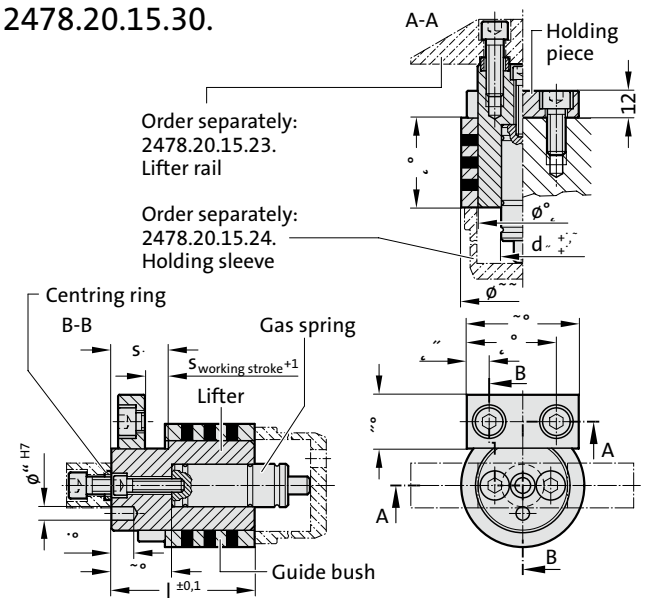
Universal lifter unit, according to BMW standard

2478.20.15.30.



Material:

Steel

Execution:

Universal lifter unit comprises:

- Lifter
- Screw clamp
- Centring rings
- Guide bush
- Gas spring 2482.74.00090. or 2480.21.00200.
- Socket cap screw according to ISO 4762
  M6 × 25 (1x), M8 × 20 (2x), M8 × 25 (2x)

Note:

Order separately (see installation example)

- 2478.20.15.23.: Lifter rail
- 2478.20.15.24.: Holding sleeve

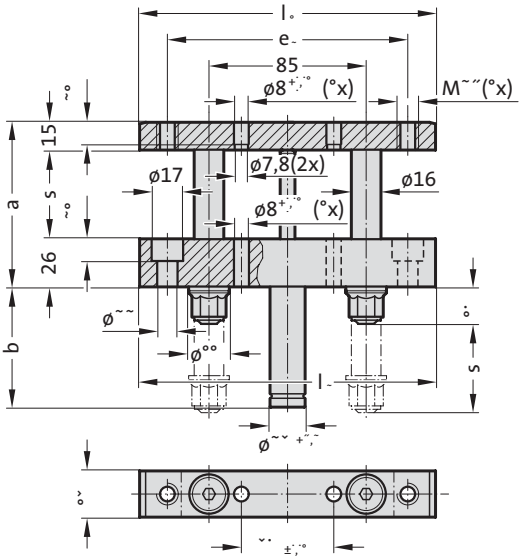
Lifter unit with pillar guidance

2478.25.00090.



Description:

Filling pressure regulation and a composite arrangement are possible using the cylinder tube base. To attach the strip guide on the lifter rail, use the provided threads. We recommend designing the strip guide for a maximum material width of +0.4 mm (0.2 mm for each side) (View X). When several lifter units are used, only one unit per piece should be pinned in order to prevent redundancy.

Note:

The lifter unit is equipped with gas spring type 2482.74.00090, which cannot be repaired in case of wear and must therefore be exchanged completely.

Initial spring force: 90 daN
Pressure medium: Nitrogen N_2
Max. filling pressure: 180 bar
Min. filling pressure: 25 bar
Working temperature: 0°C to +80°C
Temperature related force increase: ± 0.3%/°C
Max. recommended extensions per minute:
approx. 40 to 100 (at 20°C)
Max. piston speed: see diagram
Max. usable stroke: 95%

Spring forces as per spring diagram in Chapter F - 2482.74.

2478.25.00090. Lifter unit with pillar guidance

FIBRO Gas springs

The extensive range of FIBRO Gas springs constitutes an ideal supplement to and expansion of the traditional programmes of spring elements such als helical springs, disc springs and elastomer units. With their minimal space requirement, Gas springs close a gap where ever the accent is on accomodation of the utmot force component within a minimum of space – or where exceedingly large travel is demanded: FIBRO Gas springs take care of both demands, even in combination.

Their self-contained nitrogen charge makes FIBRO Gas springs completely autonomous devices. Feeder pipes or storage vessel are not required.

Monitoring of charge pressure, however, is necessary in certain special cases. Suitable equipment for in-situ pressure control can be found in the Accessories Section.

As long as all mounting detail is laid out with due circumspection, removal and installation of the units presents no problems whatsoever.

Instructions are included with every delivery of Gas springs.

Application examples see at the end of chapter F.

Functioning

The pressure medium is a commercially available, environment-friendly nitrogen. FIBRO Gas springs have a standard charge pressure of max. 150 bar (180 bar). Depending on spring size and type, this pressure offers initial force ratings of 2 daN to 20,000 daN.

Pressure Build-Up

In operation the piston rod enters the spring space whose volume is progressively reduced. The resulting pressure rise can be plotted on the Gas Spring Diagram as a multiplication factor. The spring force is the product of initial force times that pressure-rise factor and can therefore be calculated easily.

Working temperature

The spring temperature should not exceed +80 °C.

Charge pressure

Modification of charge pressure allows variation of the force rating and can be predetermined from the spring Diagram.

Installation

FIBRO Gas springs can be used in any installation position. Whether or not external forces act on them when at rest is of no consequence.

All FIBRO Gas springs meet the requirements of the Pressure Equipment Directive 2014/68/EU .

The Pressure Equipment Directive (2014/68/EU) has been r atified by the European Parliament and the Council of Europe. The requirements of the Pressure Equipment Directive came into force throughout the EU on 29 May 2002.

The directive defines pressure equipment as vessels, pipework, safety devices and pressure accessories. In terms of the Directive a vessel is a casing which is designed and manufactured to contain fluids under pressure.

It follows from this definition that nitrogen Gas springs of all sizes are deemed to be pressure vessels and must in this respect comply with the Pressure Equipment Directive (2014/68/EU) from 29 May 2002.

Maintenance

FIBRO Gas springs were disigned for maintenancefree continual operation. It is recommended to oil the piston rod lightly from time to time.

Guide- and sealing elements can be exchanged easily and expediciously. They are available as a kit. Each kit comes with detailed instructions for maintenance of FIBRO Gas springs.

Attention

When safety functions are triggered (overstroke, return stroke, or overpressure protection), the gas pressure springs can no longer be repaired!

Warning

FIBRO Gas springs may be charged only with commercial Grade 5.0 nitrogen gas.

Accessories

The accessories range for Gas springs comprises fastening devices, charge- and control units, screw connections for these, and connecting lines for compound installations.

FIBRO is not liable if fittings that are not original FIBRO fittings or fastening, accessory, and attachment parts that are not released by FIBRO are used.

Warning signs

These are available on request. The signs should be affixed near the springs in as prominent a position as possible.

WARNING
This tool is equipped with
__ Gas Springs with a max. pressure of
150 or 180 bar, depending on spring type.
Working pressure _____ bar.
Read maintenance instructions before working on gas springs.

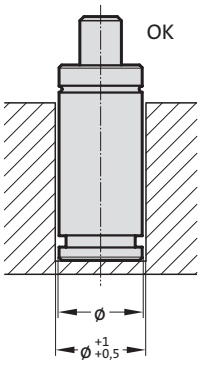
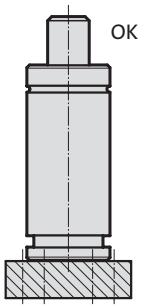
Mounting directions for gas springs

Mounting examples

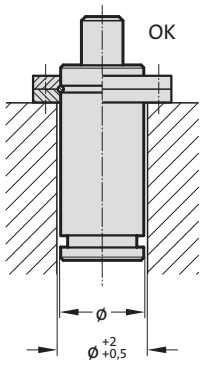
Below are the various gas spring mounting possibilities, which differ from model to model.



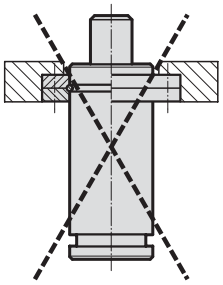
Installed loos in the bore.

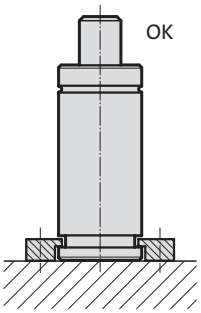


Screw mounted at tha base with 2480.011.

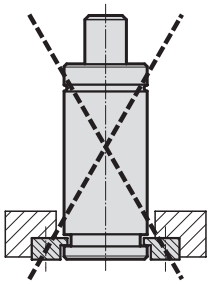


Fixed with 2480.055./057./058./064.

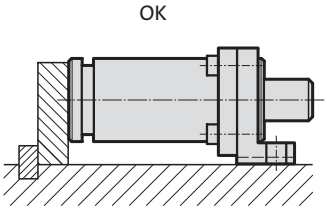


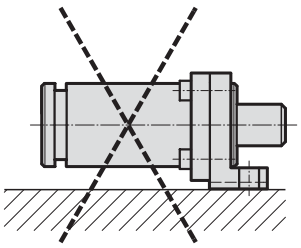


Fixed with 2480.007./008.

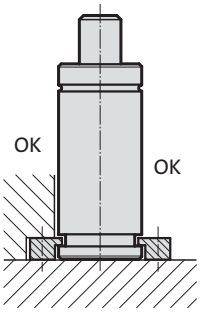


Fixed with 2480.007./008.





Fixed with 2480.044./045./047.

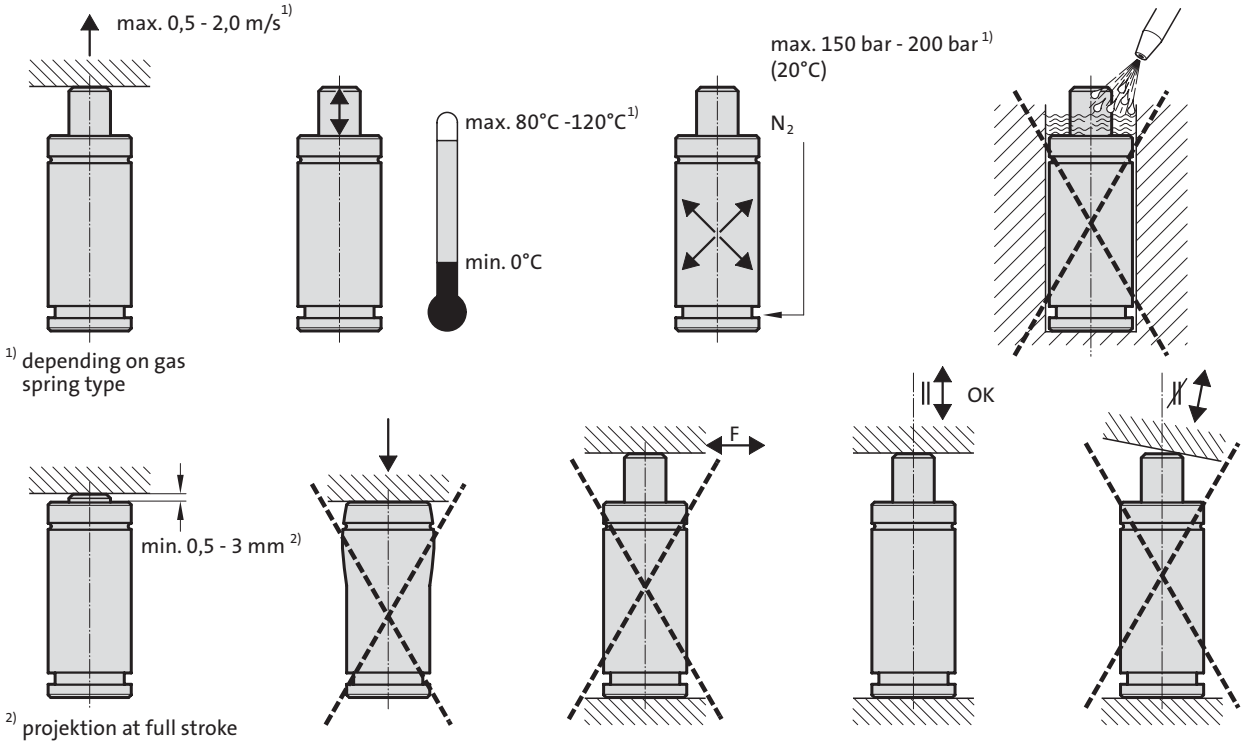


Fixed with 2480.022.

Mounting directions for gas springs

To achieve the best possible service-life and safety from the gas spring, the directions below must be followed.

Mounting instructions



- Secure the gas spring to the tool/machine whenever possible, using the threaded hole(s) in the base of the gas spring or a suitable flange. Never exceed the maximum torque values for the threads in the base of the gas spring: (M6 = 10 Nm; M8 = 24 Nm; M10 = 45 Nm; M12 = 80 Nm)
- The threaded hole in the piston rod top should not be used for mounting purposes. It is only to be used when carrying and servicing the gas spring.
- Do not use the gas spring in such a way that the piston rod is realised freely from its compressed position, as this could cause internal damage to the gas spring.
- Make sure the gas spring is mounted parallel to the direction of the compression stroke.
- Ensure the contact surface of the piston rod top is perpendicular to the direction of the compression stroke and is sufficiently hardened.
- The gas spring should not be subjected to the side loads.
- Protect the piston rod against mechanical damage and contact with fluids.
- We do not recommend the last 5 mm or 10% of the nominal stroke be utilised.
- The maximum charging pressure (at 20°C) must not be exceeded as it may effect the safety of the product.
- Exceeding the gas spring's recommended operating temperature will shorten the service-life of the gas spring.
- The entire contact surface of the piston rod / piston should be used.
- Do not remove bottom 2480./2497.00.20. from spring until all gas pressure has been discharged.

FIBRO-Gas Springs – The Safer Choice
Optimum safety for tools and operators

At FIBRO, safety and reliability are paramount. Particularly when it comes to our gas springs. With their unique range of safety features, FIBRO gas springs are the safest on the market.

FIBRO safety features [1)]

PED approval for 2 million strokes

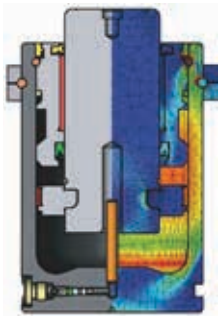
FIBRO gas springs are developed, manufactured and tested for a minimum of 2 million* full strokes in accordance with DGRL 2014/68/EU. The springs deliver this full performance at the maximum permissible limits in terms of filling pressure and operating temperature - even when combined with any of the various mounting types available.

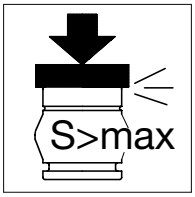
* Calculation value for durability

The benefit for you:

▶ Guaranteed safety and reliability for the entire service life of the spring

Repair kits and qualified training sessions available through FIBRO Service offer increased effectiveness and process reliability.





Overstroke protection

Conventional gas springs can burst in the event of an over-extended stroke. If this happens, parts flying around can become dangerous projectiles.

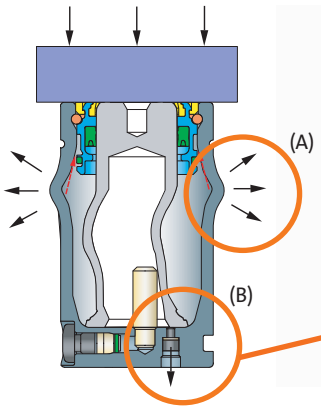
FIBRO gas springs are different:
in the event of an overstroke and depending on the spring type the patented protection system will ensure that either the cylinder wall of the gas spring is deformed in a predefined manner (A) or the piston rod destroys a rupture bolt in the floor of the cylinder (B), thereby allowing the gas to escape into the atmosphere.

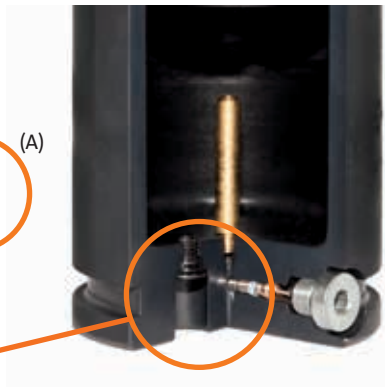
The benefit for you:

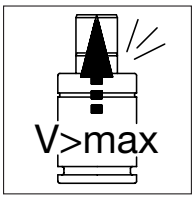
▶ No risk of parts flying around in the event of an overstroke

Possible causes of triggering:

Lack of stroke limitations in the tool/machine and placing the piston rods under a load (e.g. sheet-metal holder, slide reset, etc.), double sheet, incorrect installation position, etc.







Return stroke protection

A particularly dangerous situation can arise with conventional gas springs if tool components become jammed and the pressure on the compressed piston rod is then abruptly released: in this case, the piston rod is then fired out of the cylinder like a missile.

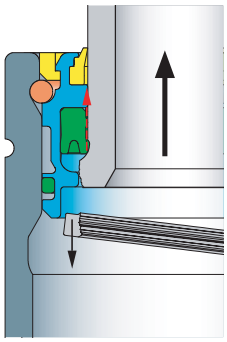
FIBRO gas springs are different:
special guides and a patented safety stop in the piston rods ensure your safety. If the speed is too high during the return stroke, the collar on the piston rod will automatically break. The integrated safety stop then destroys the seal, which allows the gas to escape into the atmosphere and the gas spring to become depressurised.

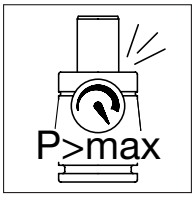
The benefit for you:

▶ No risk of a piston rod firing out if the return stroke is too fast

Possible causes of triggering:

Sudden loosening of jammed components, such as sheet-metal holder, slide, ejector, scraper function, etc.





Overpressure protection

Conventional gas springs can burst if the internal pressure rises above a maximum permitted value. If this happens, parts flying around can become dangerous projectiles.

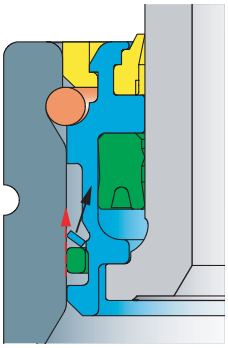
FIBRO gas springs are different:
if the pressure rises above the maximum permitted value, the safety collar on the sealing set is automatically destroyed. The gas then escapes into the atmosphere and the gas spring is depressurised.

The benefit for you:

▶ No risk of bursting parts in the event of overpressure

Possible causes of triggering:

Incorrect filling (max. filling pressure 150 or 180 bar, nitrogen), infeed of liquid operating material, etc.



After a protection function is triggered, the spring cannot be repaired and can no longer be used. It must be replaced completely.

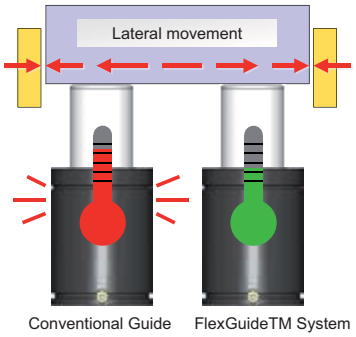
[1)] The safety features mentioned here have been implemented – with few exceptions – on all FIBRO gas springs.
Please refer to the relevant data sheets to check the current safety equipment which is provided with the gas spring you are interested in, or contact FIBRO GmbH directly for more information.

Gas springs – The Safer Choice

FIBRO reliability features

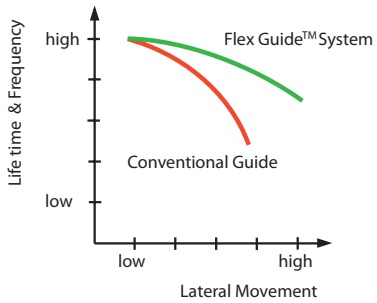
Flexible guides: The Flex Guide™ System

The Flex Guide™ System is a flexible guide in the gas spring which absorbs lateral movements of the piston rod. It minimises friction and lowers the operating temperature.



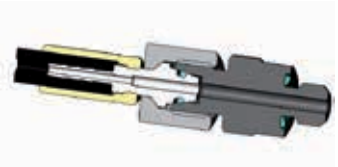
The benefits for you:

- **Extended service life**
- **Increased stroke frequency, i.e. more strokes per minute**



Safe hose connections: The Dual Seal™ System

The FIBRO Dual Seal™ System combines a metal seal with a soft elastomer seal. On hose connection systems, the system provides two leak-tight connections and prevents rotation.

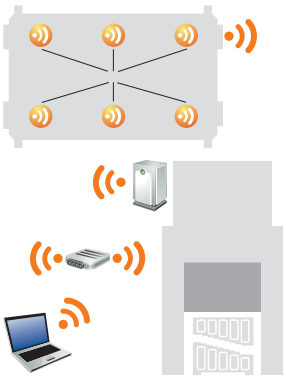


The benefits for you:

- **Leak-tight connection, even under vibrations**
- **High process reliability**
- **Minimised tool down time**
- **Simple installation thanks to anti-rotation function**

Wireless monitoring: The Wireless Pressure Monitoring (WPM) System

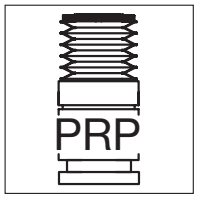
The optional Wireless Pressure Monitoring System (WPM) (patent pending) wirelessly monitors the pressure and temperature of FIBRO gas springs. Before a defective part is produced, the press operator receives a message from the WPM and can take appropriate action.



The benefits for you:

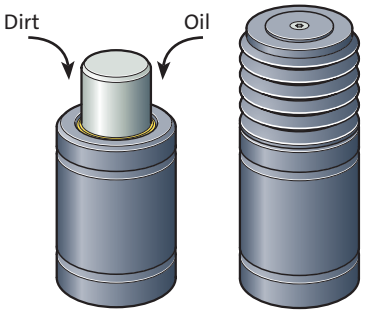
- **Preventative quality assurance**
- **High process reliability**
- **Minimised tool down time**
- **Reduced maintenance and costs**

Potential faults are individually displayed. As a result, service intervals can be extended.
Maintenance and repair costs are reduced.



Protected piston rods: FIBRO Concertina Shrouds

The FIBRO Piston Rod Protection (patented) reliably protects the piston rods in gas springs against dirt, oil and emulsion. In this way, the system prevents damage to the piston rod surface and leaks at internal seals.



The benefits for you:

- **Significantly longer service life for gas springs under harsh operating conditions**

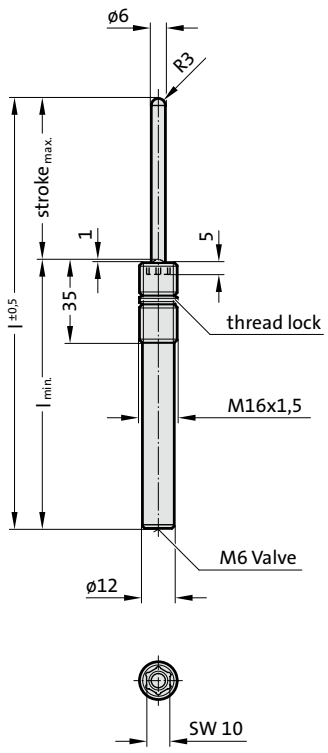
Gas springs (Spring plungers)

Gas spring (Spring plunger), with hexagon socket, VDI 3004

2479.030.



Description:

Spring plungers are used as ejectors, damper pins, fixing and retaining pins in many sectors of the tool-, jig- and fixture-making industries. Assembly requires the use of special FIBRO insertion tool (2470.12.010.017).

Note:

Worn gas springs cannot be repaired, they have to be replaced completely.

Pressure medium: Nitrogen - N_2
Max. filling pressure: 150 bar
Min. filling pressure: 6 bar
Working temperature: 0°C to +80°C
Temperature related force increase: ± 0.3%/°C
Max. recommended extensions per minute: approx. 100 (at 20°C)
Max. piston speed: 1.6 m/s

Upon customers request, also available unfilled, Order No 2479.030.00000...., Colour: black

[2] Hexagon nut order supplementary: 2479.004.016.15 (M16 x 1,5)

APPROVED PED 2014/68/EU

.00080. - 75 - red
.00170. - 150 - yellow

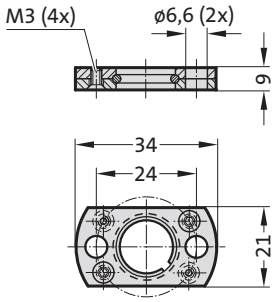
Gas spring, small dimension, low force

Gas spring, small dimension, low force
Mounting variations

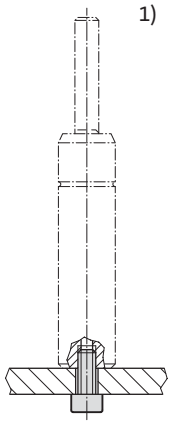
2480.051.00013

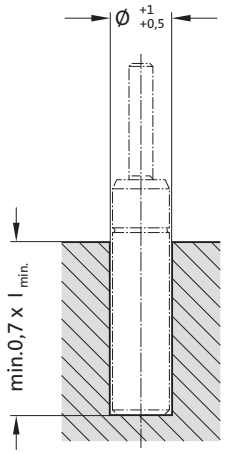


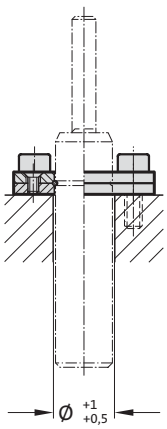
Note:

[1] Fixing at bottom thread only recommanded for stroke length up to 25 mm.

Mounting examples:







Gas spring, small dimension and low force

Description:

The gas springs are colour-coded according to the spring force rating ranges 13-25-38-50 daN.

All springs, regardless of their spring force ratings, are of the same design. The differing force ratings result exclusively from the differing charge pressures.
Gas can be added or reduced from below.

Note:

Worn gas springs cannot be repaired, they have to be replaced completely.

Pressure medium: Nitrogen N_2
Max. filling pressure: 180 bar
Min. filling pressure: 20 bar
Working temperature: 0°C to +80°C
Temperature related force increase: ± 0.3%/°C
Max. recommended extensions per minute: approx. 40 to 100 (at 20°C)
Max. piston speed: 1.6 m/s

Spring forces as per spring diagram.

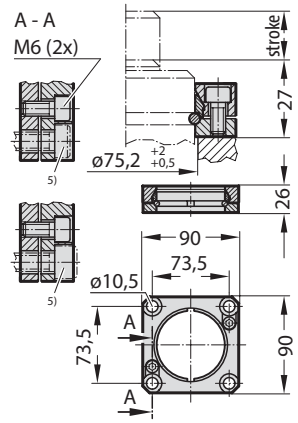
2480.064.01500[4)]

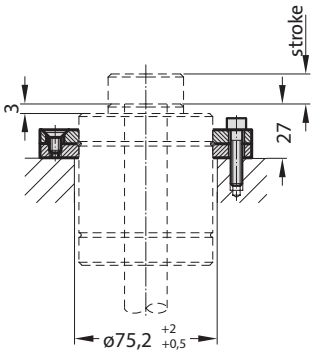


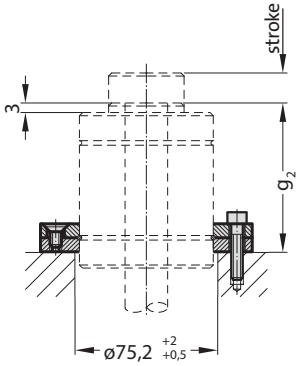
Notes:

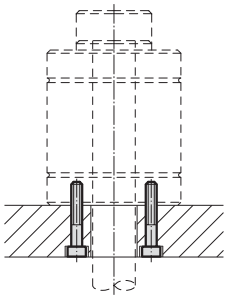
[4)] Square collar flange, non-rotating, fixing for composite connection.

[5)] Machine screws with hexagonal socket (compact head recommended).

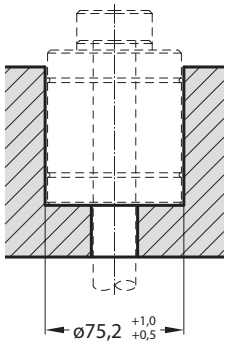
Mounting examples:







see Note!



Gas spring with through bore passage

Note:

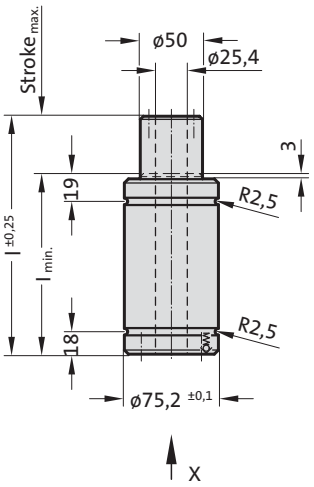
Initial spring force at 150 bar = 1060 daN

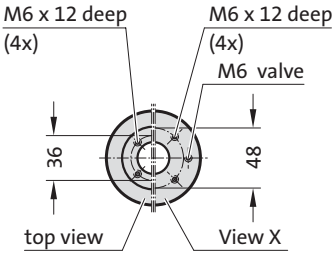
When mounting to floor, contact over the entire floor of the cylinder tube must be ensured!

Order No for spare parts kit: 2496.12.01060

Pressure medium: Nitrogen N_2
Max. filling pressure: 150 bar
Min. filling pressure: 50 bar
Working temperature: 0°C to +80°C
Temperature related force increase: ± 0.3%/°C
Max. recommended extensions per minute: approx. 15 to 40 (at 20°C)
Max. piston speed: 0.5 m/s

2496.12.01060.





APPROVED PED 2014/68/EU

»Speed Control™«, Gas springs, SPC, cushioned

SPC gas spring, cushioned

Description

FIBRO SPC gas springs »Speed Control™« have been engineered to reduce or eliminate blank holder bounce; commonly associated with increased return stroke speeds form link drive presses.

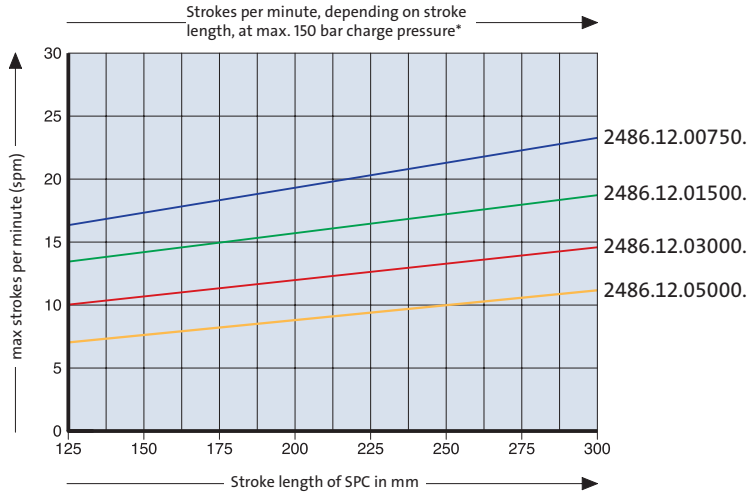
SPC gas springs have inbuilt return stroke speed dampening, which decelerates the last 30 mm of piston rod stroke to 0.4 m/s, helping to bring the blank holder to a smooth stop.

Benefits of the »Speed Control™« SPC gas springs, cushioned:

- Eliminates blank holder bounce
- Increases productivity by more increasing part transfer efficiency.
- Easily retrofitted to existing dies
- Stroke lengths 125 to 300 mm.
- Linkable using hose system.

SPC gas spring, cushioned

Performance



The diagram shows the max. possible number of strokes per minutes [min^{-1}] of SPC gas springs with a max. filling pressure (150 bar) and max. used stroke lengths before there is a risk of excessive heating.

Note !

The number of strokes per minutes can be doubled by halving the initial filling pressure.

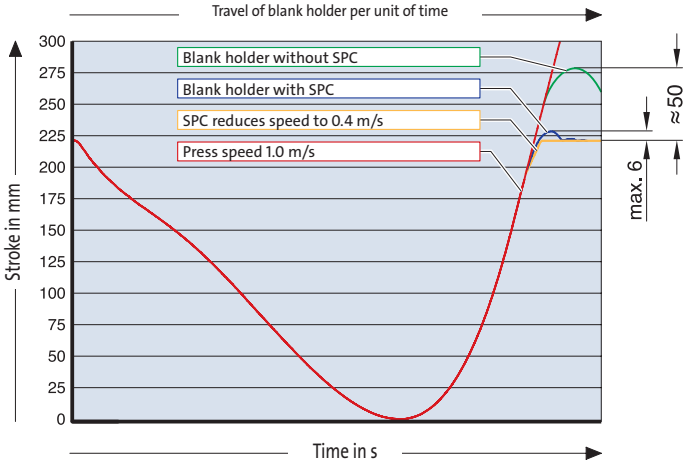
Caution !

SPC gas springs are subject to a higher heating than standard gas springs.

For this reason, please ensure adequate ventilation of the SPC gas springs in the tool.

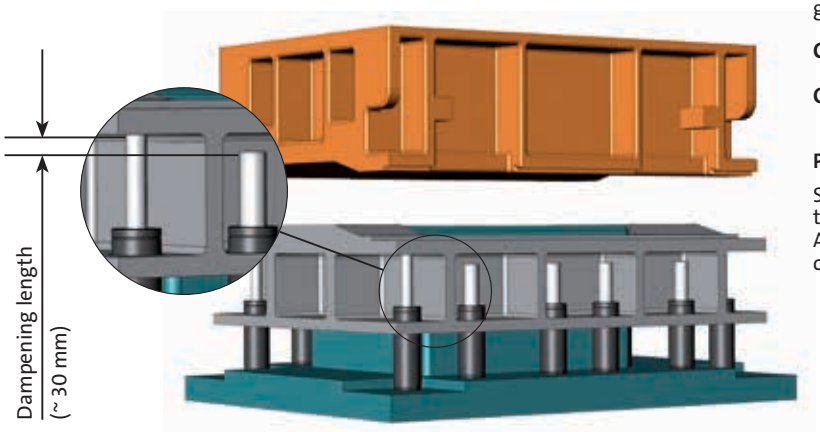
*At ambient room temperature with free air flow

Function example



››Speed Control™‹‹ SPC gas springs gave a 90% reduction of blank holder bounce.

Installation



It is important that approx. 25 to 30 mm before the sheet metal retainer has reached its home position, only SPC gas springs are applied. Therefore, for the retrofitting of existing tools with SPC gas springs we recommend the following two options:

Option 1 – replace all gas springs with SPC gas springs

Option 2 – corner solution (see below)

Please note:

Springs must be installed with a recess of 25 mm to balance the total length difference (2 x stroke length = 50 mm).
Alternatively, the contact surface of the sheet metal retainer can be recessed in order to achieve the same effect.

GAS SPRING, DS FOR DIE SEPARATION

GAS SPRINGS, DS, FOR DIE SEPARATION

Description:

In line of reducing the set-up time while installing the tool in the press there are used autonomous acted gas springs for tool spacing.
While using conventional gas springs they are activated with every press stroke about the whole stroke length.
The new FIBRO gas spring, DS (Die Separation) have been developed especially for tool spacing.
Because of the slow return stroke speed, the gas spring DS does not need the total stroke length.
The FIBRO gas spring, DS minimises unwanted friction in the tool, press and in the gas spring itself.
A further benefit is that they use up to 80% less energy than "conventional" standard gas springs.

Properties:

- Initial spring forces of 3000 daN to 7500 daN
- Stroke lengths of 50 mm to 300 mm
- Standardised dimensions in accordance with ISO, VDI, CNOMO
- Very slow return stroke speed 0.2 m/min.
- Standard safety features (FIBRO Safer Choice)
  - Safety piston rod
  - Excess pressure protection
  - Overtravel protection
- High flexibility during fixing from the top mounting notch and lower fixing groove, together with the tapped bores in the spring base

Function:

When conventional standard gas springs are used to distance the upper and lower parts of the die, additional initial forces are exerted on each stroke carried out. This force can increase further at the end of the stroke (see diagram 1). When using the "new" DS gas springs in the same application, the force is reduced to less than 10% for each stroke (diagram 2).
The return stroke speed of the gas springs DS is very slow. The duration of the complete return stroke is 1-2 minutes. However, this slow speed has no negative influence on the end position (gas springs fully extended). The piston rod is actuated oscillating up to 10% of the total stroke depending on the production rate.

Pressure medium: Nitrogen N_2
Max. filling pressure: 150 bar
Min. filling pressure: 50 bar
Working temperature: 0°C to +80°C
Temperature related force increase: ± 0.3%/°C
Max. recommended extensions per minute: approx. 80 to 100 (at 20°C)
Max. piston speed: 1.6 m/s

Fixing:

Installation with ring nut(s) 2480.005.00250 can be done with one or two ring nuts. If the hole in the bolster plate is not threaded, two ring nuts are needed. Holes threaded M 38 × 1,5 require one only ring nut for mounting of the gas springs.
Mounting with a threaded flange plate has the advantage of a degree of adjustability as far as the flange screws permit, moreover it is often found easier to make do with a clearance hole in the tool plate. Locking is by way of two lock screws with thrust plugs, provided in the threaded flange.
Diameter of through-hole in tool plate = 38 mm – plus four tapped holes M 8.

Gas springs Mould Line

LCF gas springs, damped

LCF gas springs, damped

Description

The LCF series represents a whole new generation of nitrogen-filled gas springs developed to meet the needs of the machine tool and press-making industries.

Negative factors such as

- high impact stresses
- excessive noise
- extreme bounce off the pad

are all minimised by LCF springs.

Characteristics such as

- dimensions
- fixing methods
- filling with gas and purging
- working in interconnected systems

are identical to those for standard ISO or type 2480.13 gas springs.

The springs from the LCF series reduce impact stresses by 50% compared to conventional gas springs.

The force builds up gradually and acceleration is uniform, reducing wear on both tool and press. As a result, less maintenance is required.

LCF springs are at least 20% quieter than standard gas springs.

The reduced noise level is due to the lower impact force, making these springs a cost-effective alternative to soundproofing panels. They are thus more economical and environmentally-friendly.

The LCF springs reduce the extreme bounce off the pad during the return stroke, thus lessening vibration on the workpiece and allowing the workpiece to be transported more effectively.

Since the spring travel is damped, the pad motion is more uniform, so in many cases the press stroke rate and thus productivity can be increased.

* LCF Force Manager ist ein Warenzeichen der Associated Spring

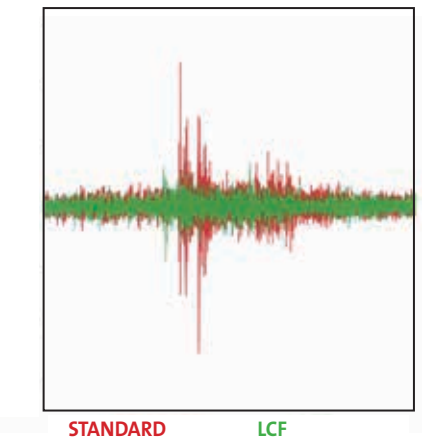
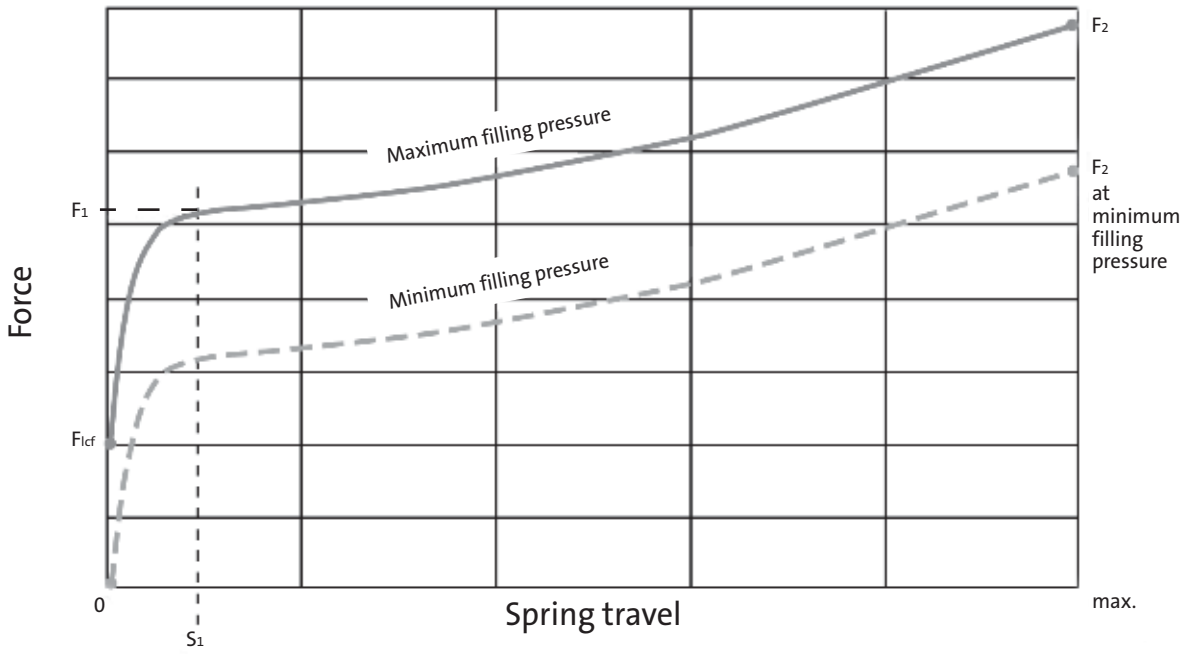
Noise reduction



The springs from the LCF series are quieter due to the reduced impact force.

LCF gas springs, damped

2484.13. Force diagram for gas springs



Note: Maximum pressure for LCF gas springs: 150 bar. Observe minimum filling pressure.

Guidelines for the use of LCF gas springs

1. After the damped spring travel (S_1) the LCF gas spring achieves the same initial spring force (F_1) and pressure build up as the standard gas spring (to ISO).
2. The spring force (F_{lcf}) should exceed the weight (e.g. the pad) by at least 15% so that it is held in the correct position (this does not apply in the case of minimum filling pressure).

Spring Size	F_{lcf} bei 150 bar in daN	Damped spring travel S_1	Minimum filling pressure in bar
2484.13.00750.	470	3,1	70
2484.12.01500.	700	4,6	105
2484.13.03000.	1600	3,8	69
2484.13.05000.	2500	7,7	76
2484.13.07500.	3000	10,4	90

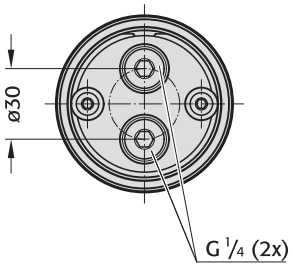
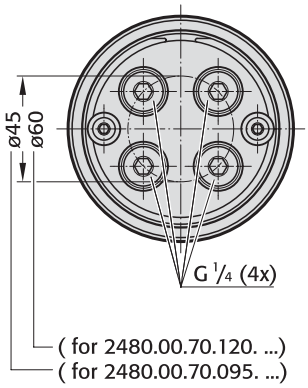
Pressure reservoir
for reduced pressure rise

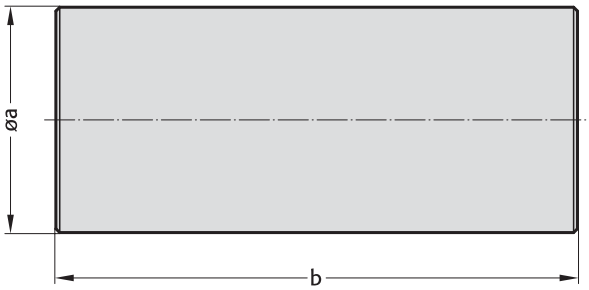
2480.00.70.

Base plate for
for 2480.00.70.075. ...



Base plate for
for 2480.00.70.095. ...
for 2480.00.70.120. ...





Description:

The pressure reservoir and its base plates are manufactured from the same high grade steel als FIBRO gas springs. The advantage of including a pressure reservoir in the system is that in operation the gas pressure rises to a lesser extent. Apart from the purely tecnical pressure factors, a reduced pressure rise is beneficial to the service life of the system.

Function:

The pressure reservoir has two or four mounting holes with G¼“ at both sides, which are designed for connection to the control fitting or gas spring.

Note:

If a pressure reservoir is to be installed, we recommend the 24°-cone-system, which ensures that the gas flow is not inhibited. Mounting clamps should be ordered separately. At least 2 are required for each pressure reservoir, see following pages.

2480.00.70. Pressure reservoir

Order No.	Volume in l [litres]	∅a	b
2480.00.70.075.0170	0,25	75	170
2480.00.70.075.0250	0,50	75	250

Calculating the isothermic increase in pressure*

(*by approximation)

$$\text{Pressure increase} = \frac{V_a+(n\times V_g{}^{1)})}{V_a+(n\times(V_g{}^{1)}-\text{Stroke}\times A))}$$

V_a	[l]	Volume of pressure reservoir, see table
$V_g{}^{1)}$	[l]	Gas volume of gas springs, appropriate spring types
		[1)] Note: When designing gas volume of spring types, please contact us at FIBRO.
Stroke	[dm]	Travel of gas springs, appropriate spring types
A	[dm²]	For area of piston rods of the gas spring, see table
n		Number of gas springs

Calculation example:

10 gas springs, type 248.13.05000.050 with a travel of 50 mm (0,5 dm) are connected to a system with an 8 litres pressure reservoir.

$$\text{Pressure increase} = \frac{8\text{ l} + (10\times 0{,}51\text{ l})}{8\text{ l} + (10\times(0{,}51\text{ l} - 0{,}5\text{ dm} \times 0{,}332\text{ dm}^2))} = 1{,}145$$

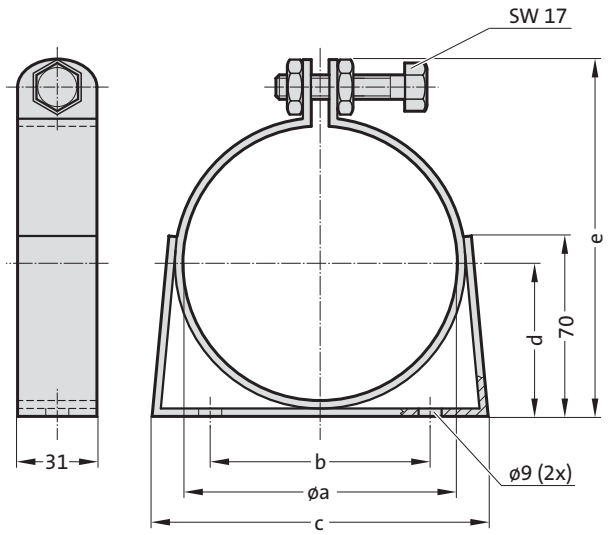
Mounting clamp
for pressure reservoir

2480.00.70.



Description:

The mounting clamp is a rubber coated galvanised sheet steel ring and is used for mounting the FIBRO pressure reservoir.

Important:

At least 2 fixing clamps are required per pressure reservoir. If the pressure tank is to be mounted vertically,
it should be seated on a robust base.

Ordering Code (example):

Mounting clamp (1)	
for pressure reservoir	= 2480.00.70.
Øa = 75 mm	= 075
Order No.	= 2480.00.70.075

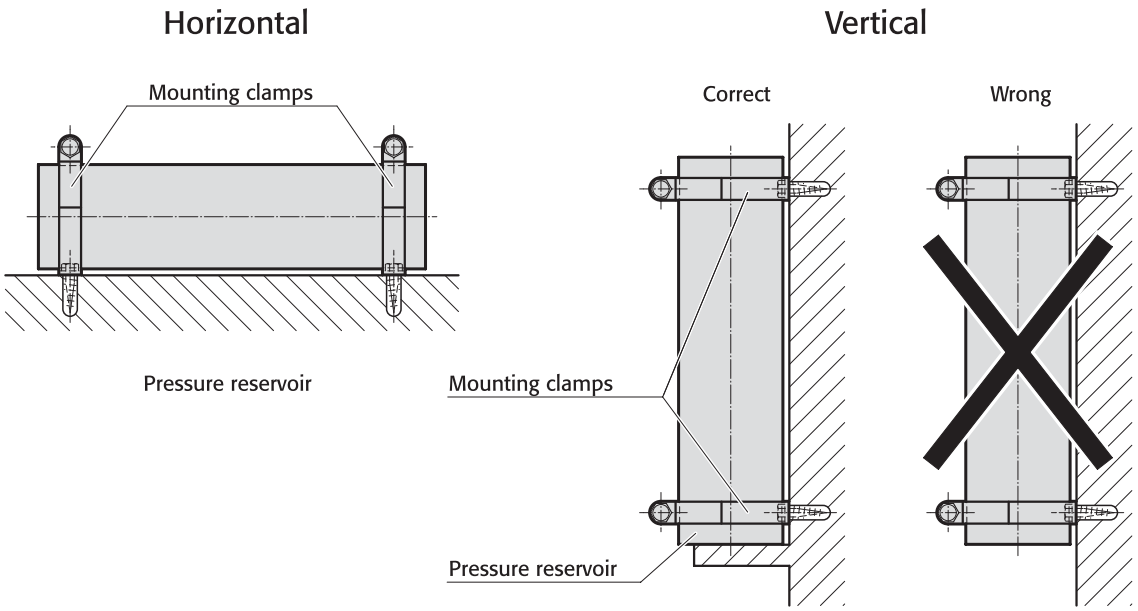
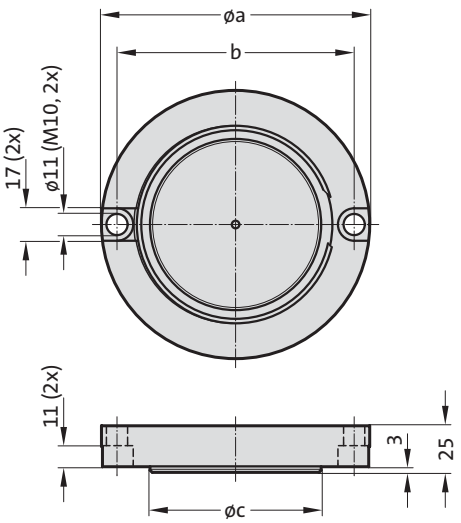
2480.00.70.120	120	100	145	64	147

Installation Example:

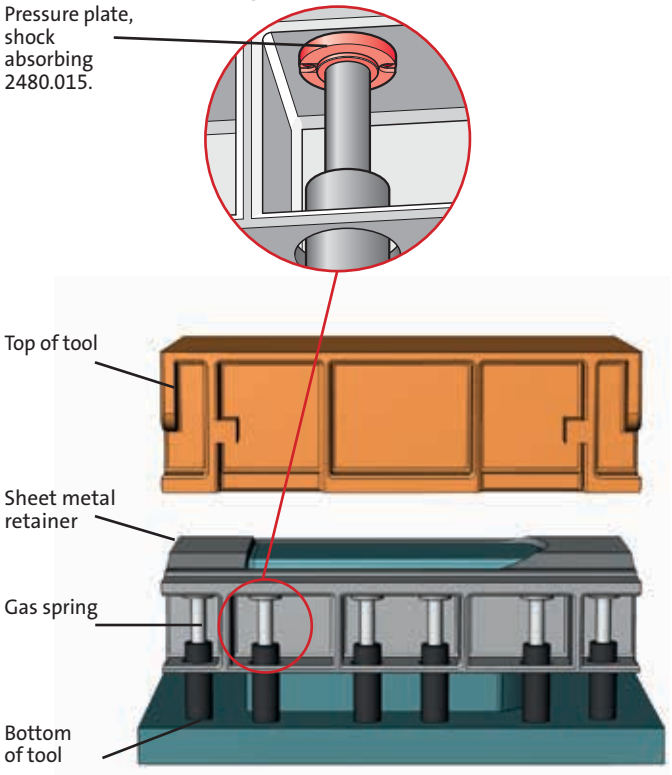


Pressure plate, shock absorbing

2480.015.



Installation example



2480.015. Pressure plate

Order No.	Gas spring strength	a	b	c
2480.015.01500	750 – 1500	108	91	58
2480.015.05000	> 1500 – 6600	143	126	92
2480.015.10000	> 6600 – 10600	167	150	112

Description:

The shock absorbing pressure plate is designed to minimise the main problems in the metal forming industry.

A specially designed shock absorbing unit is designed to reduce:
– extreme impact loads
– consequent high costs for press maintenance
– high noise levels
– risk of production of lower quality parts.

Guidelines for using shock absorbing pressure plates with gas springs:

1. After the maximum shock absorbing travel of 3 mm the gas spring will reach the same initial spring force as it would without the shock absorbing pressure plate.
2. The shock absorbing pressure plate is mounted between the tool and the piston rod of the gas spring.

Material:

Steel, nitride
Polyurethane

Note:

Working temperature:	0 °C to 80 °C
Recommended max. strokes/min:	20
Max. press speed:	1.6 m/s
Max. shock absorbing travel:	3 mm

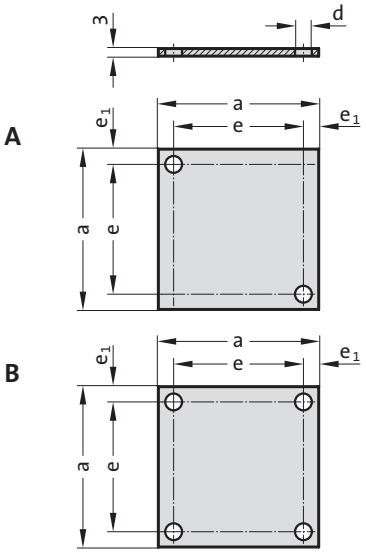
2480.019.45.

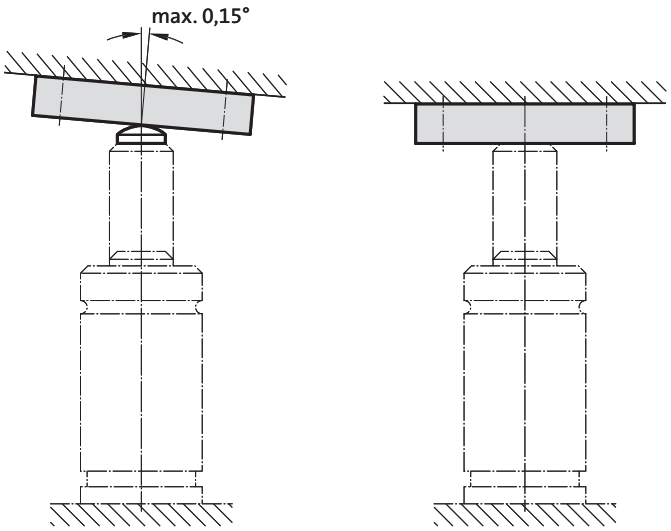


Description:
The hardened thrust pad 2480.004. reduces side forces in cases of skew thrust vaces or lateral displacement component.

In conjunction with the thrust pads, the hardened thrust plates 2480.009., 2480.018. and 2480.019. further helps to protect the gas spring from lateral forces, through reduction of friction – even when used without the thrust pad.

Note:
Especially with gas springs of large stroking capacity we recommend the use of the pad plate combination!

Mounting example:



Concertina shroud for gas springs

Description:

The concertina shroud protects the piston rod of the gas spring against negative influences, such as e.g.:

- drawing in dirt
- damage to the surface of the piston rod
- adhesion of dirt particles
- drawing in of oil and/or emulsion

The concertina shroud is internally (cylinder tube side) fastened and is free of any obstructing contours, such as externally mounted tube clamps. This enables fastening and installation of the gas spring inside the tool without any restrictions.
The concertina shroud for gas springs prolongs the lifetime of the gas springs under rough operating conditions.

Technical data

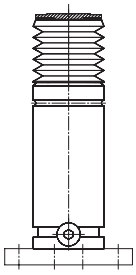
Material	Concertina shroud:	CSM-Rubber 65 ±3 Shore A
	Disc:	Steel burnished
	Ring:	stainless Steel
Temperature range:		0-90 °C
Chemical resistance	Acids:	very good
	Alkaline solutions:	very good
	Solvents:	sufficient
Weather resistance	Sun light (UV):	good
	Ozone:	very good
	Water:	sufficient
Oil resistance	Mineral:	good
	Synthetic:	sufficient

Delivery:

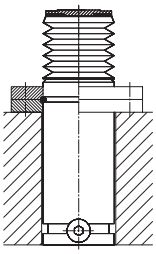
Concertina shroud incl. rotatable disk and countersunk screw.

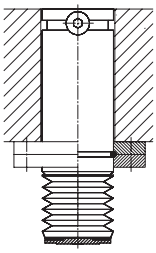
Custom dimensions/materials available on request.

Mounting examples

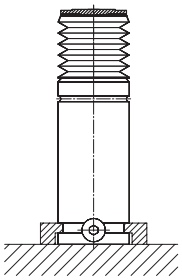


screw mounted at the bottom with 2480.011.

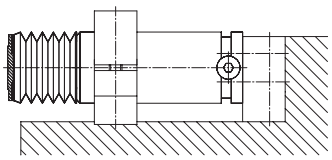




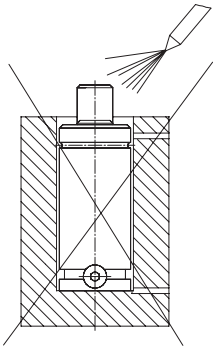
fixed with 2480.055./057./064.

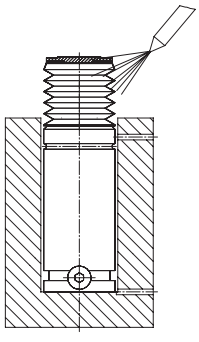


fixed with 2480.007./008.



fixed with 2480.044./045./047.





installed loose in the bore

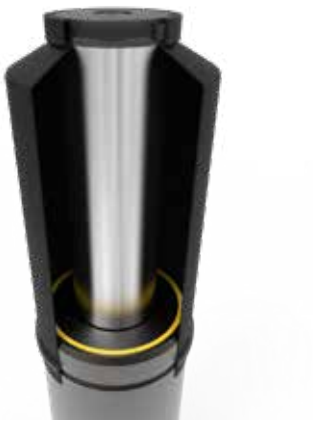
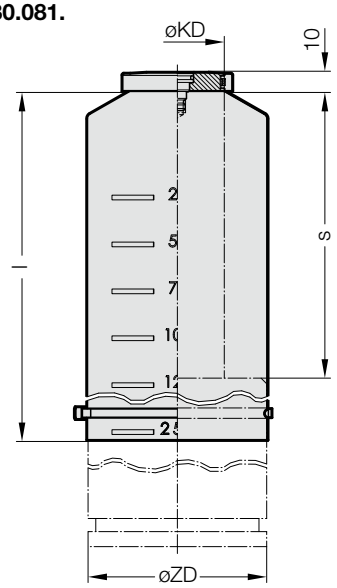
PISTON ROD PROTECTION, FIBRO-TEX®

Mounting example



2480.081.



Description:

The FIBRO-TEX® protects the piston rod of the gas spring against negative influences, such as:

- drawing in dirt
- damage to the surface of the piston rod
- adhesion of dirt particles
- drawing in oil and/or emulsion

The FIBRO-TEX® breathable material doesn't require aditional ventilation.

Due to the piston rod protection, FIBRO-TEX®, increases the lifetime of the gas spring under rough operating conditions.

Note:

Included with this part number is the piston rod protection FIBRO-TEX®, with the necessary washer with screw and o-ring, premountet with cable ties (to piston rod), cable tie (for gas spring housing) is added separately. The piston rod protetion has a length of 250 mm. The length of the piston rod protection is shortend individually to the stroke length of the gas spring.

Technical data:

Material:	Piston rod protection:	Polytetrafluo-rethylene (ePTFE)
	Washer:	Steel, burnished
	Cable tie (piston rod side):	Polyamide
	Cable tie (cylinder tube side):	Polyamide
Working temperature:		0°C - 80°C
Temperature resistance:		-35°C - 200°C
Chemical resistance:	Acids:	excellent
	Alkalines:	excellent
	Solvent:	excellent
Weather-resistance:	Sunlight (UV):	excellent
	Ozone:	excellent
	Water:	excellent
Oil resistance:	mineral:	excellent
	synthetic:	excellent

2480.081.00.006.2 (gas spring housing)

Minimum tensile strength:	220 up to 540 N
Cable tie width:	4,8 up to 7,6 mm
Stroke length:	25,4 mm

Gas spring connection systems
Introduction

Connecting gas springs in one more systems enables the user to monitor gas spring pressure from outside the tool, to adjust it if necessary, to fill it and to drain it. The connector system has many advantages including ease of maintenance, reliability and improvement in the quality of gas spring use in the tool.

FIBRO offers four different systems for hose connections for gas springs: Minimess system, Compression fitting system, JIC system (24° flare) and Micro connector system. The hoses, screwed connectors and other components are selected to meet the most stringent standards and undergo a series of tests including service life, static seel and robustness after repeated assembly and disassembly.

Minimess system 2480.00.23./.24.

+ Small external hose diameter Ø 5 mm
+ Small bending radius R_{min} = 20
+ High pressure resistance
+ Vibration-proof measurement couplings
+ Connector with valve
+ No tools needed for connecting hose to adapter, and disconnecting
± Swaged non-detachable hose fitting
– Not for use with a pressure reservoir

Technical data:

Hose:	polyamide 11, black, dimpled
Hose fitting:	free cutting steel, galvanised
Measurement couplings:	free cutting steel, galvanised
Adapter:	steel, gunmetal finish
Max. pressure:	630 bar
Temperature range:	0–100 °C

Recommended application:

Most used system for all gas springs with G$^1/_8$ gas connection.
Not suitable for use with a pressure reservoir because of the small internal diameter which reduces the flow.

Compression fitting system 2480.00.10.

+ Assemble on-site system
+ Reusable hose fitting
+ High pressure resistance
± Suitable for connecting to a pressure reservoir under certain conditions
– Larger bending radius R_{min} = 40
– Not suitable for gas springs with M6 connection thread
– Extra time required for preparing hose and fitting it

Technical data:

Hose:	polyurethane/polyamide, black, dimpled
Hose fittting:	steel, galvanised
Adapter:	steel, galvanised
Max. pressure:	380 bar
Temperatur range:	0–100 °C

Recommended application:

For all gas springs with G$^1/_8$ gas connection.
Mainly used for self-assembly in small numbers.

24°-cone-system 2480.00.25./.26.

+ Suitable for connecting to a pressure reservoir
+ Wide range of connection adapters
+ Vibration-proof (O-ring seal)
+ High pressure resistance
± Swaged non-detachable hose fitting
– Larger bending radius R_{min} = 40
–Not suitable for gas springs with M6 connection thread

Technical data:

Hose:	polyurethane/polyamide, black, dimpled
Hose fitting:	steel, galvanised
Adapter:	steel, galvanised
Max. pressure:	315 bar
Temperatur range:	0–100 °C

Recommended application:

For all gas springs with G$^1/_8$ gas connection.
Mainly used for connection to pressure reservoir.

Connector system, 24° conus micro 2480.00.27./.28.

+ small external hose diameter ø5 mm
+ hose: small bending radius R_{min} = 20 mm
+ pipe: Min. bending radius = 12 mm (3x da)
+ high pressure resistance
+ small connection adapter
+ vibration-safe due to O-ring seal
+ tightly pressed, non-detachable hose fitting
- not suitable for use with a pressure reservoir
- limited suitability for gas springs with thread connection G$^1/_8$

Technical data:

Hose:	Polyamide 11, black, dimpled
Hose adapter:	free cutting steel, galvanised
Adapter:	steel, galvanised
Max. perm. pressure:	475 bar
Temperature range:	0 to +80 °C
Pipe:	steel
Pipe external diameter (da):	ø4 mm
Pipe internal diameter (di):	ø2 mm
max. dynamic pressure:	430 bar
Temperature range:	0 to +100 °C

Note: Pipe system, 24° conus micro for higher temps on request.

Recommended application:

For all gas springs with M6 gas connection.
Not suitable for use with a pressure reservoir due to small internal diameter (reduced flow volume).

Instruction for hose assembly
Mounting arrangement
for gas springs in the Minimess system

Never exceed the maximum pressures and temperatures for the hoses.

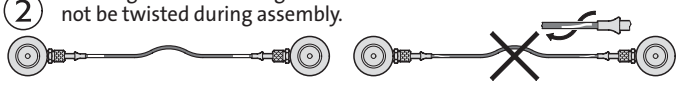
Ensure that all hoses and adaptors are perfectly clean prior to assembly.

To be suitable for use with compressed gas the hose sheath must be perforated. We recommend the use of the 24°-cone-hose system for pressure reservoir to ensure an unrestricted gas flow.

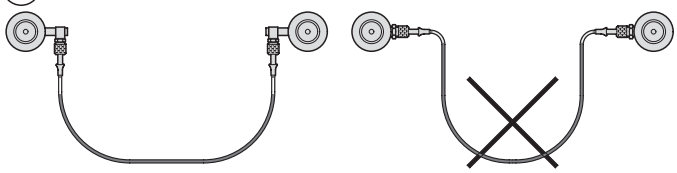
Follow the instructions below to ensure functionality and maximum service life for the hose connection:

1. Select a hose length to provide a certain amount of play.

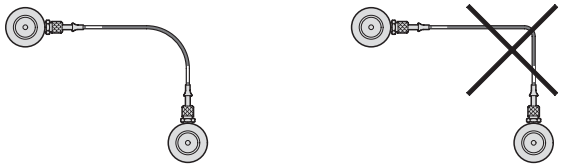
2. The longitudinal marking on the hose must not be twisted during assembly.



3. Use only hose fittings which prevent kinks forming in the hose.



4. Any bends in the hose must always have the recommended minimum radius, as detailed in the catalogue.



5. The hose must be connected correctly to avoid mechanical damage.

Refer to DIN 20066 for further details on installing hose connections.

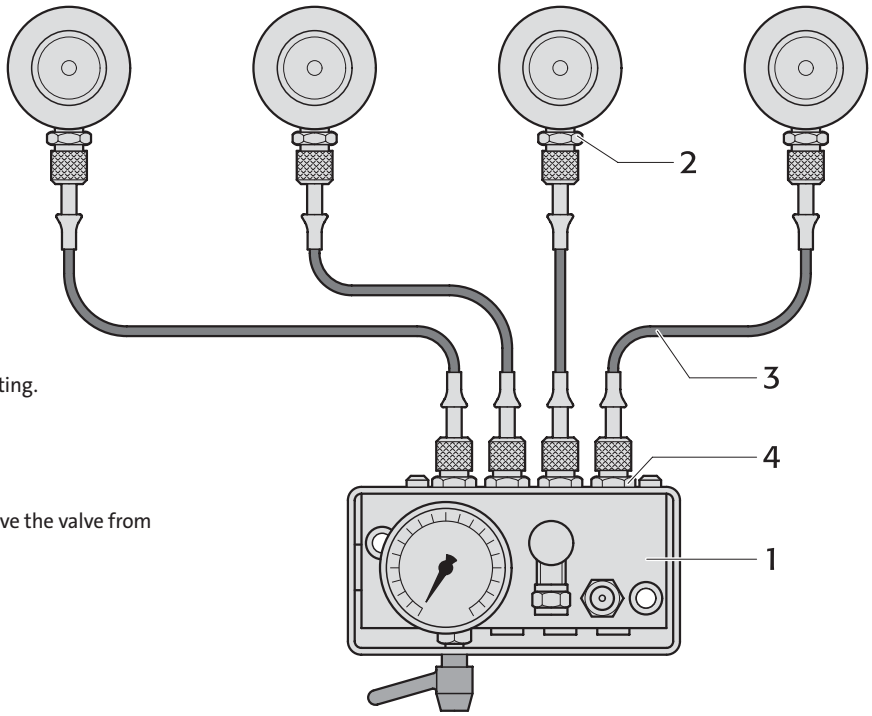
Warning:

Any modifications whatsoever to the product are prohibited.

For further information refer to the FIBRO Gas Spring Catalogue, visit www.fibro.com or contact your FIBRO agent.

2480. Example 1:

Direct connection for group



Function:

Each spring has a direct connection with the control fitting.
They are not interconnected and form a pressure zone

See control fitting 2480.00.30

Note:

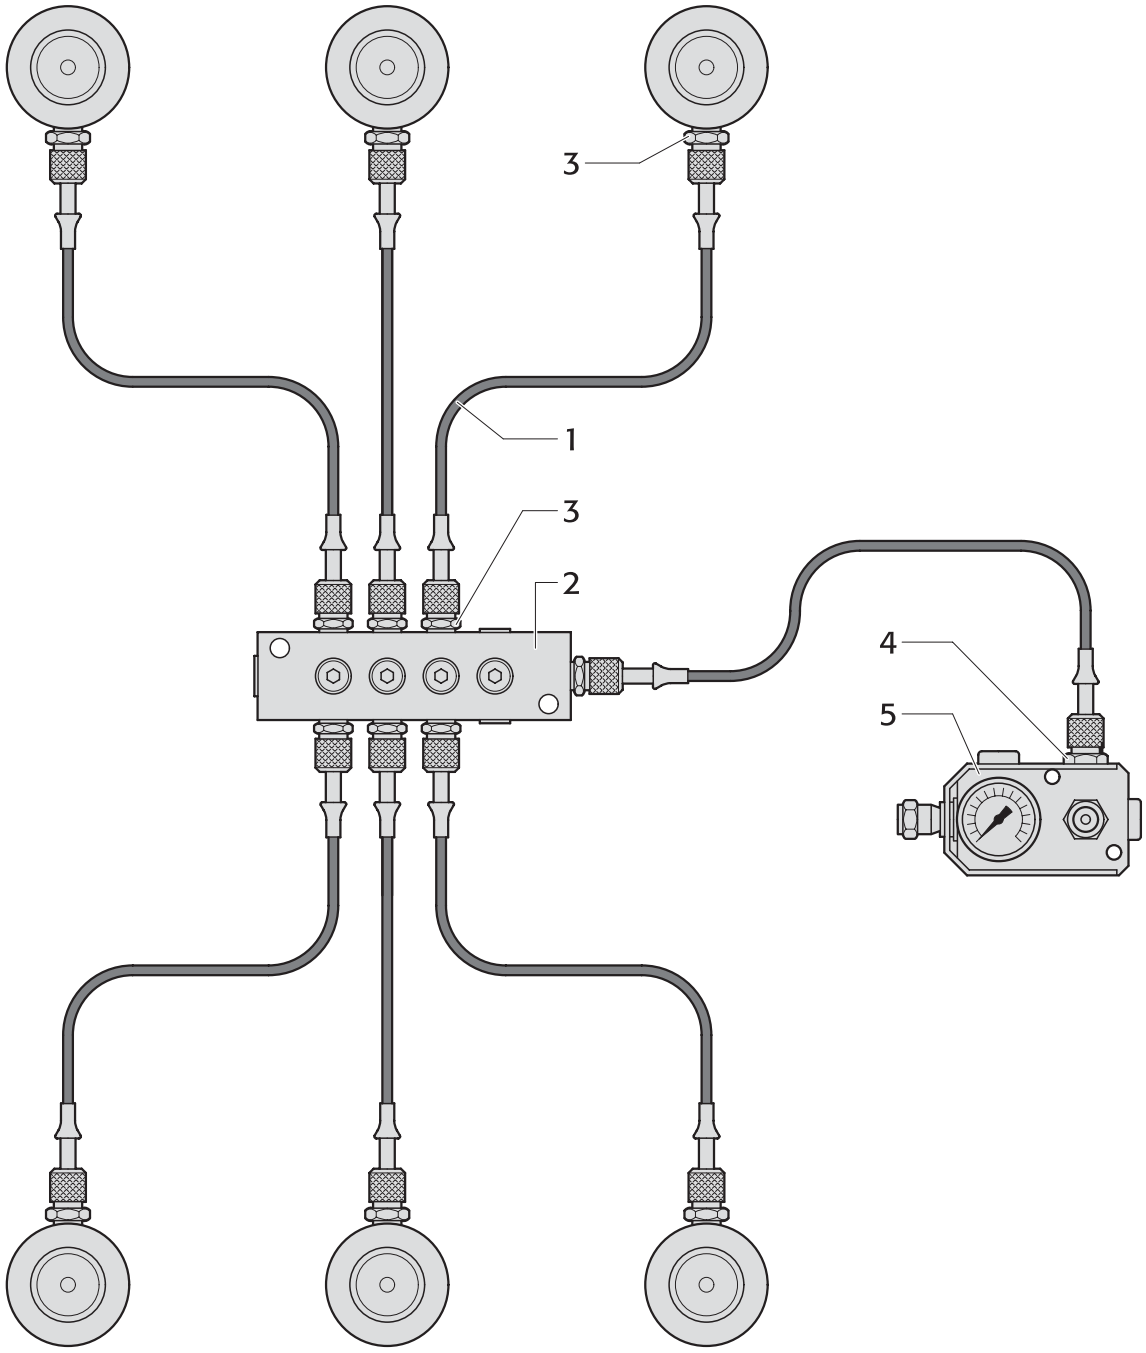
When installing gas springs in the system always remove the valve from the gas spring.

Item	Designation	Number	Order No.	Comment
1	Control fitting	1	2480.00.30.01	Optionally with diaphragm pressure switch 2480.00.30.02
2	Gauging coupling	4	2480.00.24.01	
3	Measuring hose	4	2480.00.23.□□.□□□	Type of connection and length as required
4	Gauging coupling	4	2480.00.24.02	

Mounting arrangement for gas springs in the Minimess system

2480. Example 2:

Group series connection



Function:

The springs are interconnected and there is just one test line to the control fitting.

Note:

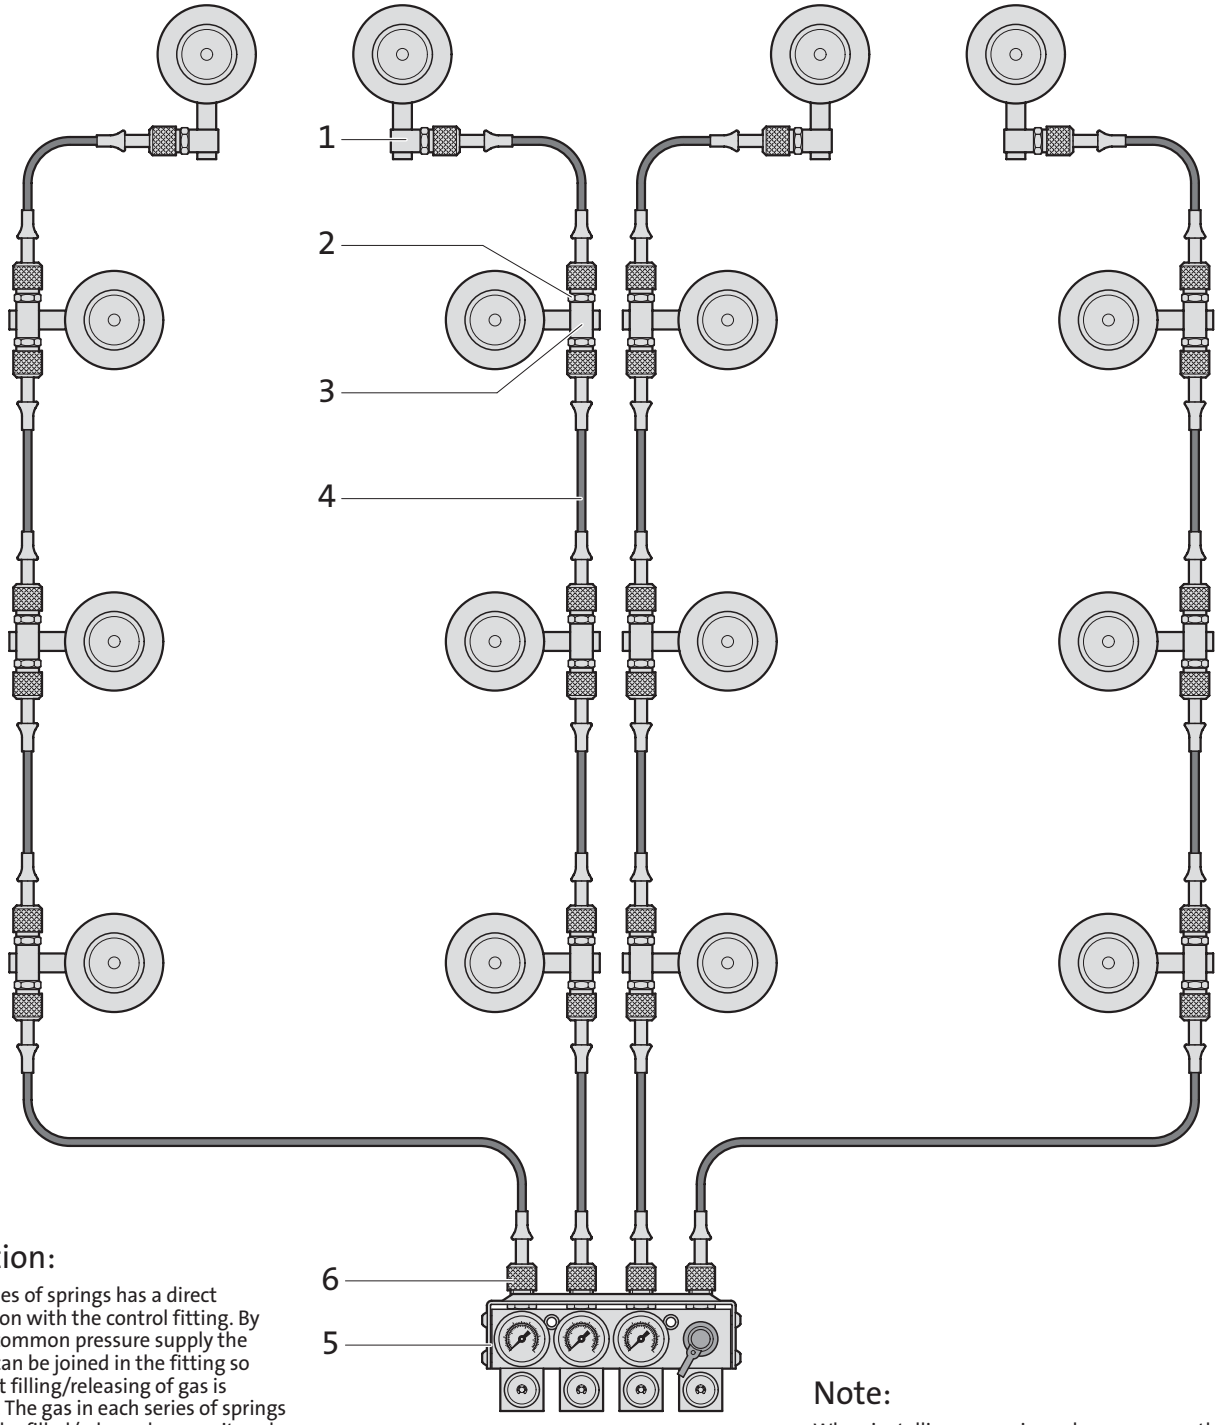
When installing gas springs in the system always remove the valve from the gas spring.

Position	Designation	Number	Order No.	Comment
1	Measuring hose	7	2480.00.23.□□.□□□	Type of connection and length as required
2	Distributor	1	2480.00.24.33	
3	Gauging coupling	13	2480.00.24.01	
4	Gauging coupling	1	2480.00.24.02	
5	Control fitting	1	2480.00.31.01	

Mounting arrangement for gas springs in the Minimess system

2480. Example 3:

Multiple connections with independent functioning



Function:

Each series of springs has a direct connection with the control fitting. By using a common pressure supply the springs can be joined in the fitting so that joint filling/releasing of gas is possible. The gas in each series of springs can also be filled/released or monitored individually .

See Multi control fitting 2480.00.39.05.04

Note:

When installing gas springs always remove the valve from the gas spring.

Item	Designation	Number	Order No.	Comment
1	Simple adaptor, short	4	2480.00.24.17	Choice of "long" or "very long" depending on the specific mounting arrangements.
2	Gauging coupling	28	2480.00.24.01	
3	Multi adapter	12	2480.00.24.11	Choice of "long" or "very long" depending on the specific mounting arrangements.

Micro control fitting
without pressure relief
with pressure relief

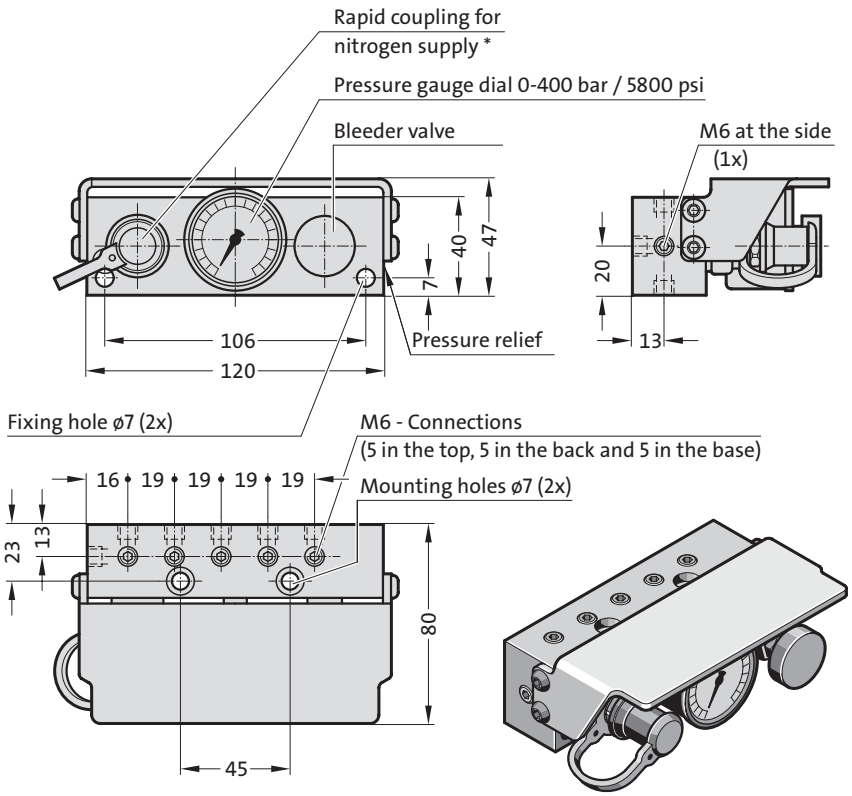
Description:

The micro control fitting 2480.00.34.11/13 is used to constantly monitor the charge pressure of one or more Gas Springs (3x5 connections M6, top, bottom, back and 1x at the side).

Note:

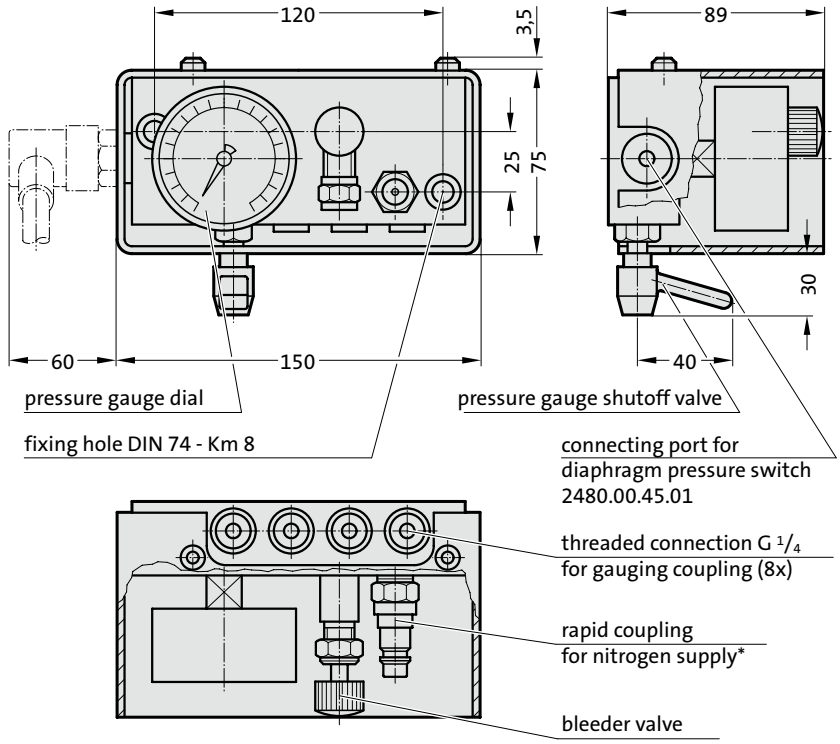
* 2 m long filling hose with rapid coupling, shut-off valve and gas bottle connector
  Order no: 2480.00.31.02 (to be ordered separately)

2480.00.34.11 without pressure relief
2480.00.34.13 with pressure relief



Control Fitting

2480.00.30.01 without pressure switch, without pressure relief
2480.00.30.02 with pressure switch, without pressure relief
2480.00.30.03 without pressure switch, with pressure relief
2480.00.30.04 with pressure switch, with pressure relief



Description:

The control fitting 2480.00.30.01/02/03/04 serves to control the charge pressure of up to eight connected gas springs.

Pressure checks during operation can be effected in two ways:

a) via optical monitoring of the pressure gauge dial.

b) via automatic monitoring with a diaphragm pressure switch. The switch will shut down the machine or trigger a signal.

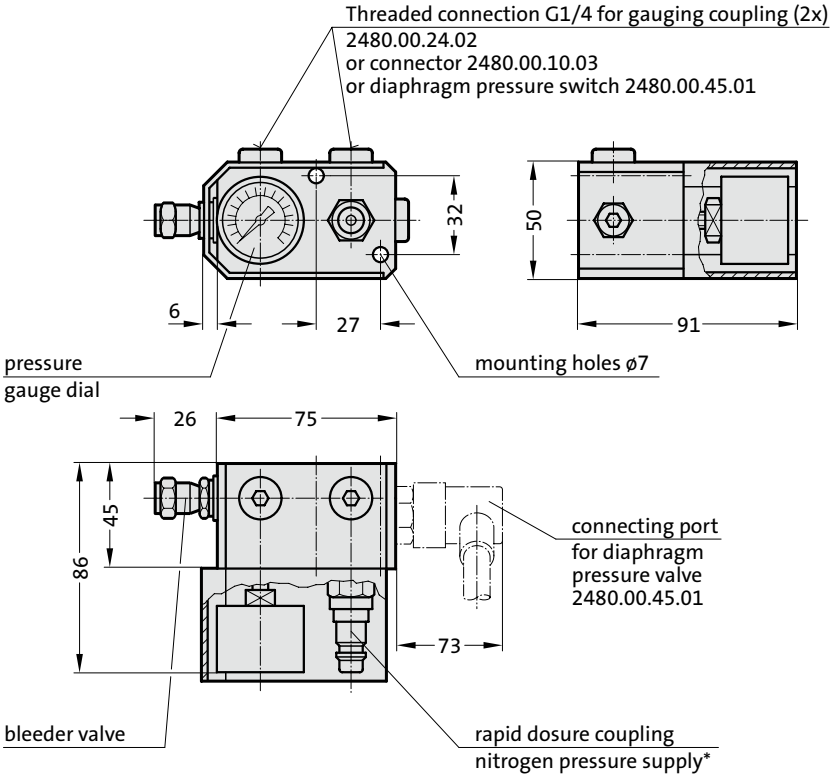
Note:

The shutoff valve may be open or closed during operation.

The closing of the pressure gauge shutoff valve ensures that no pressure peaks from the gas spring act on the pressure gauge.

* 2-m long filling hose with rapid coupling, shutoff valve and gas bottle connector, Order No. 2480.00.31.02 (to be ordered separately)

2480.00.31.01 without pressure switch
2480.00.31.06 with pressure switch
2480.00.31.07 without pressure switch and with pressure relief
2480.00.31.08 with pressure switch, with pressure relief

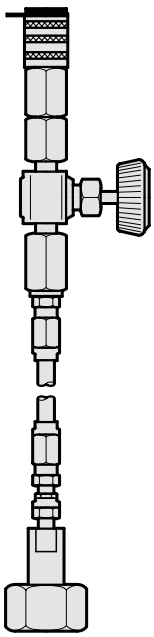


Description:

The control fitting 2480.00.31.01 performs the same function as the control armature 2480.00.30.01..

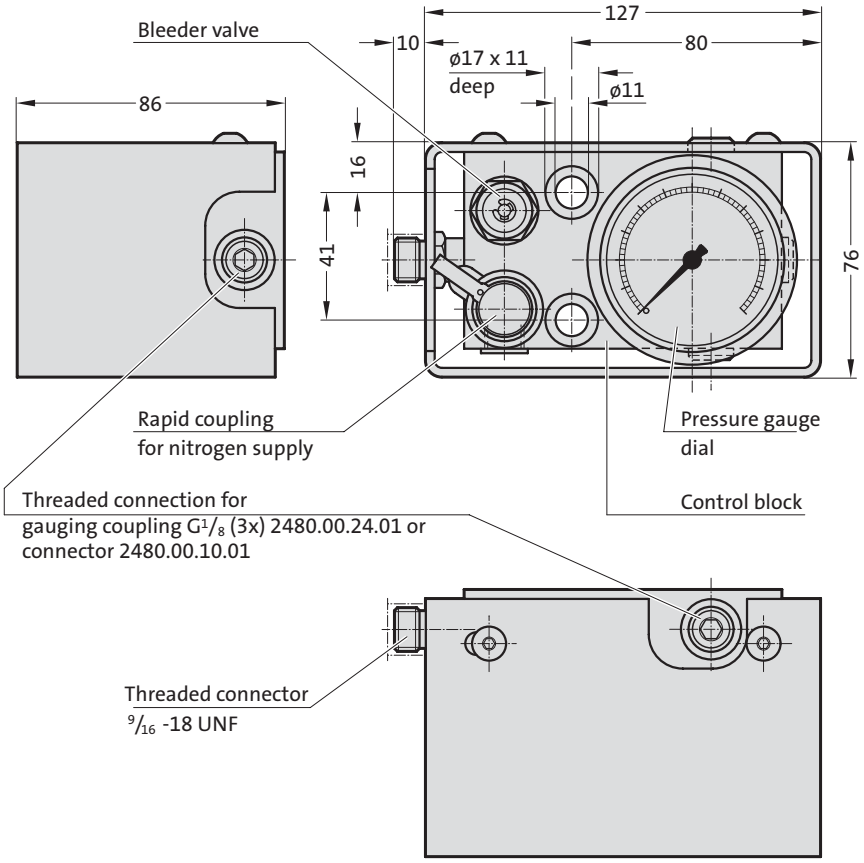
Note:

* 2-m long filling hose with rapid coupling, shutoff valve and gas bottle connector, Order No. 2480.00.31.02 (to be ordered separately)

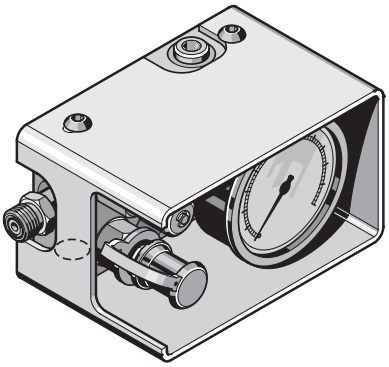


Control fitting

2480.00.30.13 without pressure switch, with pressure relief



2480.00.30.13

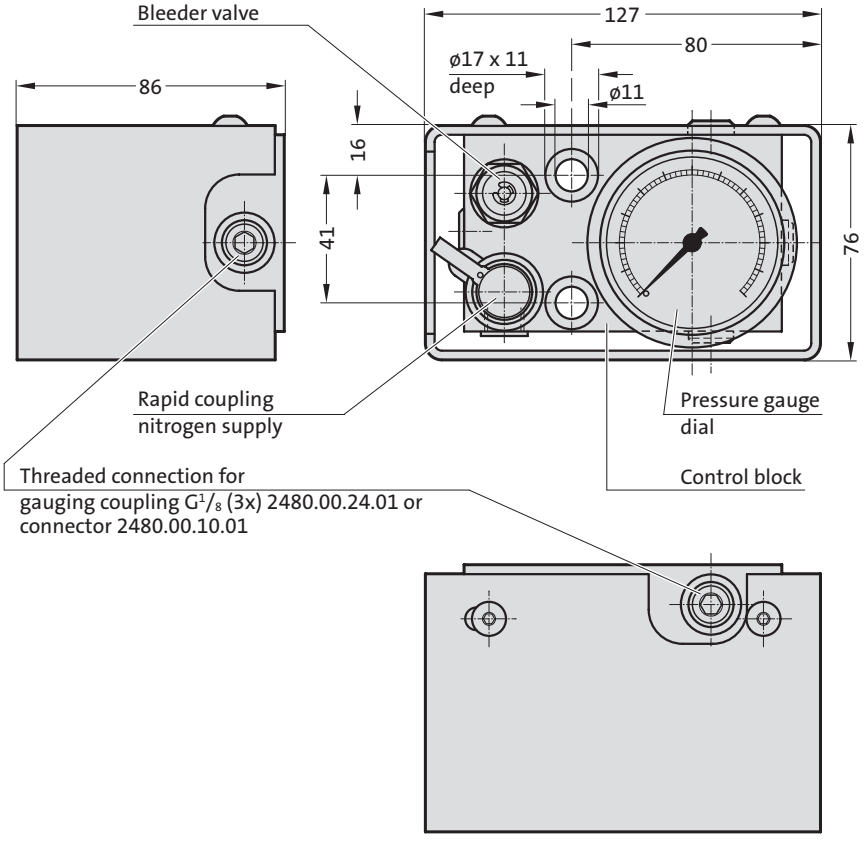


Description:

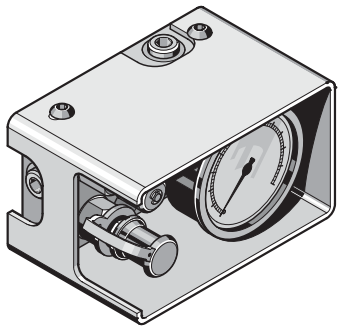
The control fitting 2480.00.30.13 is used to constantly monitor the filling pressure of one or more gas springs. The control fitting is equipped with rapid coupling for nitrogen supply and a bleeder valve. There are three $G^1/_8$ ports for simultaneous pressure checking at the control fitting.

Measuring range from
0 - 400 bar / 5800 psi.

2480.00.30.14 (600 bar) without pressure switch, without pressure relief



2480.00.30.14



Description:

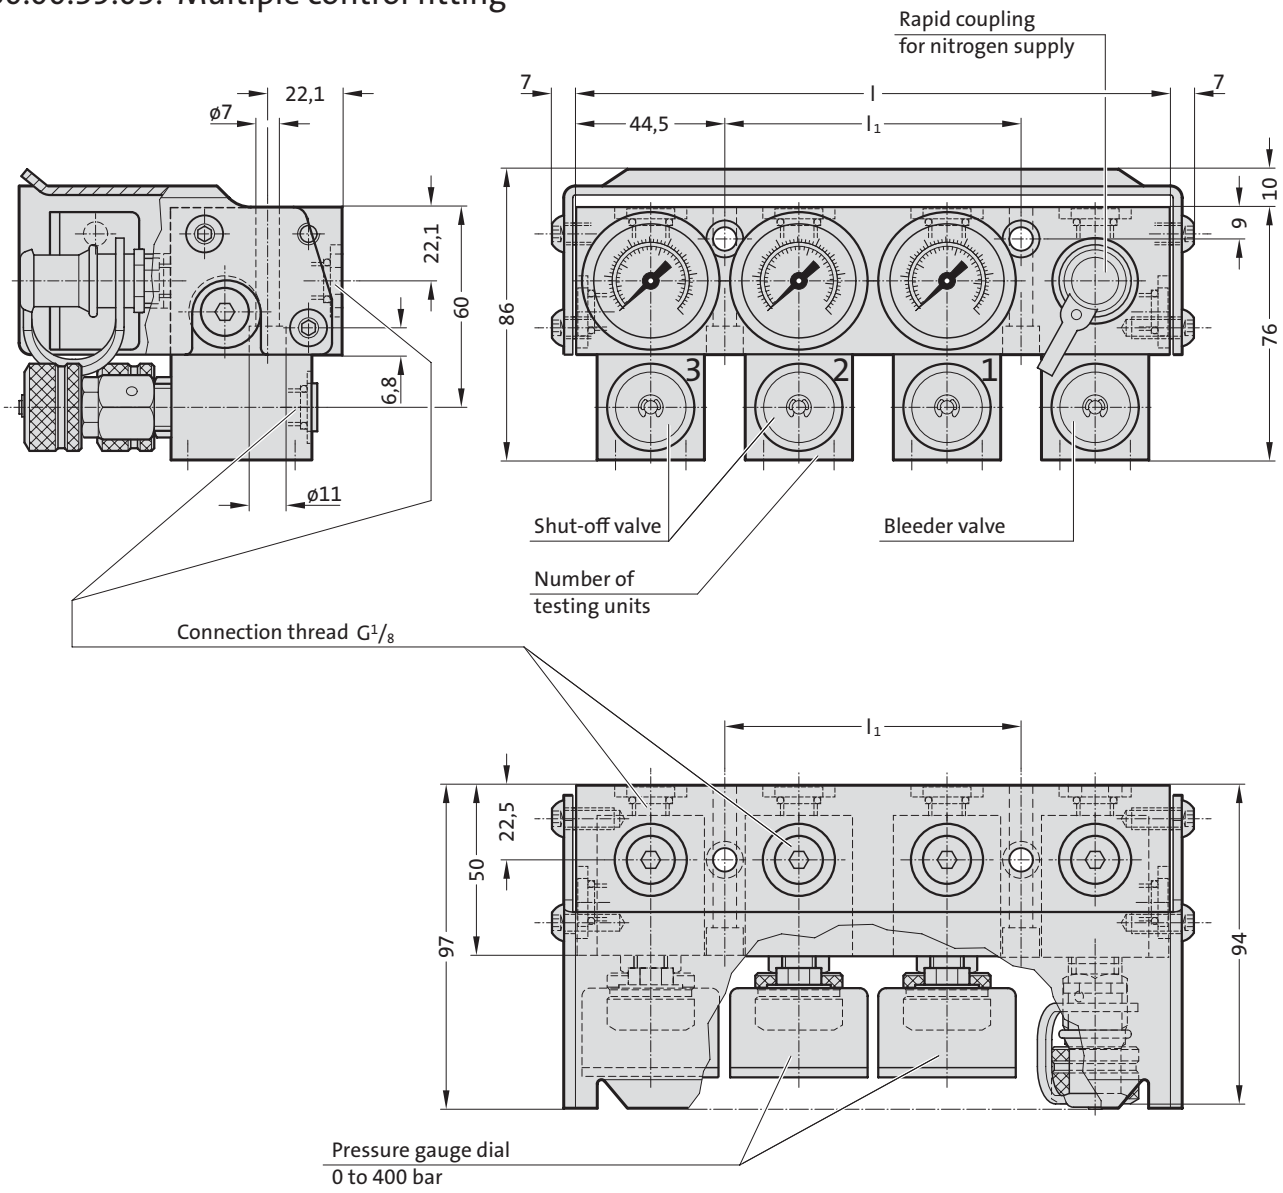
The control fitting 2480.00.30.14 is used for the constant monitoring of filling pressures > 150 bar of one or more gas springs.

The control fitting is equipped with rapid coupling for nitrogen supply and a bleeder valve. There are three $G^1/_8$ ports for simultaneous pressure checking at the control fitting.

Measuring range from
0-600 bar (8700 psi).

Multiple control fitting

2480.00.39.05. Multiple control fitting



Description:

The multiple control fitting is required if it is necessary to check or set the filling pressure of each spring or spring assembly individually.

The filling of the springs is done at a central position using the rapid coupling for nitrogen supply. Each testing unit is provided with three threaded connections for the optional hose connection.

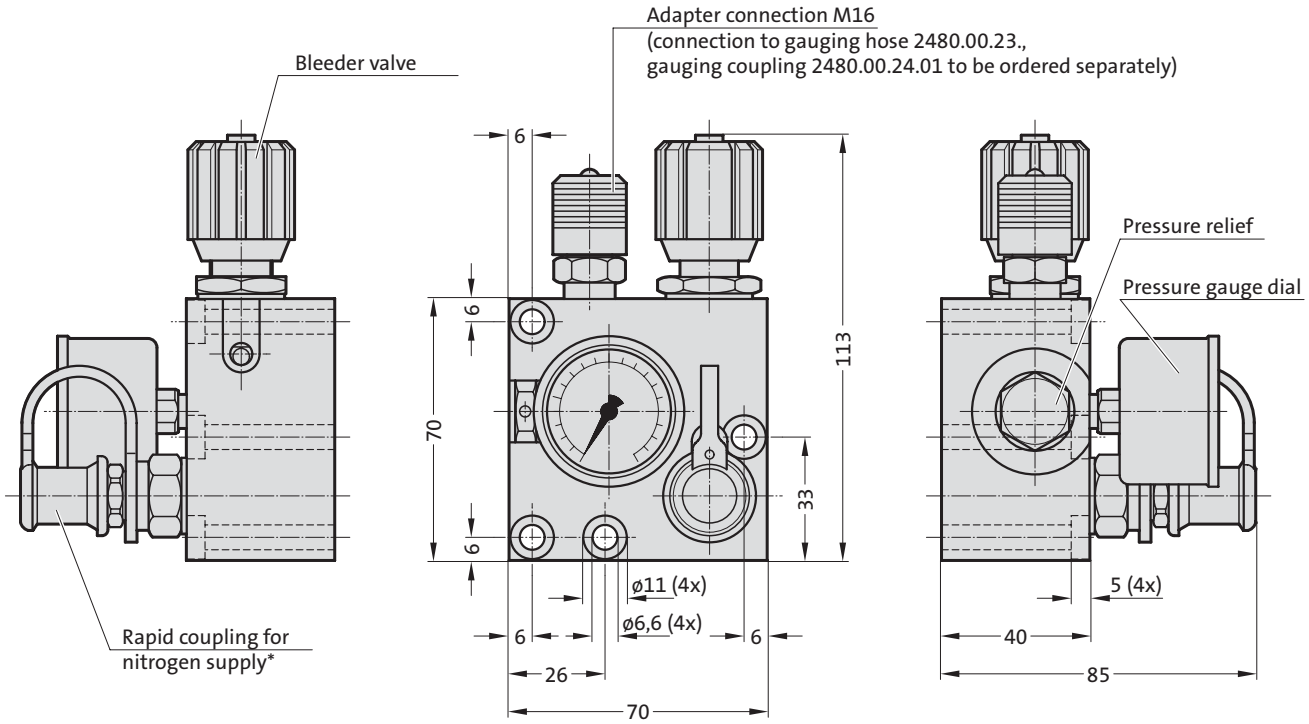
The cover protects against mechanical damages.

2480.00.39.05. Multiple control fitting

Order No	Quantity of testing units	l	l_1
2480.00.39.05.02	2	133.5	44.5
2480.00.39.05.03	3	178.0	89.0
2480.00.39.05.04	4	222.5	133.5
2480.00.39.05.05	5	267.0	178.0
2480.00.39.05.06	6	311.5	222.5
2480.00.39.05.08	8	400.5	311.5
2480.00.39.05.10	10	489.5	400.5

Control fitting with pressure relief

2480.00.31.11



Description:

The control fitting with pressure relief 2480.00.31.11 (Faure) is used for continuous monitoring of the filling pressure of one or more gas springs (one connection $G^1/_8$-M16).
During operation the pressure can be checked by visual monitoring of the pressure gauge.

Note:

To connect the measuring hose system 2480.00.23, remove M16 connection adapter and screw in the gauging coupling with valve 2480.00.24.01 (to be ordered separately).

When installing gas springs always remove the valve from the gas spring.

* 2 m long filling hose with rapid coupling, shut-off valve and gas bottle connector, Order no. 2480.00.31.02 (to be ordered separately)

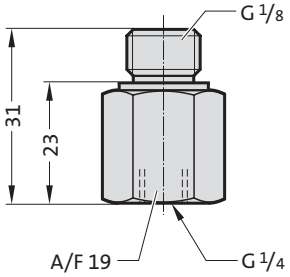
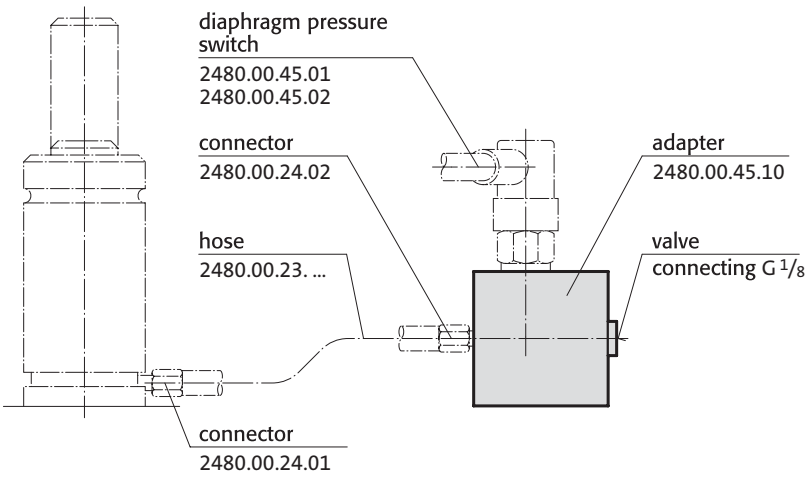
2480.00.45.00.01.18.14

Screw connection GE - G 1/8 - G 1/4 for Control fitting with connection thread G 1/8



Installation example:

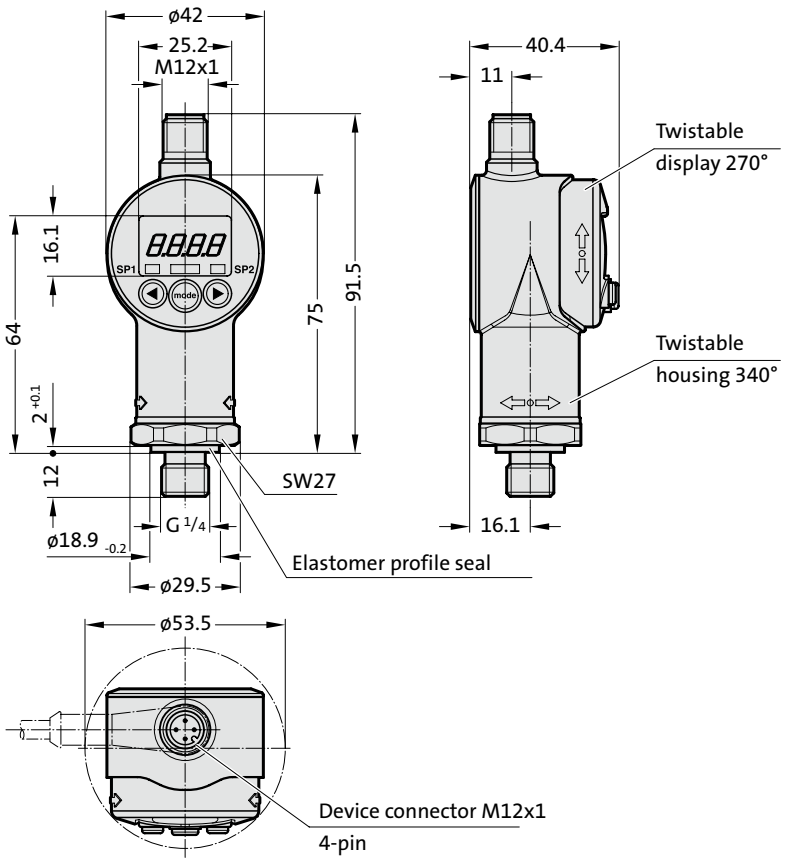


Description:

In conjunction with diaphragm pressure switch 2480.00.45.01 or .02, the adapter 2480.00.45.10 permits the monitoring of the charge pressure: if the pressure drops below a set value, the diaphragm pressure switch operates and emits a signal or stops the machine.

Diaphragm pressure switch, digital

2480.00.45.05 Diaphragm pressure switch, digital



Pin assignment:

M12x1, 4-pin

Pin	
1	+UB
2	Analogue
3	0 V
4	SP1

Note:

2191.00.12.04.030 connecting cable, straight
3 m long, to be ordered separately.

Description:

The diaphragm pressure switch, digital 2480.00.45.05 is a compact, electronic pressure switch with integrated digital display for relative pressure measurement in the high pressure range.
For this purpose, it has a stainless steel measuring cell with thin film strain gauge (DMS).
The device offers a switching output and a switchable analogue output signal (4 ... 20 mA resp. 0 ... 10 V).

Advantages:

- 1 PNP transistor output, loadable up to 1.2 A
- Precision ≤ ± 1 % FS
- Switchable analogue output (4 ... 20 mA / 0 ... 10 V)
- 4-digit digital display
- Optimal alignment by twisting in two axes
- Switching direction of the switch outputs adjustable (opening or closing function)
- Value display in bar, psi or MPa or freely scalable, for example, force
- Easy handling via button programming
- Switching points and reset hysteresis independently adjustable

Technical data:

Input characteristics:

Measuring range	400 bar
Overload range	800 bar
Burst pressure	2000 bar
Mechanical connection	$G^1/_4$
Tightening torque	20 Nm
Media-contacting parts	Connection piece: Stainless steel seal: FPM ($G^1/_4$ A DIN 3852)

Output parameters:

Precision according to DIN 16086,	≤ ± 0.5 % FS typical
Limit point adjustment (display, analogue output)	≤ ± 1 % FS max.
Reproducibility	≤ ± 0.25% FS max.
Temperature drift	≤ ± 0.025 % FS / °C max. Zero point ≤ ± 0.025 % FS / °C max. range

Analogue output:

Signal selectable:	4 ... 20 mA load max. 500 Ω 0 ... 10 V load min. 1 kΩ

Switching outputs:

Version	PNP transistor switching output
Switching current	max. 1.2 A
Operating temperature range	0° - 80 °C
CE mark	EN 61000-6-1 / 2 / 3 / 4
Protection class according to DIN 40050	IP67

Setting ranges for the switching outputs:

Switching function

Measuring range in bar	Switching point in bar	Hysteresis in bar	Increment* in bar
0 ... 400	6.0 ... 400	2.0 ... 396	1

Window function

Measuring range in bar	Lower Switching value in bar	Upper Switching value in bar	Increment* in bar
0 ... 400	6.0 ... 392	9.0 ... 396	1

* All areas specified in the table are adjustable in the grid of the step width.

Wireless Pressure Monitoring (WPM)

Wireless monitoring of gas springs

03.2018

Wireless Pressure Monitoring (WPM)

Wireless Pressure Monitoring (WPM)

Wireless monitoring of gas springs using Bluetooth LE 4.0

The core requirements on any pressing plant are: Automation and zero-defect production.
The FIBRO Wireless Pressure Monitoring (WPM) system monitors gas springs in all areas in which cable or hose-reliant systems reach their technical limitations, or are simply uneconomical.

The WPM system monitors temperature and pressure in gas springs.

It consists of a data holder and sensors, which transmit their data by radio to any desired Windows-based computer. Custom software analyses the data and initialises the necessary process control and pre-emptive maintenance steps accordingly.

FIBRO, with the WPM system for the fourth industrial revolution, provides a product and technology that supports concepts of intelligent processes and networked machines/tools.

Advantages:

- Around-the-clock monitoring and documentation
- Alert to defects avoiding production of faulty parts
- Pre-emptive wear detection and targeted troubleshooting
- Prevention of downtime and secondary failures
- Minimisation of leakage points
- Streamlined construction and assembly
- Optimised maintenance intervals and reduction of maintenance and repair costs

Monitoring system - Method of operation

The WPM system contains up to four components:

- Sensors in the pressing tool.
- Data holder manages the data from the tool sensors and transmits its parameters to the PC or gateway.
- PC with receiver:
  One device for setting up and initial parametrisation of the tool sensors as well as the data holder.
- Gateway that permanently installed on the press and communicates with both the tool sensors and the press control. (customer-specific)

Wireless Pressure Monitoring (WPM)
Software
Receiver

2480.00.91.51.01.0

PC-Software

Simple parameterisation of the system

Setting and display of the actual and setpoint values for pressure and temperature of the sensors in the tool via drag & drop.

Zero-defect production

Before and during the use of tools in the press, the WPM monitors the level of pressure of all gas springs.
The system reports defects pre-emptively before a faulty part can be manufactured. Definable warning and alarm value limits.

Gas spring location and status control via tool sensors

The system specifically locates the affected gas spring in the event of a fault.

Targeted maintenance

Temperature monitoring detects erosion before any drop of pressure occurs in the spring. System locates defective spring in case of malfunction. Downtime can be pre-emptively reduced or avoided.
The WPM system enables wear-specific maintenance intervals that significantly reduce maintenance and repair compared to fixed intervals.

Streamlined construction and assembly

Tool manufacturers need solely consider the position of sensors and springs. No need to install tube lines during assembly which means leakages are a thing of the past.

Process control documentation (Pressure/Time diagram)

Record data for pressure and temperature over the entire production period.

Description:

USB stick with Bluetooth LE 4.0 radio receiver.
Via the radio receiver, including driver, the WPM software can directly access the Bluetooth wireless network (sensors and data holders). The measurement data of the sensors are recorded via the radio interface and the configuration of the sensors and the data holder is performed.

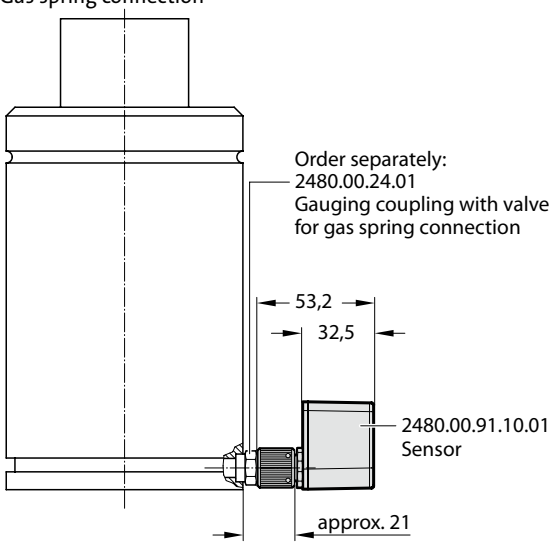
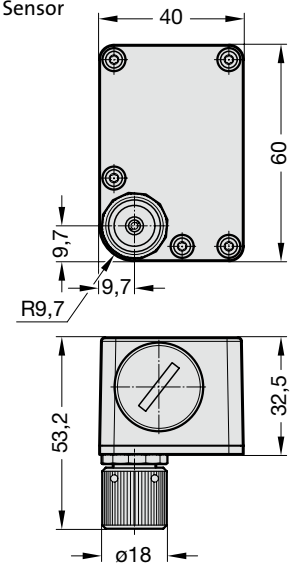
Wireless Pressure Monitoring (WPM)
Sensor
Filling adapter, Battery

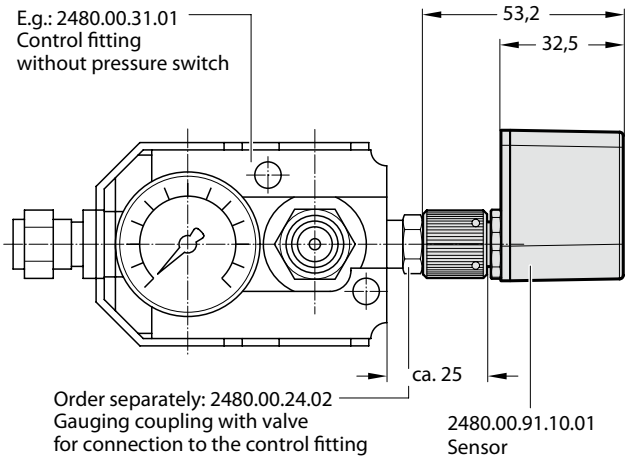
Mounting Example:
Sensor Gas spring connection



2480.00.91.10.01
Sensor



Mounting example:
Sensor - Control fitting connection



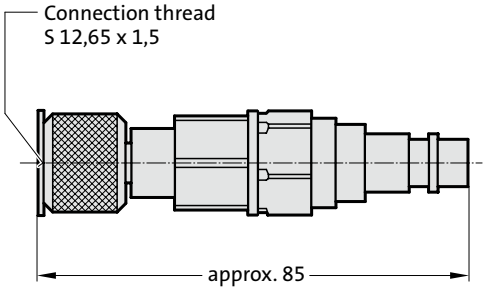
2480.00.91.10.01 Sensor Description

The sensor is battery operated and thus wireless.
In the operating mode, the sensor cyclically transmits data via Bluetooth LE 4.0 to the gateway or the USB receiver for transmission to the WPM software.
The mechanical construction is designed according to the requirements of the press (shock- and vibration-resistant).
The data transmission during the programming of the sensor is encrypted. In addition, a special protocol sequence with a security key must also be followed so that the sensor accepts the data.

The following data are queried:

- Limits for pressure and temperature
- Part number (tool number)
- Part ID
- Sensor ID
- Position in the tool
- Various cycle times
- Battery status
- Transmission power

2480.00.90.00.10
Filling adapter for minimess connection



Technical specifications:

Housing:	Plastic
Baseplate:	Aluminium
Miniature test port:	Steel galvanised M12,65 x 1,5 FEM
Pressure measuring range:	0 - 500 bar relative
Accuracy::	± 2 bar
Temperature measurement range:	0 °C to 85 °C
Battery:	Lithium Li-SoC12 2 / 3 A 3,6 V
Signal transmission:	Bluetooth LE 4.0
Impermeability:	IP65 sealed with adhesive and screwed
Operating temperature range:	0 °C to 80 °C

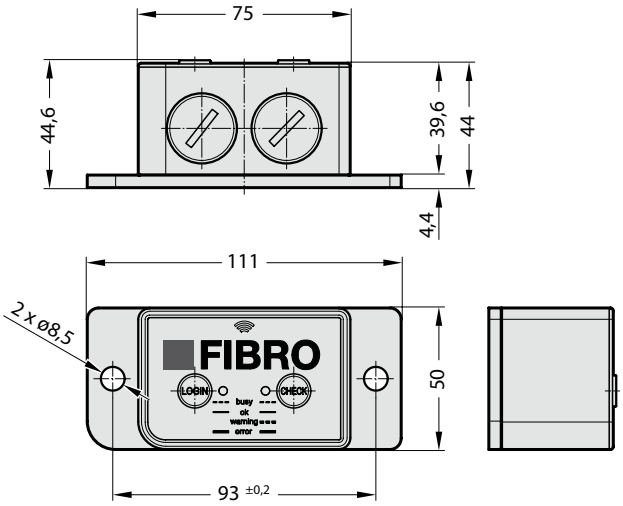
2480.00.91.10.00.1 Battery

Battery for reordering
(Battery is included in the sensor's scope of delivery.)

Battery capacity 3-4 years with "normal" tool use

Wireless Pressure Monitoring (WPM)
Data holder
Battery

2480.00.91.30



Description:

A data holder is installed on each tool. It stores all the tool data, as well as a list of all sensors that are found on the tool.
Up to 128 sensors can theoretically be used in one tool.
Via the CHECK button, the data holder can perform a quick tool scan (sensor condition such as pressure, battery and reception) with all the pressure sensors in the simplest manner.
The data holder receives the connection with the gateway or the read-out device (for example PC) and transmits its tool data. A tool change can be communicated to the gateway via the LOGIN button on the data holder.

Technical specifications:

Housing:	Plastic
Baseplate:	Aluminium
Battery compartment cover:	Aluminium
Signal transmission:	Bluetooth LE 4.0
Impermeability:	IP65 sealed with adhesive and screwed
Operating temperature:	0 °C to 55°C

Advantage:

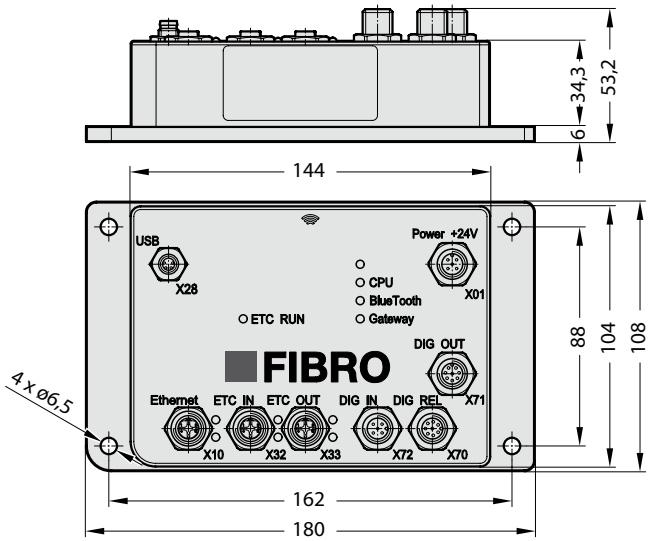
- Wireless pressure monitoring
- Tool data are always available on the tool
- Tool can also be used on press / machine without gateway
- Data evaluation via gateway, PC (WPM software) or also both possible in parallel
- Quick access to the sensor data by short Bluetooth LE 4.0 cycle times
- Fast tool check via button press on the data holder with optical evaluation

2480.00.91.10.00.1 Battery

Order number for reordering
(2 batteries are included in the scope of supply of the data holder.)
Battery capacity 3-4 years for “normal” tool use

Wireless Pressure Monitoring (WPM)
Gateway, Fieldbus

2480.00.91.40



Description:

The gateway, fieldbus 2480.00.91.40 is used to connect the sensors and the data holder to the press control and is not absolutely necessary for pressure monitoring. Without connection to the PLC, an evaluation must be carried out manually via the WPM software. By means of the pressure limit values stored in the data holder, the gateway can initiate a warning or switch-off via the interface for press control.
The mounting location on the press should be chosen in such a way that a good radio connection to the sensors in the tool is ensured.
Installation in the control cabinet is not possible due to the shielding of the metal box.

Technical specifications:

Housing:	Plastic
Baseplate:	Aluminium
Signal transmission:	Bluetooth LE 4.0
Impermeability:	IP65, screwed
Operating temperature:	0 °C to 55°C
Voltage supply:	+24V DC±20%

The device offers the following options:

- Communication with the sensors on the tool
- Communication with the data holder which provides the tool data
- USB interface for the communication with the WPM software
- Interface to machine control.
  The standard version has the common interfaces digital I/O, relay contacts, EtherCAT fieldbus and Ethernet fieldbus.
  Other interfaces upon request.

2480.00.91.40 Interfaces

X28	USB device. Direct connection (tunnelled) to the radio chip	M8	4-pin
X01	Power supply	M12	4-pin

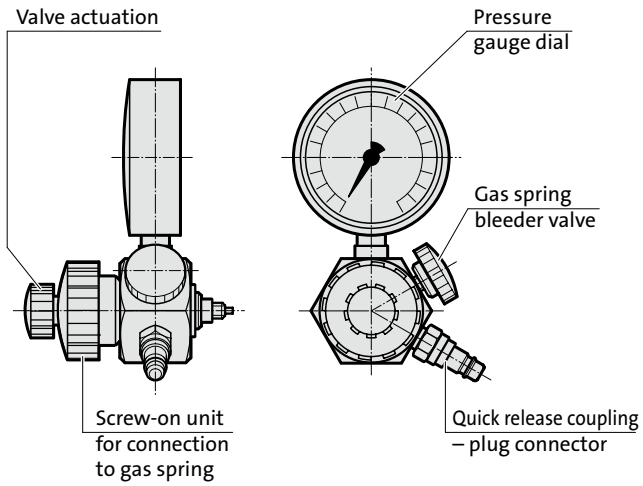
X70	Digital outputs, relay, 24V, 1A. 1 x on, 2 x around	M12	8-pin

FILLING AND CONTROL FITTING
FILLING HOSE
CYLINDER PRESSURE REGULATOR

Description:
The filling and control fitting 2480.00.32.21 is used to fill, vary the pressure setting (e.g. when testing tools) and measure the gas pressure. The coupling enables the filling hose 2480.00.31.02 to be connected directly to the gas cylinder valve or the pressure regulator. If the fitting is used solely for checking purposes, a simplified arrangement without the filling hose 2480.00.31.02 is also possible. The fitting is equipped with an additional adapter 2480.00.32.10/.11 for connecting to gas springs with G 1/8 valve connection as standard.

Note:
2 m long filling hose with quick release coupling, shut-off valve and gas bottle connector, order no. 2480.00.31.02 (order separately). Other filling hose lengths to order.

2480.00.32.21 Filling and control fitting



Connecting adapter for cylinder connector

Order No.	Country	For cylinder connector
2480.00.31.02.00.10	France	AFNOR C, W21,8x1/14
2480.00.31.02.00.11	China	G 5/8-ISO228
2480.00.31.02.00.12	Great Britain	G 5/8
2480.00.31.02.00.13	Korea	W24,32x1/4 Type 40f
2480.00.31.02.00.14	Russia	W24,32xG3/4 Type 40n
2480.00.31.02.00.15	USA	W24,32x1/4 Type 40c

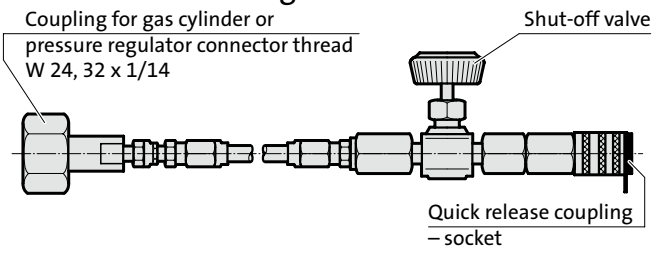
2480.00.31.02 Filling hose



Description:

The pressure regulator 2480.00.32.07. is designed for 200 bar connections and for 300 bar gas cylinders.
The filling and control fitting 2480.00.32.21 is connected to the cylinder pressure regulator for filling gas springs using filling hose 2480.00.31.02 and connector adaptor 2480.00.32.07.04.
Depending on the type of gas cylinder, the gas cylinder connector used can either be the 2480.00.32.07.02 for 200 bar cylinders or the 2480.00.32.07.03 for 300 bar cylinders.

Max. admission pressure 300 bar
Back pressure range 10-200 bar

Other advantages:
- Hasty opening of the gate valve on the filling and control fitting 2480.00.32.21 cannot result in overfilling.
- It is not necessary to have the pressure display of the filling and control fitting 2480.00.32.21 in view.

2480.00.32.07. Gas cylinder pressure regulator

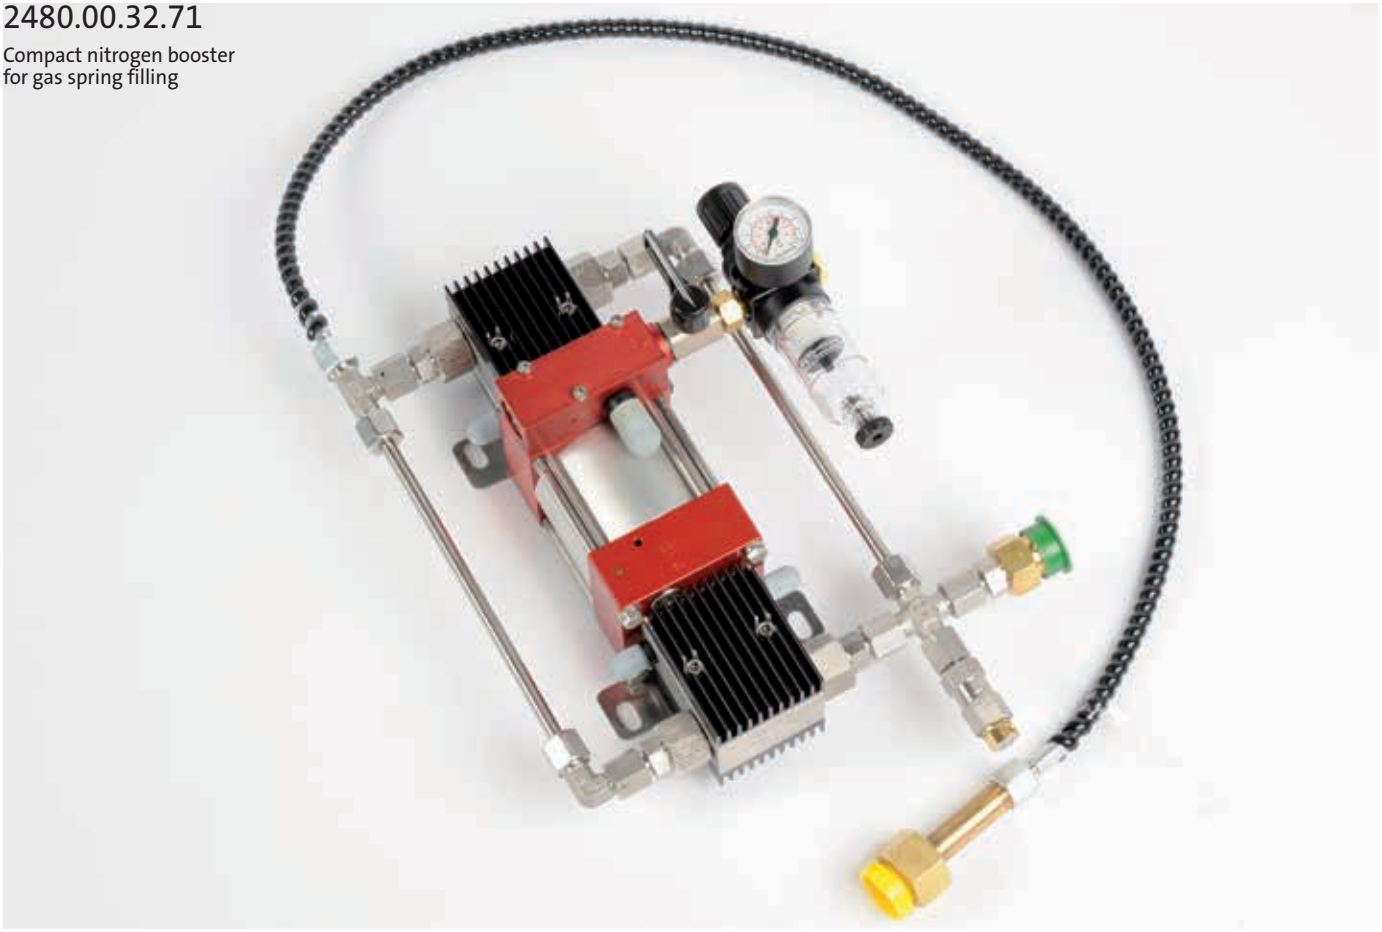
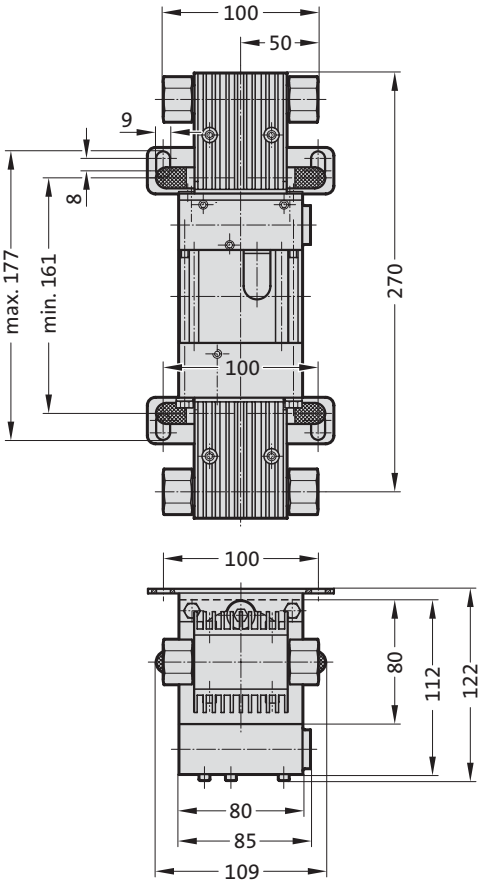
Compact nitrogen booster for gas spring filling

2480.00.32.71

Compact nitrogen booster
for gas spring filling



2480.00.32.71



Description:

The FIBRO compact nitrogen booster 2480.00.32.71 was developed to compress nitrogen gas. It increases the output pressure of the nitrogen cylinders considerably.

For example, when filling gas springs, the N_2 cylinders can be used up to a residual pressure of 30 bar.

Advantages:

- ► Increase in utilisation capacity
- ► Reduction in cylinder replacement time
- ► Minimisation of the number of cylinders
- ► Light weight (7.2 kg)
- ► Compact design
- ► Suitable for simple installation directly on all standard nitrogen cylinders (200 bar)

Function:

The FIBRO compact nitrogen booster works according to the principle of a pressure relay valve. Low pressure is applied to a large surface, which in turns applies high pressure to a small surface. Continuous delivery is achieved by means of an internally actuated 4/2-way valve.

Compressed air is used as the drive mechanism.

A holding plate is included to secure the compact nitrogen booster to the nitrogen cylinder. The compact nitrogen booster is simply hung over the nitrogen cylinder connection.

Compact Nitrogen Booster
Holding plate

Connection diagram

Compact Nitrogen Booster

2480.00.32.71.02 Holding plate

for re-order

① 2480.00.32.71 Compact Nitrogen Booster
② Gas cylinder connection W24, 32 x $^1/_{14}$ for 200 bar nitrogen cylinder
③ Nitrogen N_2 inlet
④ Compressed air inlet G$^1/_4$ max. 10 bar
⑤ Overpressure protection 400 bar
⑥ Nitrogen N_2 outlet
⑦ Connecting thread W24, 32 x $^1/_{14}$

Technical data:

Drive compressed air: 1 – 6 bar

Calculated operating pressure at 6 bar air drive pressure: 192 bar + remaining pressure in the nitrogen cylinder

Transmission ratio: 1:32

Displaced volume/double stroke: 11.6 cm³

Connections:

Compressed air: G$^1/_4$" thread

Nitrogen inlet: Hose DN4, 1 m long with N_2 cylinder connection 200 bar

Nitrogen outlet: N_2 cylinder connection 200 bar W24, 32 x $^1/_{14}$

Max. operating temperature: 60 °C

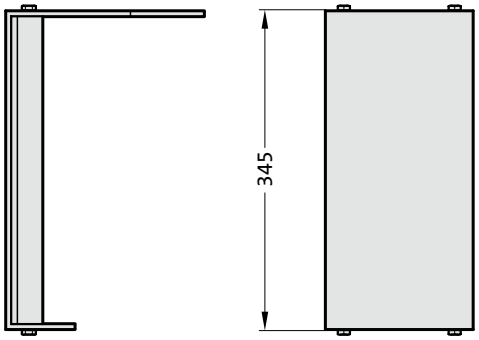
Weight: approx. 7.2 kg

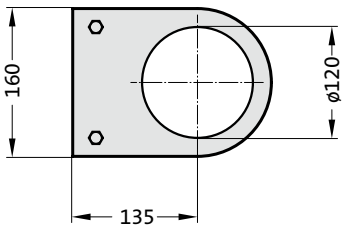
Inlet pressure: 30-300 bar

Average supply rate*: 280 NL/min

* The delivery rate is dependent on the air drive and inlet pressure.

2480.00.32.71.02





Dynamometer for gas s prings

2480.00.35.021
Analogue display

2480.00.35.032
Digital display

Description:

The dynamometer with mechanical measuring device can be used to test the spring force of gas springs up to 8000 daN.
The dynamometer with digital measuring device can be used to test the spring force of gas springs up to 10 000 daN.

The dynamometer 2480.00.35.021 with analogue display is supplied with three interchangeable pressure measuring nozzles different ranges of values:

up to	300 daN
from 300	to 1750 daN
from 1750	to 8000 daN

The dynamometer 2480.00.35.032 with digital display has a pressure measuring nozzle for forces ranging from 0 to 10 000 daN.

Maximum spring installation height	analogous	= 700 mm
	digital	= 760 mm

Dynamometer for gas springs

2480.00.35.04

Description:

The dynamometer with digital measuring device can be used to test the spring force of gas springs up to 2000 daN.

Max. spring installation height: 488 mm.

Max. spring diameter: 150 mm.

Toolkit for assembling gas springs

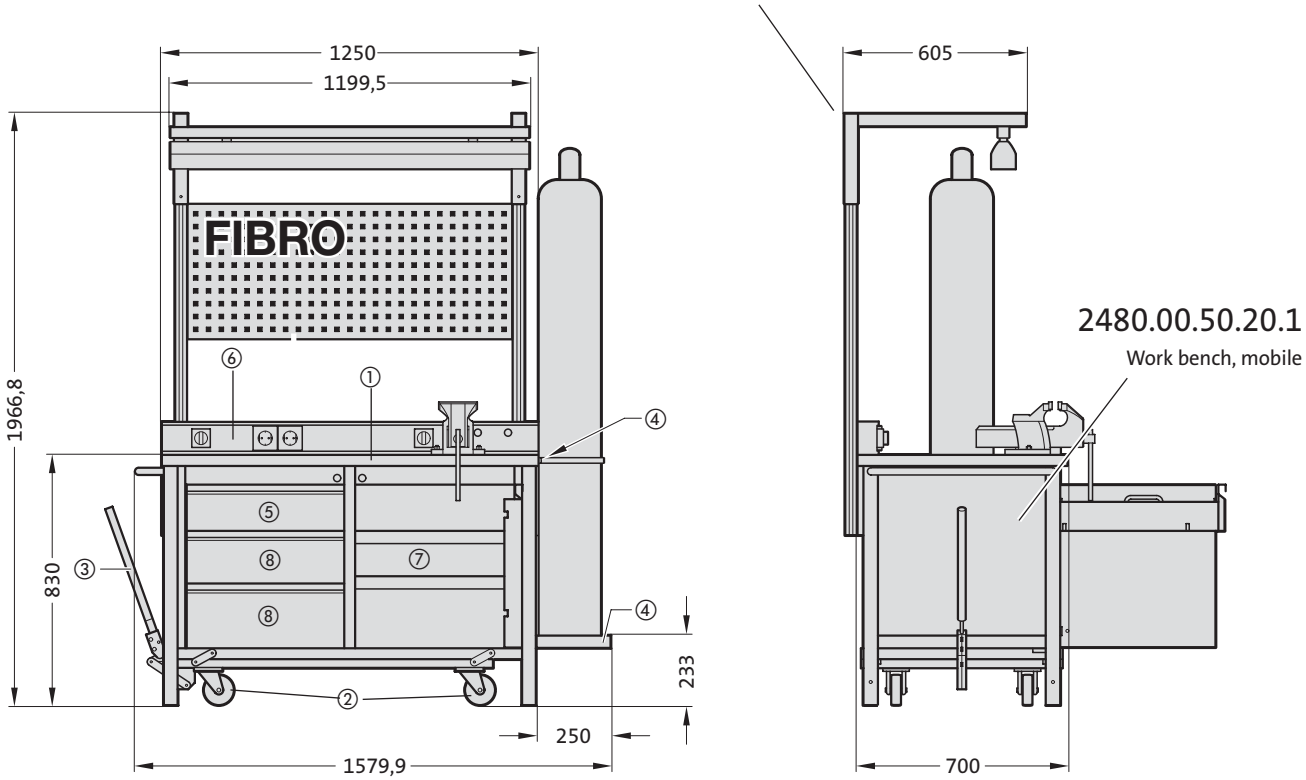
Service station, mobile, for gas springs

2480.00.50.20.

Service station, mobile, for gas springs

2480.00.50.20.2

Lighting unit, removable



Description:

The mobile service station for gas springs is an optimised solution for the filling/maintenance of gas springs directly on the press or tool.
The service station consists of a mobile work bench 2480.00.50.20.1 and a removable light unit 2480.00.50.20.2.

Advantages:

- "All in One" solution
- High mobility coupled with secure stability
- Clean handling of the gas spring components
- High user comfort

The mobile work bench 2480.00.50.20.1 is equipped with a 40 mm thick Trovidur work surface ①. The surface is hard-wearing and very easy to keep clean.

The height adjustable chassis with 4 castors ② allows for high mobility and provides secure stability for the service station. The chassis is easily moved up and down by way of an excenter lever ③ located on the left of the unit.

At the right of the unit, a loading receptacle with a locking clip ④ is located for 200 bar bottles.

A removable oil sump with a grate in the upper drawer ⑤ will ensure clean handling of the internal gas spring components.

The energy panel ⑥ offers great user comfort because of its integrated operating elements, like the compressed air connection, light switch and 3 x 230 V electric outlet.

The removable lighting unit 2480.00.50.20.2 is height adjustable to cater to the individual requirements of the user.

Technical data:

2480.00.50.20.1 Work bench, mobile:

Work surface, Tovidur (mm) 1250 x 700 x 40
Work bench chassis made from profile steel tubing (mm) 45 x 45 x 2
Parallel vices, jaw width = 100 mm

2480.00.50.20.2 Lighting unit, removable:

Elongated light (w = 1200 mm) with connection cable and plug
2 x 45 W, strip louvre with reflector
Electronic ballast
Protection type IP20

Connections

Input:

Central supply line on the right side of the cabinet (bottom rear) with electric supply line (protected energy supply plug)

$^1/_4$" internal thread for air infeed

Energy panel:

1 x $^1/_4$" internal thread for air connection

1 x On/OFF switch for air supply, rotary switch for Nitrogen Compact Booster

3 x 230 V socket (with hinged lid)

1 x ON/OFF switch for power supply, rotary switch

Accessory:

For optimised utilisation of the nitrogen bottle fill amount, a Compact Booster 2480.00.32.71 and a hose line DN4, 3 m 2480.00.32.71.05.03 can be integrated in specifically provided receiving braces in the cabinet ⑦.
The two free drawers ⑧ offer additional space for specialist tool sets 2480.00.50.11 for the repair of gas springs.

Pneumatic hose crimping machine
Electric hand held hose crimping machine (battery operated)
Hose shears

2480.00.54.10

Hose crimping machine,
for pneumatic hose sizes DN2 and DN5

Description:

The FIBRO pneumatic hose crimping machine, 2480.00.54.10 is suited for crimping the following hose connection systems:

2480.00.23.	Minimess-system
2480.00.25.	24°-conus-system
2480.00.27.01.	Connector system, 24° conus micro

The pneumatic-hydraulic hose crimping machine drive enables simple and fast hose harnessing.

After connecting compressed air (max. 7 bar) on the G$^1/_4$" threaded fitting, the hose crimping machine is operated manually with the air-hydraulic pump (0.1 - 0.5 l/min. at 7 bar air pressure).

Technical data:

Crimp force	750 kN/ 75 t
max. crimp range	52 mm
Opening	+10 mm
Opening without press clamps	52 mm
Press clamps (included in the delivery scope)	2480.00.54.10.02 (DN2)
	2480.00.54.10.05 (DN5)
Drive	pneumatic
Oil	1.4 liters
Length x width x height	230 x 180 x 160 mm
Weight	16 kg

Lubricant-free
Sheetmetal glide pads on the press tool:
- improved performance due to reduced friction
- no press tool wear and no contamination from lubricants, 20% reduction in friction loss

2480.00.54.03

Hose shears

2480.00.54.20

Electric hand held hose crimping machine (battery operated)
for hose size DN2

Description:

The FIBRO electric hand held hose crimping machine, 2480.00.54.20 is suited for crimping the following hose connection systems:

2480.00.23.	Minimess-system
2480.00.27.01.	Connector system, 24° conus micro

The electric-hydraulic (battery operated) hand held hose crimping machine enables simple and fast hose crimping. The correct crimp force is ensured by a crimp force sensor and once correct force is reached an audible signal can be heard. The electric hand held hose crimping machine, is ideal for very quick crimping.

Technical data:

Crimp force	15 kN
Quantity of pressings	ca. 150 at 1.5 Ah
Head for crimping jaws	ca. 350° revolving
Drive	battery operated
Voltage	18 V
Power	1.5 Ah
Battery charging time	ca. 15 min
Length x width x height	377 x 75 x 116 mm
Weight	2.3 kg

Included: Electric hand held hose crimping machine, crimping jaws, battery, charger and case.

The following crimping fixtures and hoses can be ordered:

for the Minimess-system

2480.00.23.00.	Hose 630 bar dimpled, DN2 *
2480.00.23.01.V	Threaded connection, straight, packed, DN2 - 1215
2480.00.23.02.V	Threaded connection, 90°, packed, DN2 - 1215

for the connector system, 24° conus micro

2480.00.23.00.	Hose 630 bar dimpled, DN2 *
2480.00.27.01.V	Threaded connection, straight, packed

for the 24°-conus-system **

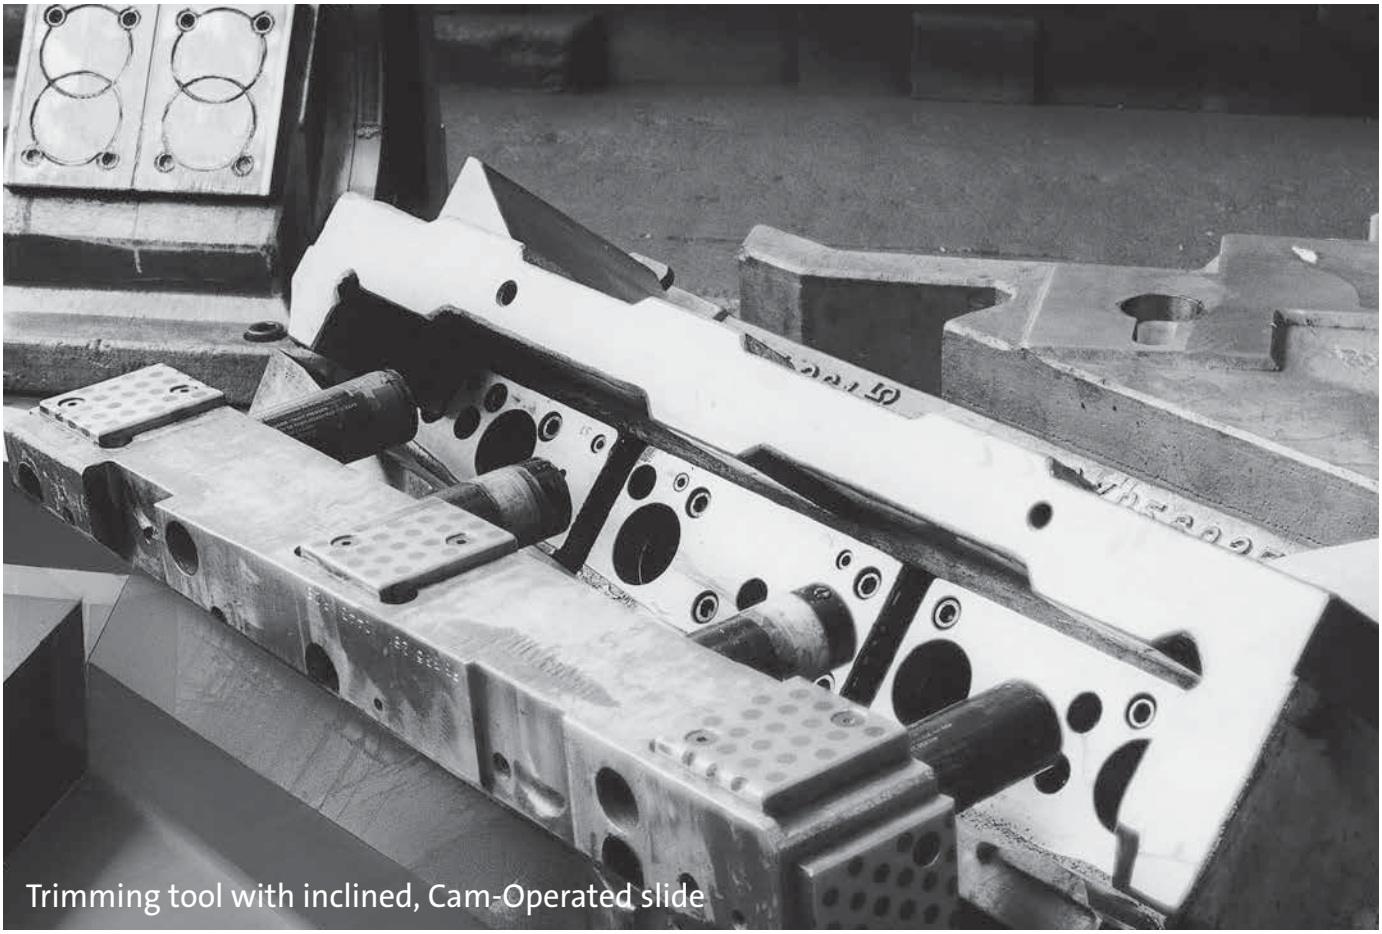
2489.00.02.	High-pressure hose, dimpled, DN5 *
2480.00.25.01	Hose fitting, straight
2480.00.25.02	Hose fitting, 90°
2480.00.25.04	Hose fitting, 45°

* Hoses to be ordered in 1 meter lengths,
e.g. ordering example for hose DN2, 10 meter lenght
= 2480.00.23.00.0010

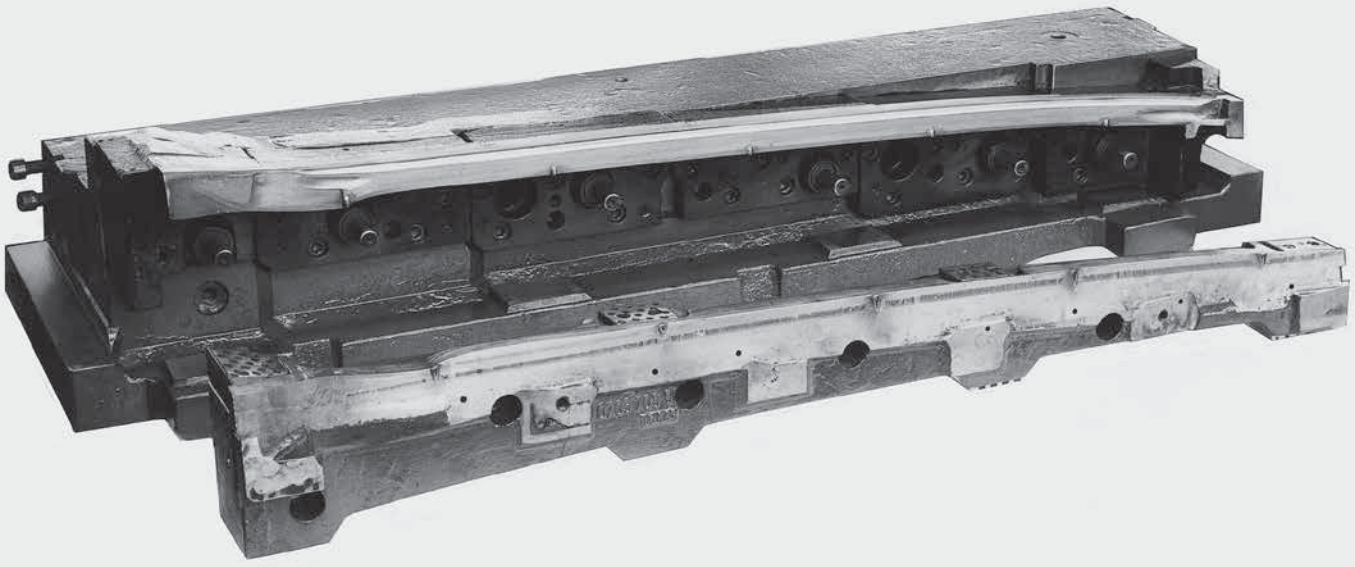
** not for 2480.00.54.20 electric hand held hose crimping machine

Application examples

Application examples



Trimming tool with inclined, Cam-Operated slide

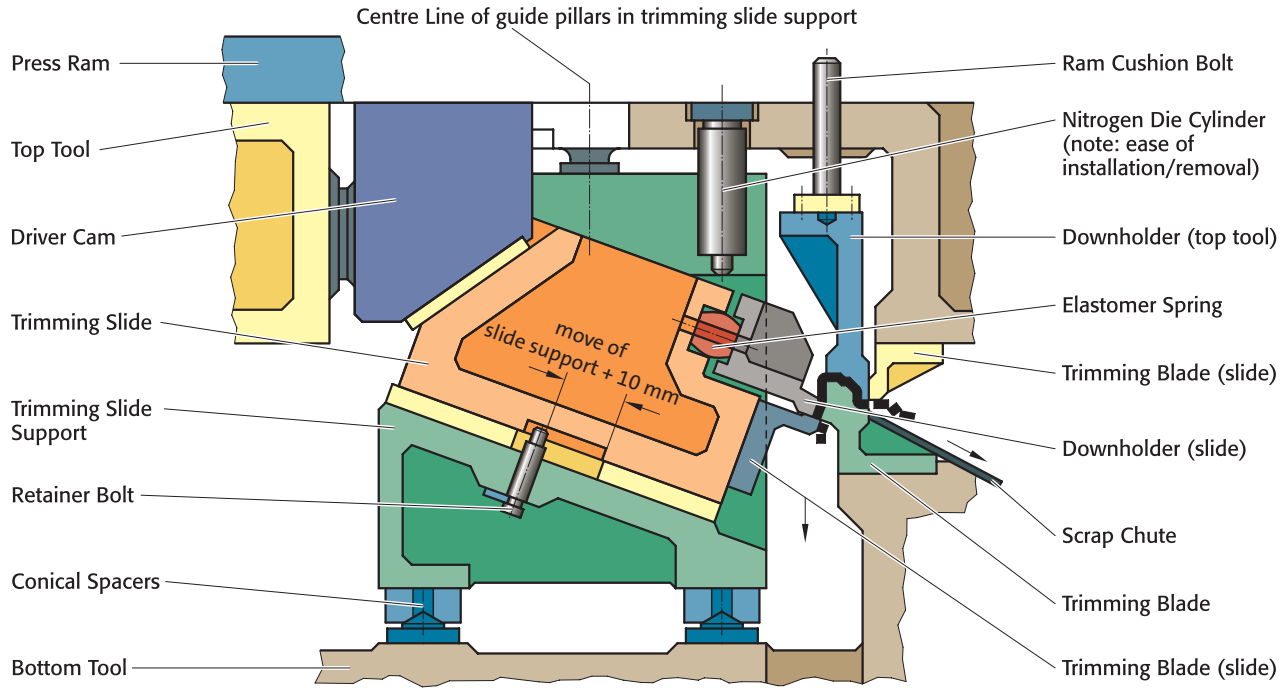


Drawing slide of large forming tool

Application examples

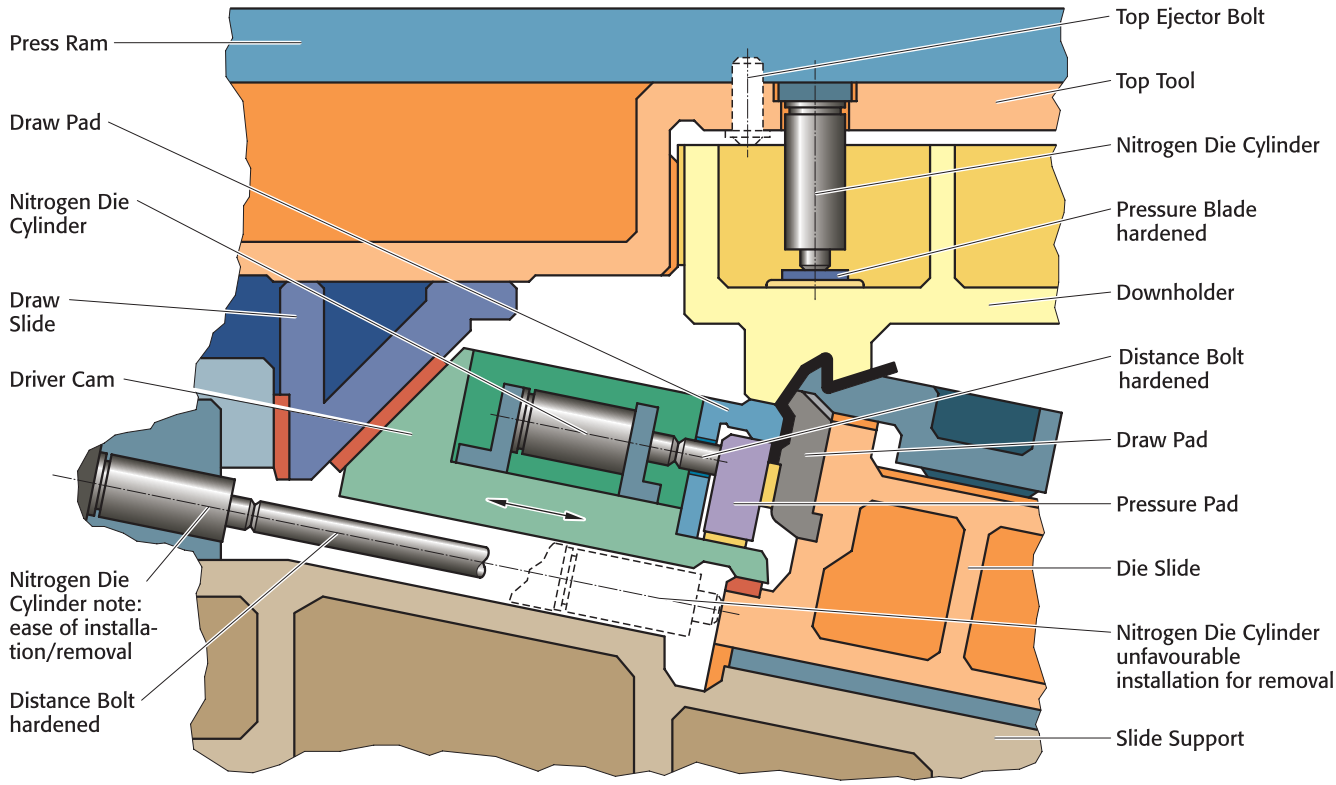
Trimming tool with inclined cam slide

Nitrogen die cylinders in the top ensure the positive centering of the trimming slide on the centering cones in the bottom tool section.



Drawing tool

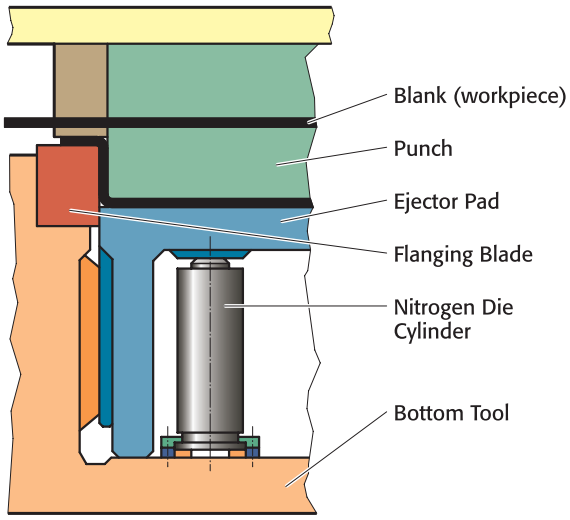
The nitrogen die cylinder for the drawing slide is easily placed into position; the safety lid secures it.
Very high forces are required in this tool for the draw pad in the slide.
The nitrogen die cylinders in the top tool serve as boosters for the insufficient ram cushion.



Application examples

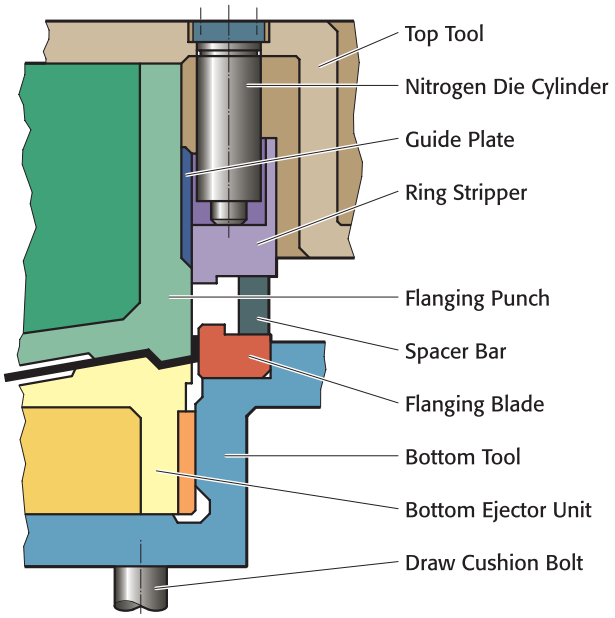
Flanging tool with nitrogen die cylinders

Where bottom ejection facilities are lacking, FIBRO Nitrogen die cylinders will provide reliable actuation of piece part ejectors.



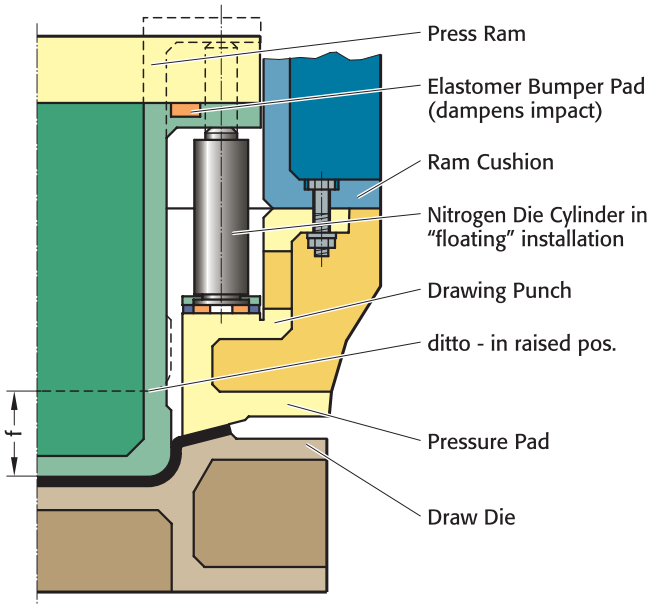
Flanging tool with ring stripper

The ring stripper is actuated by nitrogen die cylinders.



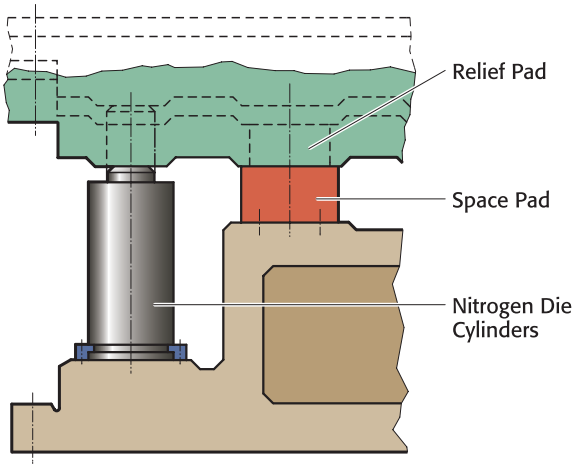
Double-Acting drawing tool

In order to obtain shorter setting times, only the downholder is boltet to the ram cushion. The drawing punch is raised through f + 20 mm by nitrogen die cylinders.



Blanking and piercing tool

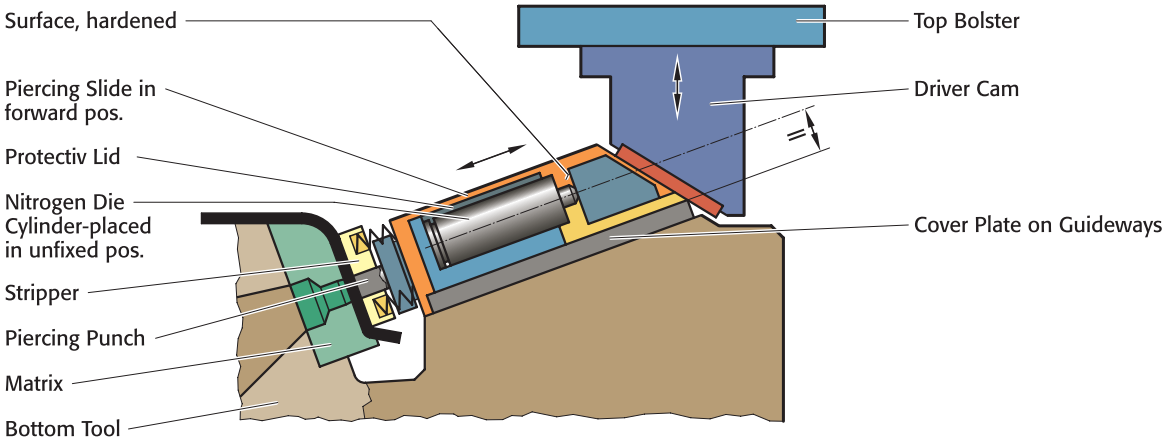
The application of nitrogen die cylinders instead of the usual elastomer bumpers results in a significant reduction of setting time. Moreover, injuries caused by "fly-out" elastomer bumpers are eliminated.



Application examples

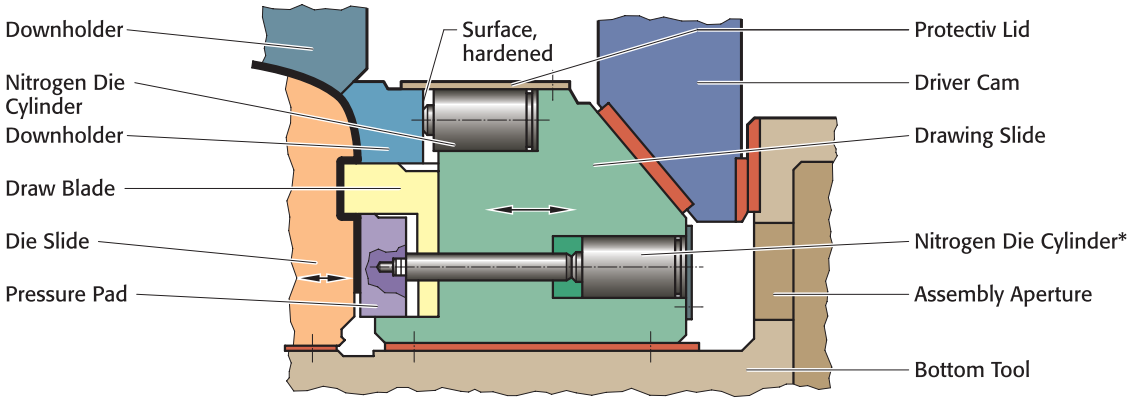
Retraction of piercing slide by nitrogen die cylinder

Die cylinder is mounted to bottom tool. It retracts the slide after completention of the piercing operation.
We recommend a “soft”-start on the cam shape in order to reduce impact and accerleration on the die cylinder.



Drawing slide

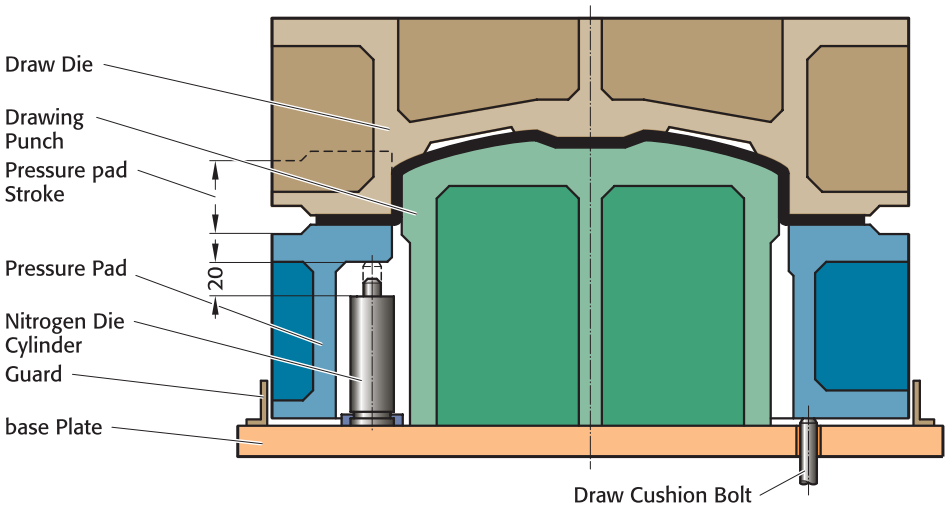
In order to prevent wrinkling, this tool requires high forces on the downholder and pressure pad.
An elegant solution was achieved with nitrogen die cylinders. Ease of cylinder installation was ensured.



*Must be secured with special flange.

Drawing tool

The pressure pad is actuated by nitrogen die cylinders during the final 20 mm of the draw.

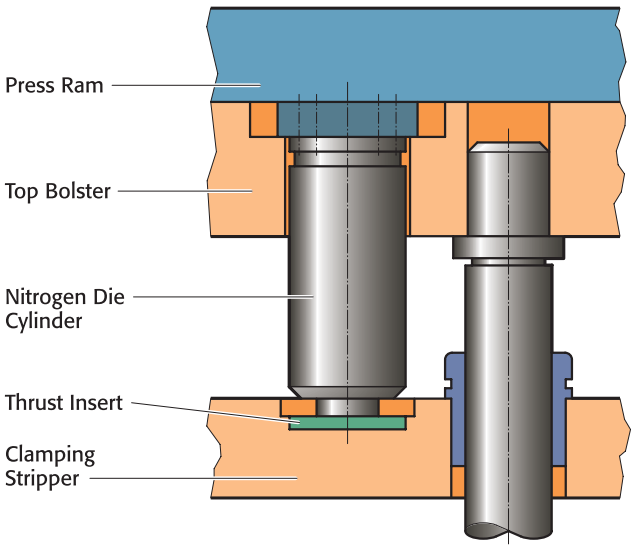


Application examples

Detail of progression compound tool

The clamping stripper is actuated by two nitrogen die cylinders 2480.12.01500.025.

The units provide an initial cylinder force of 15 kN each and a stroke capacity of 25 mm – of which 20 mm are utilized.

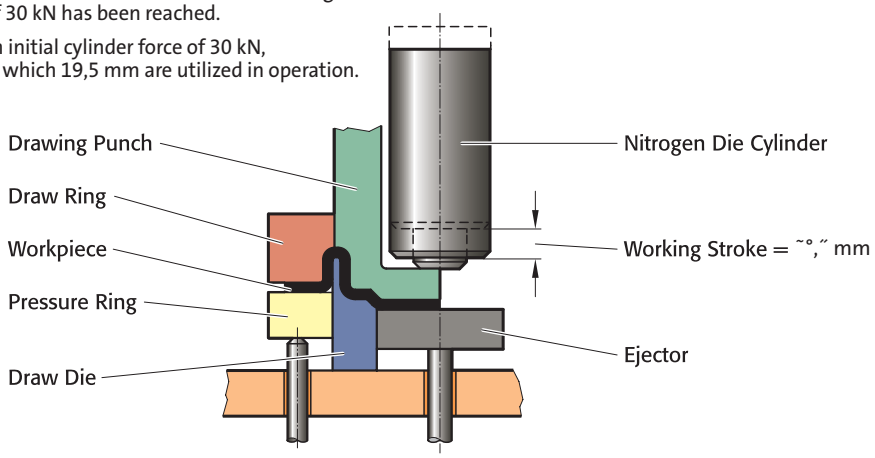


Drawing tool

Intended for use in a 100 ton hydraulic press, with one nitrogen die cylinder 2480.12.03000.025 mounted in the drawing punch.

In this application the die cylinder serves to accomplish the initial pre-draw of the internal shape, as well as for finish the draw over the draw ring – after the bottoming pressure of 30 kN has been reached.

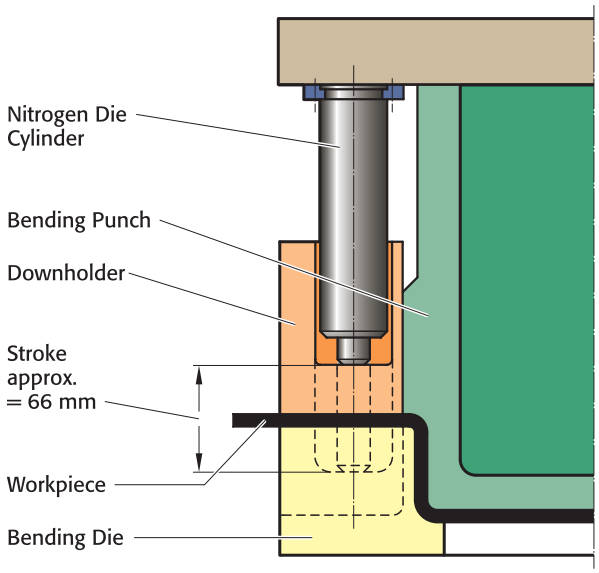
The nitrogen die cylinder has an initial cylinder force of 30 kN, a stroke capacity of 25 mm – of which 19,5 mm are utilized in operation. Stroking speed is 4 SPM.



Bending tool for round bars

This tool employs two nitrogen die cylinders 2480.13.00750.080 for actuating the downholder. Press stroke is 92 mm. The stroke of the downholder is approx. 66 mm.

Because of manual loading, press strokes vary from 36 to 40 SPM. Part ejection is automatic. The nitrogen die cylinders provide an initial force of 7,5 kN each, and a stroke capacity of 80 mm.

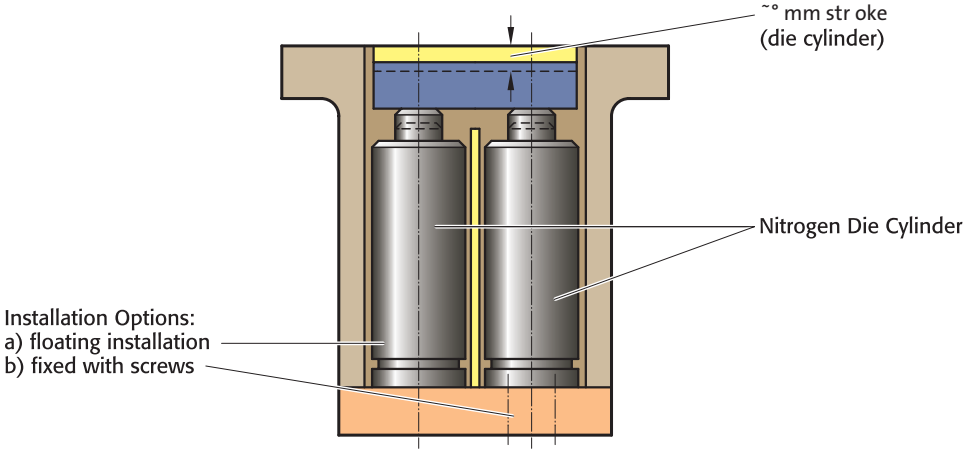


Application examples

Bottom ejector in progression compound tool

Two nitrogen die cylinders 2480.13.00750.025 are used, providing an initial force of 7,5 kN each, and a stroke capacity of 25 mm.

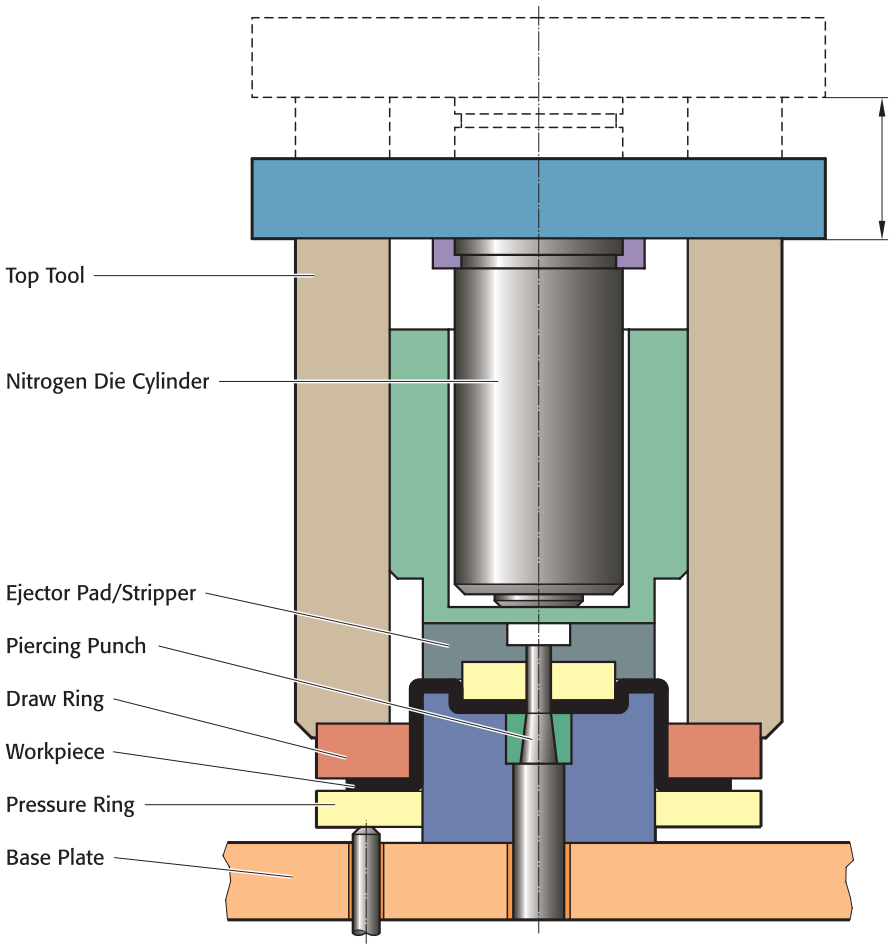
The actual working stroke is 10 mm. The tool is run at a speed of 150 SPM, with a ram stroke of 48 mm.



Drawing- and piercing tool

This tool is used in a 100 ton hydraulic press.

The nitrogen die cylinder is a 2480.13.03000.080, with a charge pressure of 130 bar – giving an initial cylinder force of 26 kN.
Stroke capacity is 80 mm. The actual working stroke is 76 mm.
The press is run at 14 SPM.



Application example of gas springs

Gas springs facilitate tools storage and tools preparation for production

Gas springs find increasing use in large press tools - in the sole role of aiding theier storage and production preparation.

The springs are bolted to either the upper or lower bolsters. They are activated only when the tool is being taken out of the press.

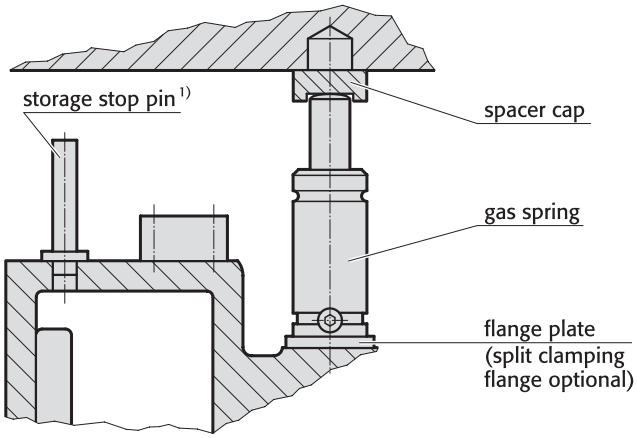
Application examples 1 and 2 show that special spacer caps are inserted prior to the tool being let down onto the gas springs – this being done whilst still in the press. During removal from the press and subsequent storage, the springs will keep the top tool elevated.

Storage stop pins are provided next to the springs; when tools are stacked one on top of the other, the increasing mass will force the springs to recade – and the tops will eventually abut against the storage pins. Once the stack is removed, the springs take over adain and push the top tool up.

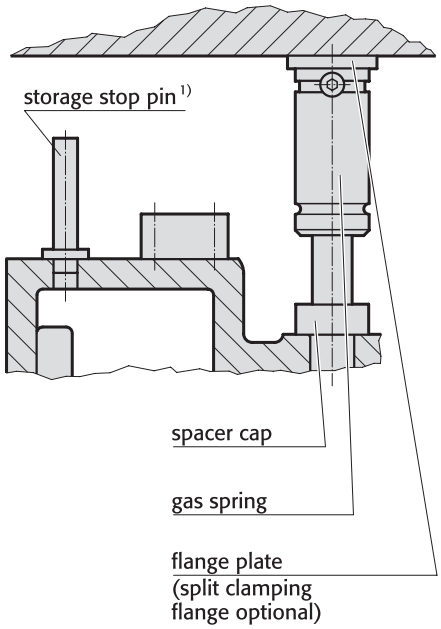
Upon being prepared for production, the springs facilitate access to the tool. Once back in the press, the spacer caps are removed and the storage springs remain inactive during the production run.

It is recommended to affix warning signs to the tools in a prominent position: the presence of gas springs in the tool often cannot be seen from the outside.

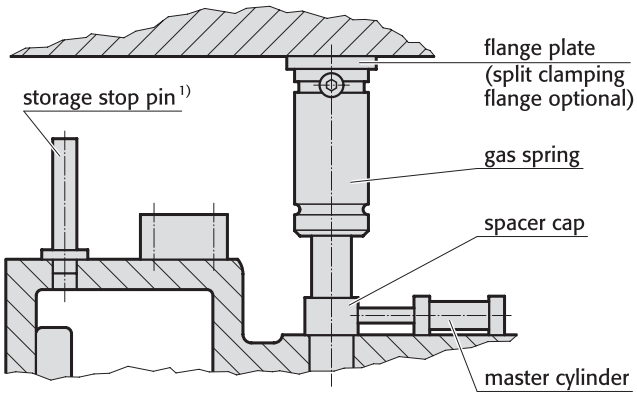
Example 1: Gas Spring fixed to bottom bolster



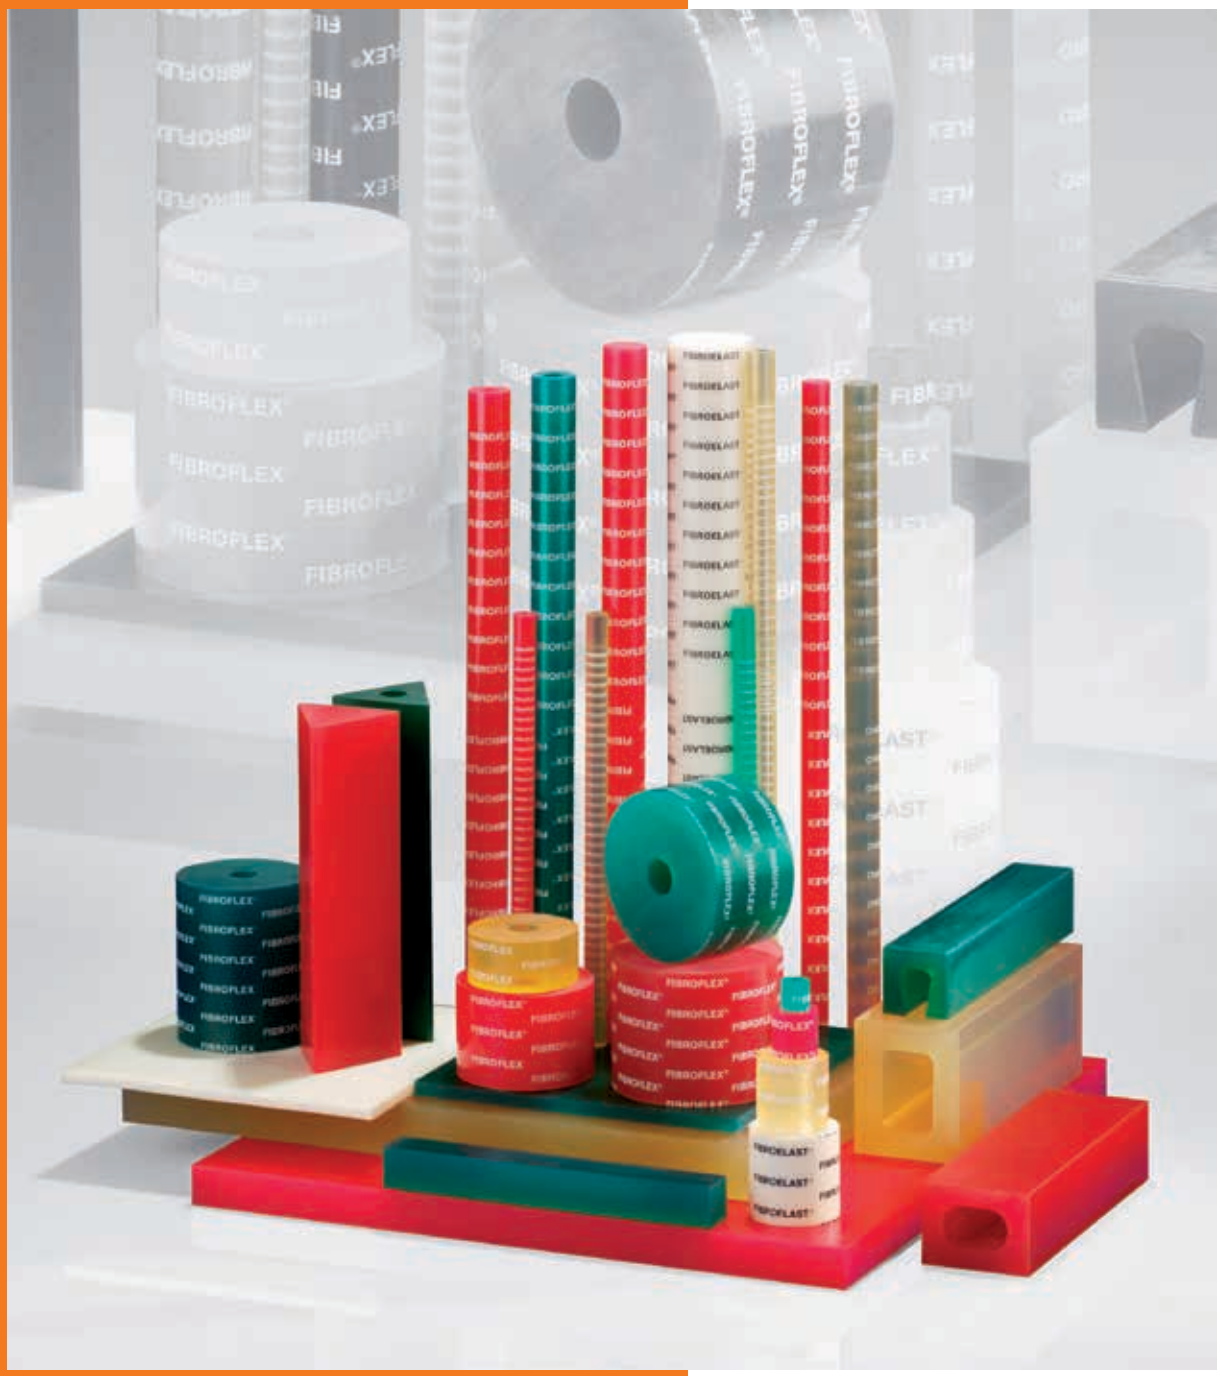
Example 2: Gas Spring fixed to top tool



Example 3: Gas Spring fixed to bottom bolster



1) storage stop pins are reversible - they are turned round and pushed down into their holes during getting the tool ready for production



Elastomer

FIBROFLEX® Forming elastomers

The occurence of small batch lots in the press shop generally makes the more expensive dies of conventional design unadvisable – and it is in this sector in particular that FIBROFLEX® Forming elastomers can offer economical alternatives.

Over many years in the past, rubber was used for metal forming work, mostly with indifferent results because of insufficient mechanical resilience and susceptibility to damage by workshop lubricants.

FIBROFLEX®, a polyurethane elastomer of very special properties, represents a synthetic material of significant advantages over all coventional rubber substances. It provides:

- highest resistance to rupturing
- outstanding elastic properties
- extensive life span when used correctly
- good thermal resilience
- inertness to all lubricants used in metal forming operations.

To the designer of forming- and shearing dies, FIBROFLEX® offers highly attractive solutions to many a tooling problem – as for instance the completion in one operation of intricate return flanges etc. Special mention ought to be made here of the specific suitability this elastomer exhibits in the forming of delicate surface-coated or surface-refined sheet metal.

The quite outstanding elastic properties of FIBROFLEX® have made it an almost indispensable material in toolrooms everywhere and also in many sectors of general engineering. Its numerous successful uses comprise bumper stops, strippers, ejector- and forming pads, spring elements as well as noise supression applications.

FIBROFLEX® Forming elastomers, available in three shore hardnesses to suit different conditions, are supplied in a comprehensive range of sections hollow and solid, also in sheet form of many dimensions.

Intended as suggestions for the solution of forming problems, a number of illustrated application examples are contained in this catalogue. Further detailled information on elastomer tooling can be found in our free publication “Elastomers in sheet metal forming and the toolroom”, which we shall gladly mail to interested customers.

Technical data on FIBROFLEX® Forming elastomer

Physical properties:

FIBROFLEX®-Type		DIN	5	6	7
Shore-A-Hardness	Shore A	53505	80	90	95
Density Density	[g/cm³]	53479	1,07	1,11	1,13
Working temperature, max.	[°C]		-40 bis +70	-40 bis +70	-40 bis +70
Rebound elasticity	[%]	53512	63	45	38
Tensile stress					
At 100% elong ation	[MPa]	53504	4,1	6,8	11,8
At 300% elongation	[MPa]	53504	8	15,2	30
Tensile strength	[N/mm²]	53504	36	38	49
Elongation at fracture	[%]	53504	450	400	360
Tear strength	[N/mm]	53515	21	29	50
Abrasion resistance	[mm³]	53516	70	50	41
Compressive Set					
70h/24° C	[%]	53517	21	26	30
Resistance to Sea Water (saline)				approximately 6 months	

Guide lines for the machining of FIBROFLEX®:

FIBROFLEX® Forming elastomers can be machined on ordinary machine tools and with conventional cutters.

A keen cutting edge is mandatory.

FIBROFLEX® Type	5	6	7
Identification colour	green	yellow	red
Shore-A-Hardness	80	90	95
Sawing Circular saw, carbide-tipped, coarse toothed Rake angle 25°–30° Clearance angle 12°–15°		vc= approx. 1600 m/min.	
Drilling		vc= approx. 30 m/min.	
Turning Rake angle 25° Clearance angle 12°–15°		v_c= approx. 140 m/min.	
Milling Rake angle 25° Clearance angle 12°– 15°		v_c= approx. 100 m/min.	

v_c = cutting speed

Please note that we can supply form parts, required in larger quantities, in the ready-cast condition. Enquiries are invited.

Technical data on FIBROFLEX® Forming elastomers

Temperature resistance

FIBROFLEX® can be used safely at temperatures up to +70°C.

FIBROFLEX® will retain most of its flexibility at temperatures as low as -40°C. A gradual increase in rigidity sets in below -18° C.

Resistance to thermal shock is excellent.

Resistance to oxygen and ozone:

No traceable influences are incurred at normal atmospheric concentrations.

Resistance to aging:

Aging shows no discernable effects in conditions of normal ambient temperatures and generally constant environmental surroundings.

Tolerance range of FIBROFLEX®- and FIBROELAST® semi-finished items:

according to DIN ISO 3302-1 tolerance class M3

Water resistance:

FIBROFLEX® exhibits outstanding long-term stability under exposure to water of up to +50°C. Swelling and/or destructive influences remain absent.

This typical resistance against hydrolysis is characteristic for the specific molecular structure of the elastomer. Water-Oil emulsions present no problems either.

These are clear advantages of FIBROFLEX® over other polyurethane elastomer structures.

Resistance to oil, chemicals, and solvents

FIBROFLEX® is presenting an excellent resistance to oil and solvents and is, particularly, suiting applications in connection with lubricating oil and fuel.

Typical data of chemical resistance are shown in the following table.

Table No 1 – R esistance to some Chemicals

Diesel Fuel	O
Mineral Fats, acc. to additives	+ to –
Vegetabilic Fats	+
Animal Fats	+
Petrol (free of alcohols)	O
Mineral Oils – depending on additives	+
Paraffin	+ to –
Rape Seed Oil	+
Lubrificants on Mineral Oil Basis	O
Soap Emulsions	–
Vaseline	+
Water at +95 °C	–
Water at +20 °C	+ to O

\+ resistant = can be used

O conditionally resistant = conditional use

– not resistant = not recommended

Please note that blended oils and fats may have detrimental influence due to their various additives. In order to eliminate any risk, it is recommended ot test the elastomer under exposure to any specific oily and/or fatty substance. Such tests ought to be run for several weeks.

Recommendations for blanking, forming and embossing operations with FIBROFLEX® Elastomer

Blanking, forming and embossing with FIBROFLEX® Tooling elastomer holds quite particular attraction for small to medium batches where, in comparison with conventional tooling, time and cost can be saved in the toolroom.

Conventional dies always depend on the highly accurate relationship between punch and matrix. This does not apply to elastomer dies. Only one part – punch or matrix – will be required. The "opposite member" is provided by the elastomer cushion. This means that elastomer dies are usually made very quickly and therefore cost less. Moreover they afford great flexibility in regard of component modification at a later stage.

Whereas the foregoing considerations left the choice of an alternative solution, presswork with surface-coated or surface-refined material usually does not: with any operational blemishes firmly ruled out, more often than not the "soft touch" of a FIBROFLEX® die is the only answer.

FIBROFLEX® Blanking dies

In the actual working cycle of en elastomer blanking die, the ram force is initially absorbed by the resistance of the deforming elastomer cushion. As the limit of deformability is reached, shearing and stock breakaway must have taken place. As a general rule it can be stated that stock of high ductility has a detrimental effect on elastomer blanking. The brittler materials on the other hand, such as spring steels, lamination quality strip and certain aluminium alloys are blanked in elastomer dies on quite a large scale. Soft materials like deep drawing steel etc. are unsuitable for the process.

Steel stock of up to 2–2,5 mm thickness can today be handled on FIBROFLEX® blanking dies, while highly accurate blanks of intricate contour can be processed from thin sheet of 0,2 to 0,01 mm thickness. It is here that the inherently uniform clamping pressure of the elastomer cushion proves its beneficial influence – as vindicated by achieveable part tolerances of ± 0,01 mm.

Metal forming with FIBROFLEX®

Projects of metal forming with FIBROFLEX® must always be based on the rule that an elastomer can be displaced but cannot be compressed. Consequently it is of para-mount importance to ensure that sufficient space is provided in an elastomer forming die for the accommodation of the displaced FIBROFLEX®

Press selection

Due to the normally somewhat greater bulk of elastomer dies, the availability of ample die space in the press has to be assured.

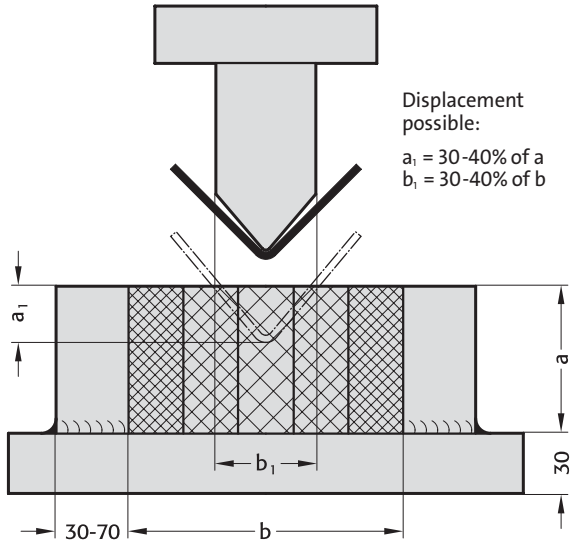
Hydraulic presses with their characteristic slow pressure rise are eminently suitable for elastomer tooling because this feature matches the somewhat delayed deformation behaviour of FIBROFLEX®.
For the same reason, mechanical presses may give a certain amount of trouble because of overloading.

Since no demands need be made on press accuracy, older machines can often be put to good use again with FIBROFLEX® tooling.

Provided applications follow these general guide lines, FIBROFLEX® Tooling elastomer will prove its enormous resilience time and again – giving shape to workpieces without losing its own.

Application examples of forming operations with FIBROFLEX® Elastomers

Fig. 5



Vee-Bending

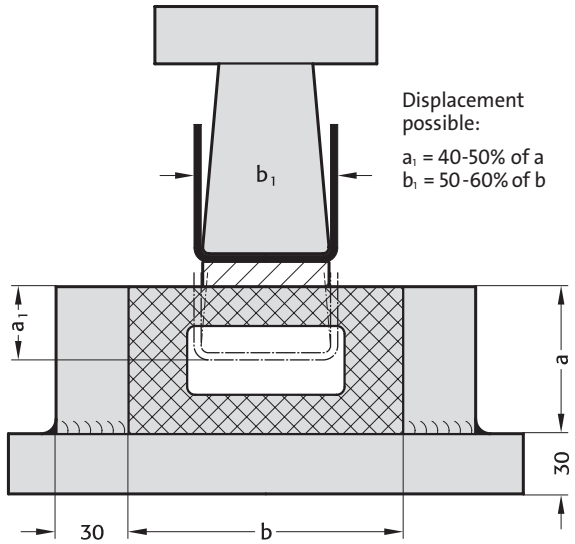
One of the easiest elastomer-forming operations is that of Vee-bending off a solid punch and into a die cushion of stacked FIBROFLEX® pads.

The necessary penetration of the punch and the amount of over-bending depend on the thickness, hardness and type of the material – and furthermore on the bending radius, the length of the free legs on the piece part, and lastly on the Shore hardness of the cushion.

Applicable to all kinds of bending operations is the general rule: the smaller the bending radius, the less will be the spring-back of the bend and the shallower is the required penetration of the punch.

Especially with larger batch quantities it is advisable to ensure all-round retention of the stacked elastomer cushion; it also pays to make punch and cushion identical in length.

Fig. 6



Bending of Vee- and U-Shapes

Bending of Vee- and U-shapes can be achieved either with stacked FIBROFLEX® pads of different hardness (Fig. 5), or with the aid of solid and hollow FIBROFLEX® Sections. These may consist of squares, channels or triangular sections.

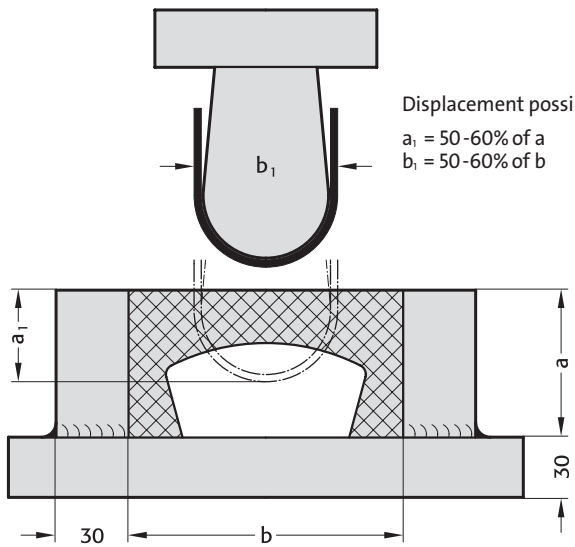
Where solid sections or sheet is used as a cushion, wear of the elastomer material can be reduced through creation of an additional displacement space at the bottom of the cushion retainer box, similar to Fig. 11, where gib inserts are placed along the corners.

Hollow cushions, as well as those of a channel configuration, exhibit greater die life and are therefore the preferred choice for bending operations.

In the case of a U-shaped bend with straight bottom it may be advisable to insert a packing of 3–5 mm thickness, and of the same width as the flat bottom of the bend, underneath the cushion. This measure increases the forming pressure and helps to achieve a flat bottom on the workpiece.

The punch should be relieved on both sides in order to avail compensation possibilities for springback.

Fig. 7



U-Bends with large radius

U-bends with a large bottom radius are difficult to accomplish. Punch penetration must of need be large; springback can be quite considerable.

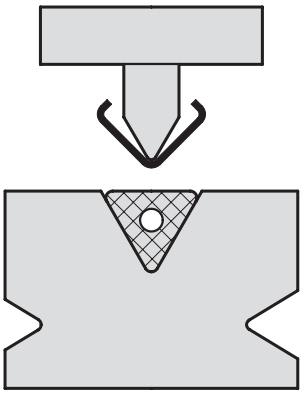
In order to achieve good results, the use of hollow FIBROFLEX® sections or of channels becomes almost mandatory. This is illustrated in Figs. 7 and 12. Another alternative consists of machined form cushions in accordance with Fig. 13.

The hollow space of the channel-shaped cushion has the effect of increasing the horizontal pressure component in the die; this also holds true for hollow die cushions.

In all cases is it necessary to ensure that the cushion retainer box is sufficiently rigid.

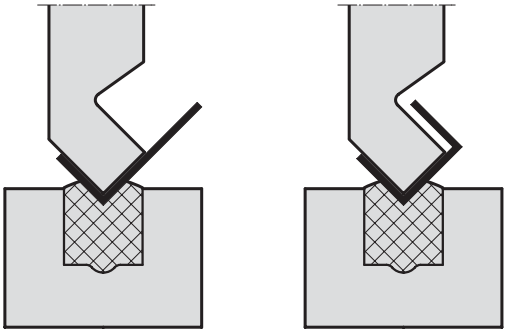
Application examples of forming operations with FIBROFLEX® Elastomers

Fig. 8



FIBROFLEX® Triangular sections are shaped to fit into the existing forming grooves of bending brake dies, thus eliminating die changes and/or the provision of a die cushion retainer box as required with square cushion configurations.

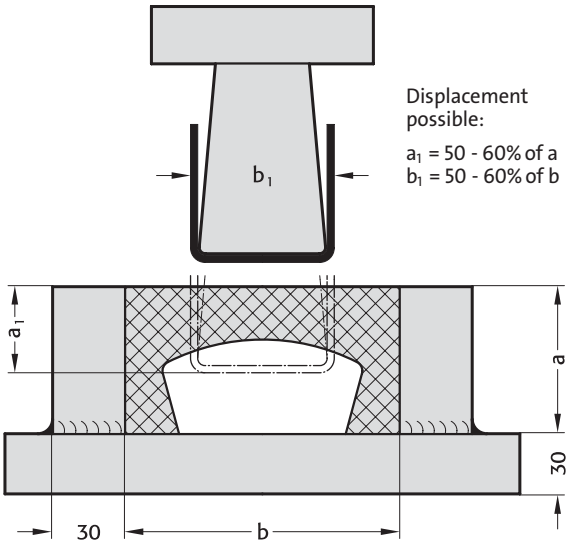
Fig. 9



Depending on stock specifications the bending of a channel section may either be done off a Vee-shaped punch as a voluntary choice – or it may become an absolute necessity.

Two operational sequences are required, and a goose-necked punch configuration is essential.

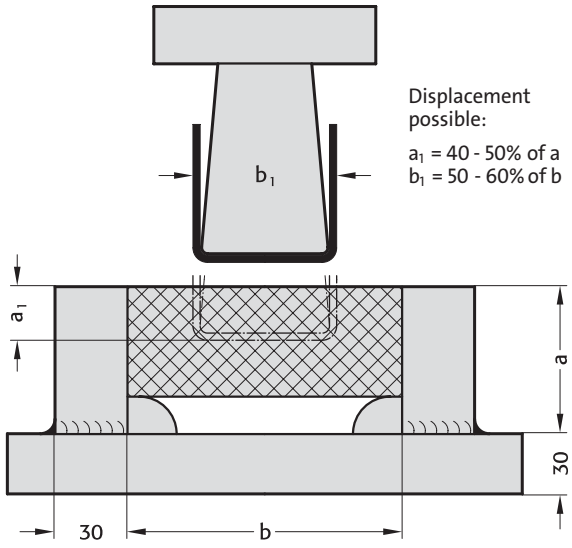
Fig. 10



Displacement possible:

a_1 = 50 - 60% of a
b_1 = 50 - 60% of b

Fig. 11



Displacement possible:

Blanking and forming with FIBROFLEX®-Elastomers

Blanking and forming with FIBROFLEX®-Elastomers

Description

FIBROFLEX® forming materials for blanking, embossing and forming are eminently suitable for use in small and medium series production. The main advantage is the reduction in tooling costs compared with traditional productions methods.

This means that, even with considerable workpiece changes or with prototypes, you can respond quickly to changing market requirements and delivery times.

You can avoid scratching or damaging the icreasingly common coated an highly polished sheet metals by using the gentle touch of elastometers for the forming process.

Forming with FIBROFLEX®

When forming using elastometers, always remenber the golden rule: whatever the extent of the deformation, the elastic FIBROFLEX® forming material remains constant, i.e. it can be displaced, but not compressed. The design must allow the elastomer to “flow” into a relief gap – that is the secret of success.

Choice of machine

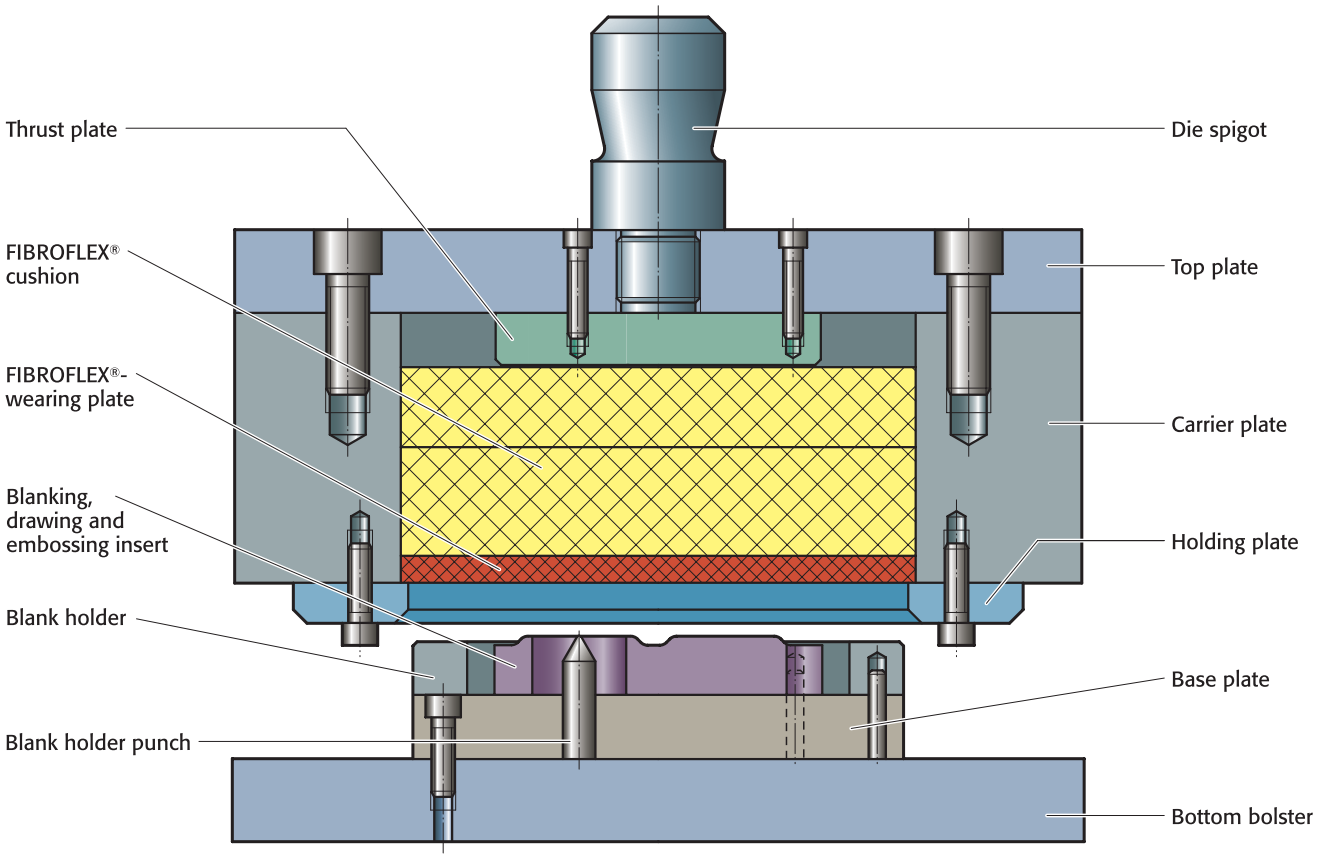
When FIBROFLEX® matrices are used for blanking, embossing and forming the machine must be able to accommodate the displacement.

Hydraulic presses are preferable to mechanical presses because of their gradual pressure build-up which suits the characteristics of the FIBROFLEX® forming material as it changes shape.

If a mechanical press is overloaded as it approaches bottom dead centre (which is also the cutting point), there is an risk of the press being damaged.

With FIBROFLEX® the machine is not subjected to any stresses, so even old machines can be used.

FIBROFLEX® Forming tool blanking – drawing – embossing



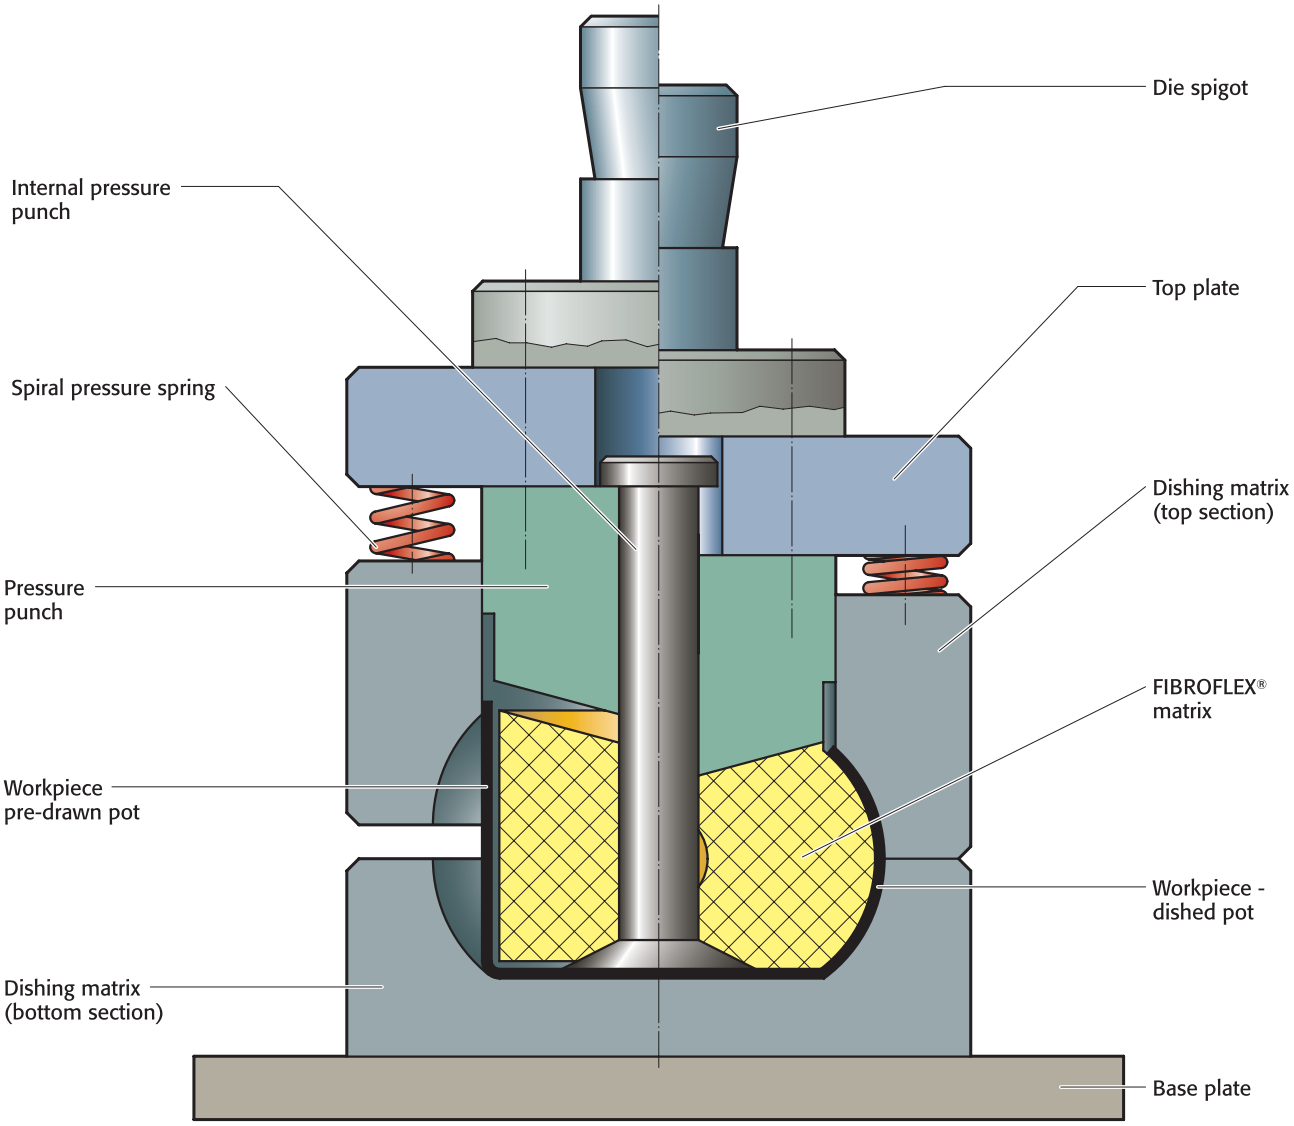
Combined blanking – embossing – punching

The workpiece is completed at one pass. The shape is determined by the combined blanking, hole cutting and embossing matrix blank holder punch, without a reverse shape mould on the cushion side.

The thrust plate in the carrier produces a concentration of pressure which produces a better result in the active tool range. The thrust plate also provides the necessary compensation for constant volume.

When producing workpieces of a different shape, only the tool elements in the lower section which produce the shape have to be exchanged.

FIBROFLEX® Forming tool dishing



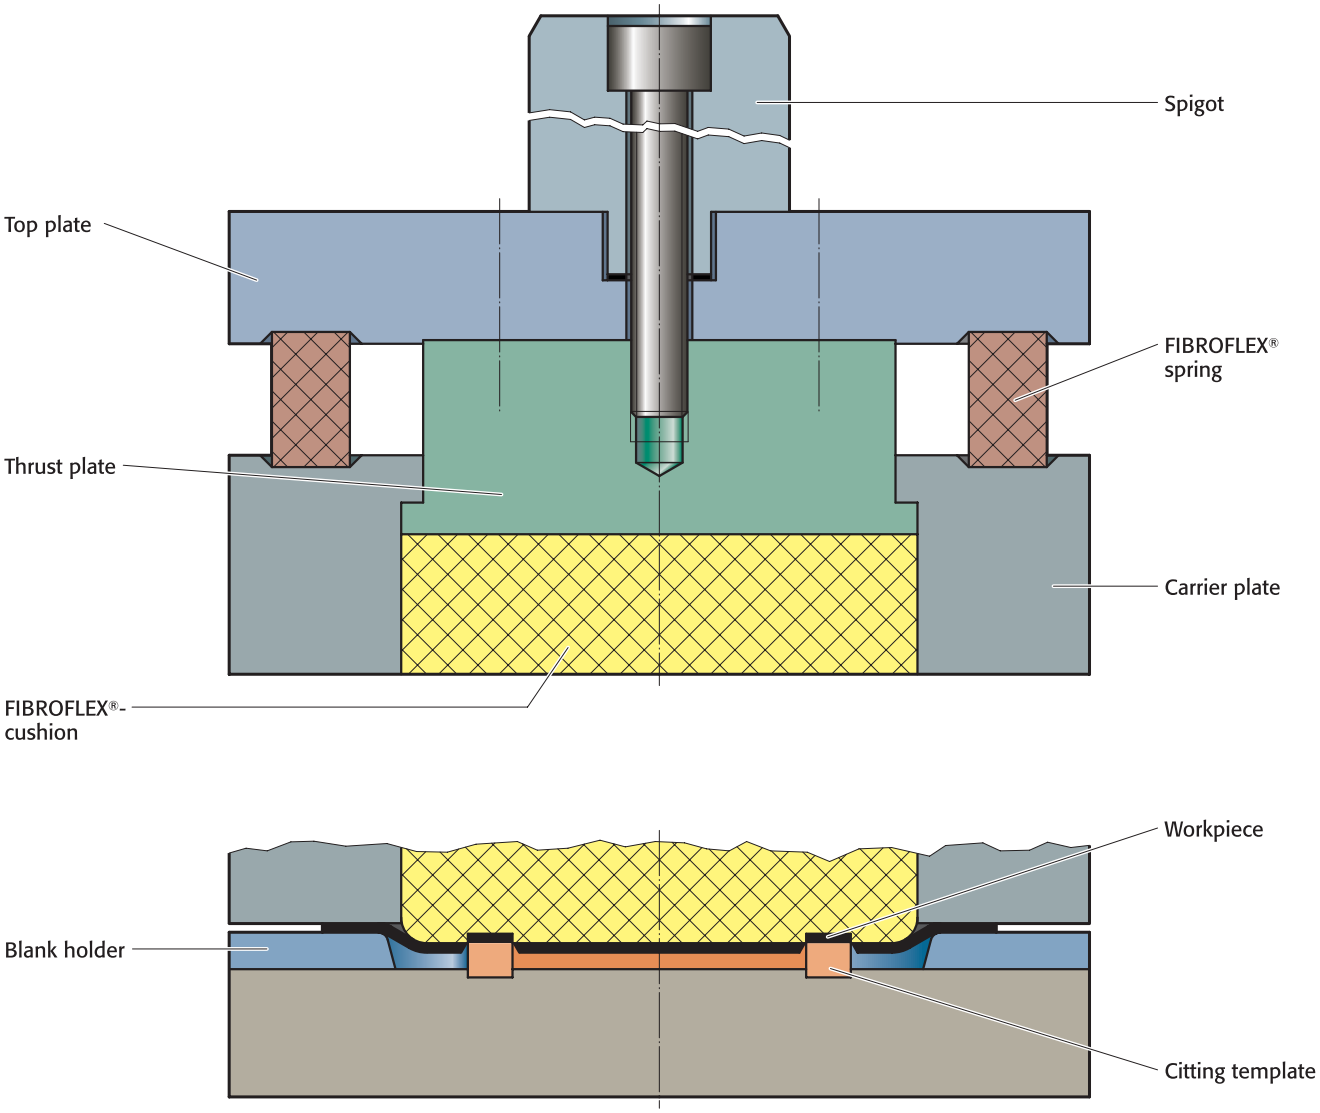
Bulging a pot

For flaring and bulging operations we recommend the use of FIBROFLEX® concave profiles wherever possible.

The wedge shape of the elastomer and the shape of the pressure and counter pressure punches both encourage the elastomer to deform in the required direction.

For bulging work it is worth taking into account the basic principle for FIBROFLEX®, namely that it maintains a constant volume. (Displaced volume equals bulging volume – see also description on page G17).

FIBROFLEX® Universal blanking and forming carrier



FIBROFLEX® blanking matrices

When blanking with elastomers, the workpiece materials, in contrast to the traditional blanking of workpiece materials, are subjected to their elastic limits, beyond which the material breaks.

The thickness of sheet steel which can be cut usting FIBROFLEX® is currently up to 2.5 mm.

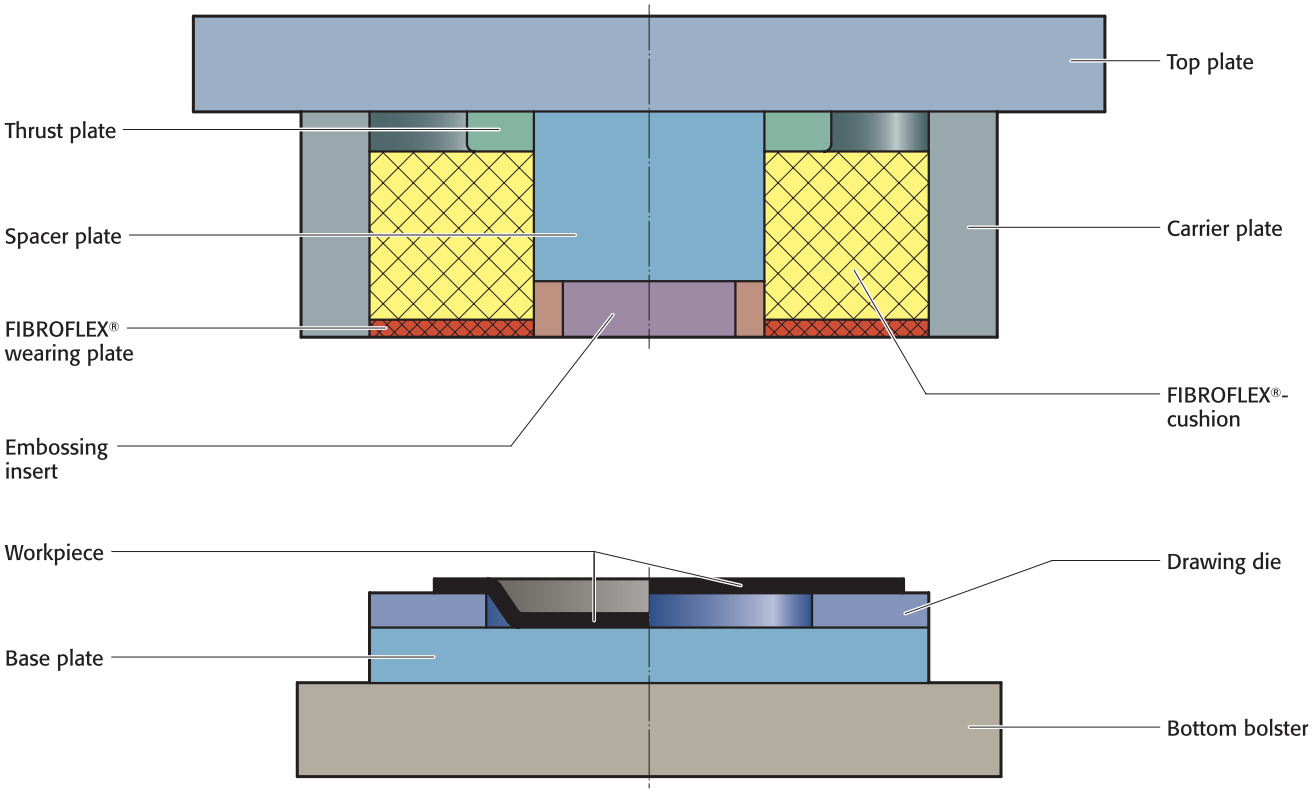
The even clamping pressure which is excellent for pressing also means that parts with intricate contours can be manufactured.

It is possible to achieve workpiece accuracy of ± 0,01 mm.

During the blanking process the press pressure first deforms the elastomer. As soon as the elastomer reaches the limits of its deformation the workpiece is cut.

The less the stretch of the sheet metal, the easier it can be cut using the elastomer blanking process. Spring band steels, electric sheets and sheet aluminium all cut well using this process. Deep-drawing sheet steel is unsuitable for the elastomer blanking process.

FIBROFLEX® Forming tool drawing – embossing



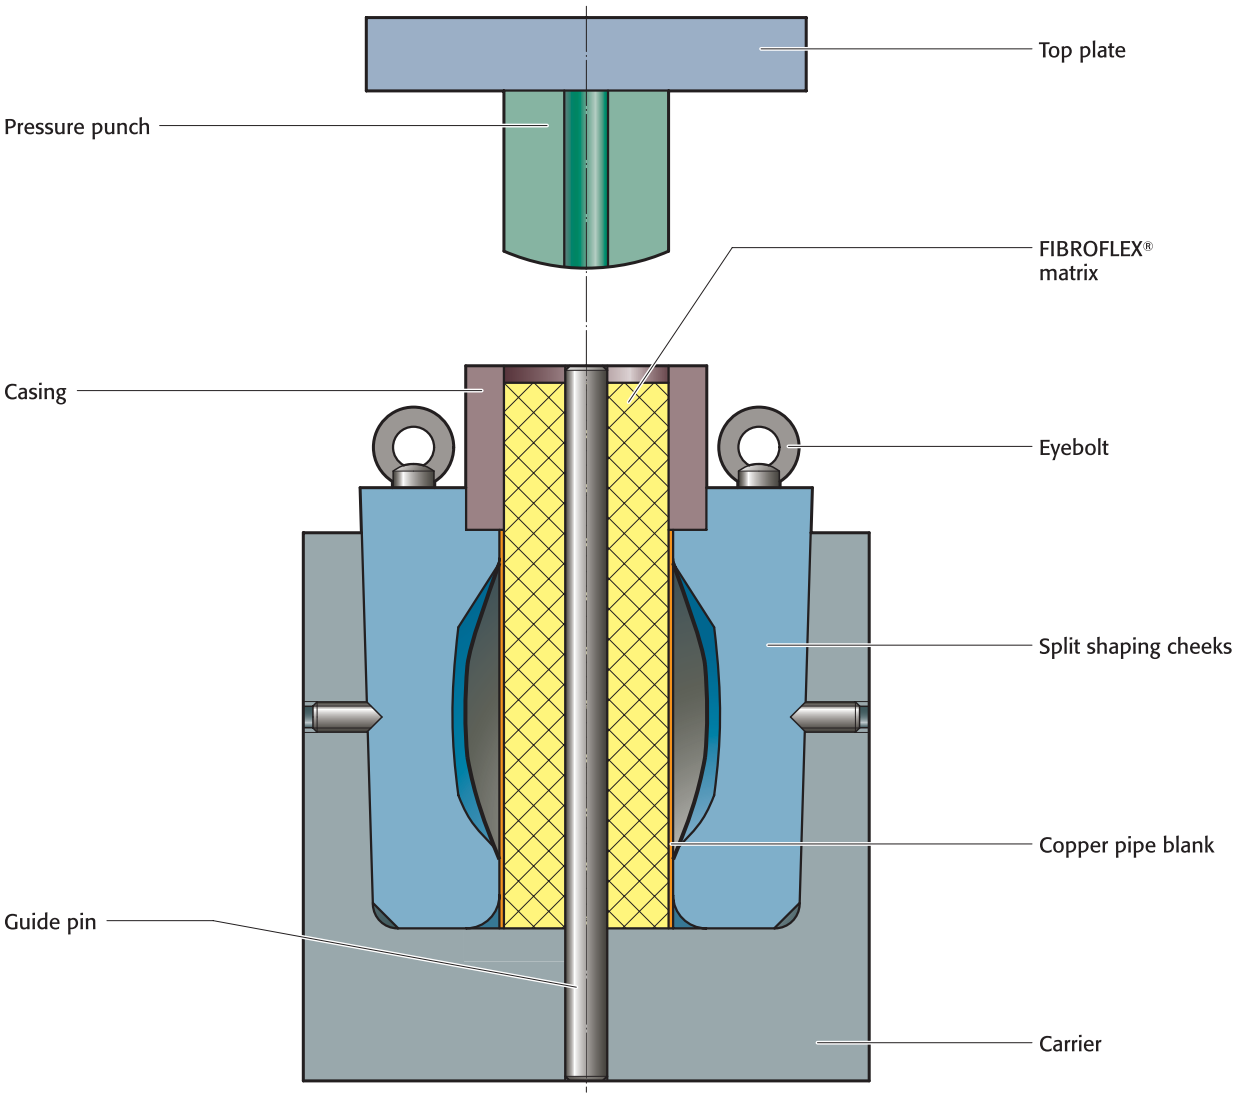
Drawing and embossing

The limits for flaring and bulging depend on the workpiece material, its thickness and hardness and also the height of the FIBROFLEX® cushion.

Maximum permissible deformation of the FIBROFLEX® cushion:

80 Shore A – 35%
90 Shore A – 30%
95 Shore A – 25%

FIBROFLEX® Forming tool for flaring pipes



Flaring pipes

When flaring using FIBROFLEX®, split cheeks with a conical external surround are required to allow the workpiece to be released.

Depending on wall thickness, flaring ratios of 1.2 can be achieved. Above a workpiece diameter-to-length ratio of 2 : 1 it is advisable to use concave cushions with bolt guides.

FIBRO-CHEMICAL TOOLING AIDS

GENERAL INFORMATION

Safety data sheets

The safety data sheets obligatory for the chemical products can be found on our website (www.fibro.de) for the Standard Parts division under Downloads .

Information on availability in your country/region

The legal requirements for chemical products have become significantly more stringent in recent years. As part of the European Union, the same conditions have been established with the CLP/REACH ordinance. Nevertheless, there are additional country-specific regulations or laws that are to be observed for delivery to EU countries.

Outside the EU, it is still considerably more complex, even though a number of countries are basing their regulations on CLP/REACH.
FIBRO as a manufacturer and reseller is obligated to meet all laws and regulations.

Therefore, please note that the products may not be available in your country!

Please also note that chemical products can only be used in countries where the language on the labels corresponds to the official language as appropriate.

TOOLING RESIN - DESCRIPTION
TOOLING RESIN FIBROLIT®-ZWO
TOOLING RESIN FIBROFIX®-SECHS

Description:
The two tool casting resin products 280.02 FIBROLIT®-ZWO and 280.08 FIBROFIX®-SECHS are used in very different applications and each consist of the two components casting resin and hardener.

Casting resin and hardener are mixed in a certain ratio and react irreversibly to form a solid (thermoset) through a chemical cross-linking reaction. The cross-linking reaction is started by mixing the casting resin and hardener. During what is known as the pot life, the casting resin is liquid and processable. It must then be processed mechanically.

For the typical use in tool-making, the casting resin contains optimised fillers. The hardener contains accelerators and additives that ensure a curing time that is not excessively long.

For surfaces on which the tool casting resin should not adhere, the use of 280.822405 release agent or 280.27 release agent FIBROLIT®-TW is recommended.

Casting resin and hardener are substances which are hazardous to health and the environment when not cured. Special protective measures according to the safety data sheets must therefore be observed.

280.02 Tooling resin FIBROLIT®-ZWO

Description:
The tool casting resin FIBROLIT®-ZWO is an epoxy resin for use in tool construction and other applications. The can size is dimensioned so that thorough stirring and mixing can be carried out in the can. The two components are optimally matched with regard to the quantity ratio to guarantee complete curing of the casting resin. The casting resin must be thoroughly stirred before and after adding the hardener. This is the only way to ensure perfect curing.
If smaller quantities are to be removed, a mixing ratio of casting resin/hardener of 18:1 (parts by weight) must be observed.

Note:
Follow the instructions for use!
Physical characteristics, chemical resistance and application examples on the following pages.

Despatch packaging contains:
1 can of casting resin, 365 ml
1 bottle of hardener, 50 ml

280.08 Tooling resin FIBROFIX®-SECHS

Description:
Casting resin units for fast and clean processing of small quantities of casting resin. FIBROFIX®-SECHS has the same properties as FIBROLIT®-ZWO, so the same processing instructions apply. The application is preferably carried out with an injection gun 280.09.

Note:
Follow the instructions for use!
Physical characteristics, chemical resistance and application examples on the following pages.

Despatch packaging contains:
6 cartridges of casting resin, 33 ml
6 hardener ampoules, 4 ml
1 stirring rod

HARDENER
THINNING AGENT FOR FIBROLIT® ZWO
INJECTION GUN FOR FIBROFIX®-SECHS

280.05 Hardener

Description:
Individual hardener for 280.02 FIBROLIT®-ZWO tool casting resin or for use with epoxy resin 280.24 thinning agent for FIBROLIT®-ZWO.

Bottle, 50ml (280.05.0050)

280.24 Thinning agent for FIBROLIT® ZWO

Description:
To increase the flow properties of FIBROLIT® ZWO tool casting resin, the thinner (pure epoxy resin) can be added in a specific ratio (max. 5% = 45 g).
It must be noted that the addition of thinner will extend the curing time.
The thinner can also be used together with hardener 280.05 as a casting resin. A resin/hardener mixing ratio of 5:1 (by weight) must be observed.

Can, 500 ml

280.09 Injection gun for FIBROFIX®-SECHS

Description:
For simple application of FIBROFIX®-SECHS 280.08.
The casting resin cartridge is compressed by means of a threaded spindle and removed from the injection gun after emptying.

TOOLING RESIN FIBROLIT®-ZWO / FIBROFIX®-SECHS - EXAMPLE APPLICATIONS

Casting of punch guides in guiding strippers

(with sliding movement)

Suitable apertures in the stripper can be marked out from finished matrix. Allowance must be made for a casting gap of 1 - 3 mm around the punch.

Prolonged storage and cold can cause the resin to become stiff and unworkable. Place resin container in hot water of about 60 °C, then stir thoroughly and let cool down to room temperature.

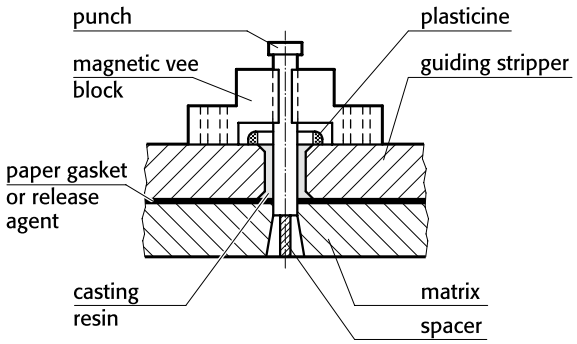

Fig. 1:
Casting of punch guide in guiding stripper

Quite often it will suffice to drill a hole in approximation of a shaped aperture – as shown in fig. 2.

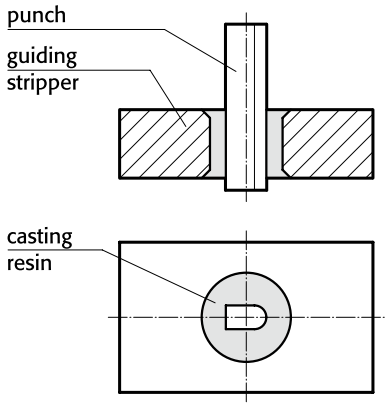

Fig. 2:
Cast guide for form punch

For casting of very narrow gaps there is also the option to use FIBROLIT® thinner.
The sawn or drilled contours must be degreased. As shown in figure 1, the prepared guide plate is clamped with the cutting plate and the punch, the punch coated with a release agent is inserted into the opening and aligned. Before casting, it is advisable to limit the overflowing casting resin mass with a plasticine edge. It also serves as a casting aid. Paper or release agent is applied between the cutting and guide plates to prevent mutual sticking. The vertical position of the punches is achieved via a magnetic angle. There are various methods for maintaining the kerf in the cutting plate.
A common method for alignment between the punch and the hole in the hardened cutting plate, which is also preferable for repairs, is the interposition of metal foils or nylon fabrics according to the desired kerf. In the case of split cutting plates ground to shape, it is also customary to pregrind the apertures first cylindrically without kerf. Only after casting the guide plate are the kerf and regrinding implemented on the cutting plate inserts.

With simple dies, the following execution leads to expedient and good results:

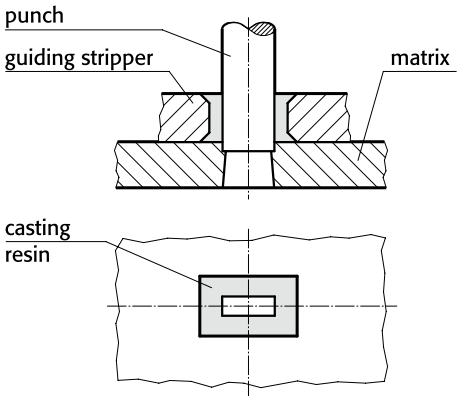

Fig. 3:
Casting of punch guide with basic blanking tools

The punch is aligned in terms of dimensions and angles. After pressing the punch into the cutting plate, the guide rails are removed and the cutting plate is pinned to the guide plate prepared for casting.
This is followed by casting and finishing the cutting plate breakthrough.

For guide cuts, the guide plate or the wiper can be provided with additional plates on the underside, figure 4. These plates prevent premature wear of the punch guide plate. The oil pan for fast-running tools is also produced during the pouring process.

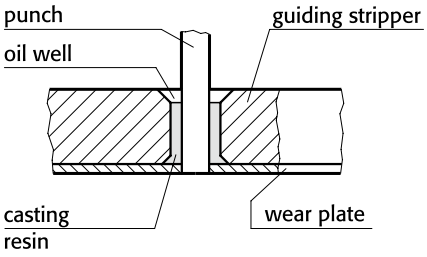

Fig. 4:
Cast punch guide with oil well and wear plate underneath stripper

Quill punches ought to be given maximum support over their length; a typical cast stripper guide for such thin punches is shown in fig. 5.

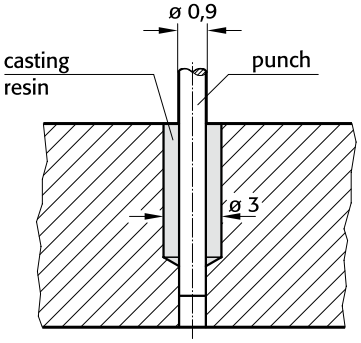

Fig. 5:
Cast guide for thin Quill-Type Punch

TOOLING RESIN FIBROLIT®-ZWO / FIBROFIX®-SECHS - EXAMPLE APPLICATIONS

Figure 6 shows a punch guide plate with dowel pins (235.1). The holes for the dowel pins are drilled on the jig boring machine and the hole is sawn out. After the hardened dowel pins have been pressed in, the punch is cast. The punch guide is more wear-resistant due to the line contact between the punch and the cylindrical pins and alignment is not necessary.

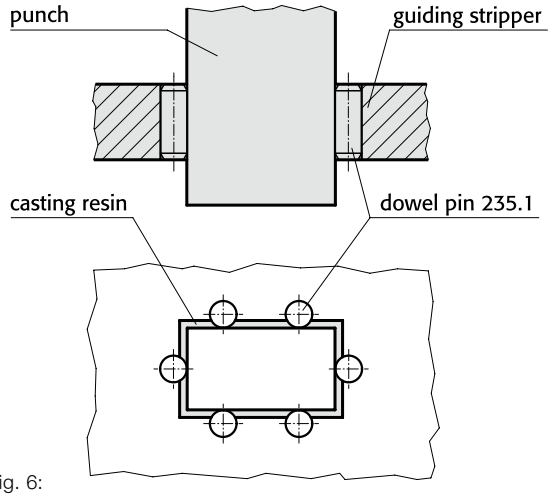

Fig. 6:
Cast punch guide with jig-bored positioning dowel pins

A punch guide plate with a large number of forming punches is shown in figure 7. All holes are drilled or sawn and then cast.

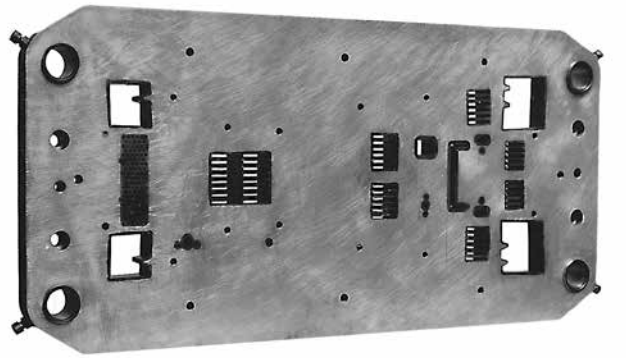

Fig. 7
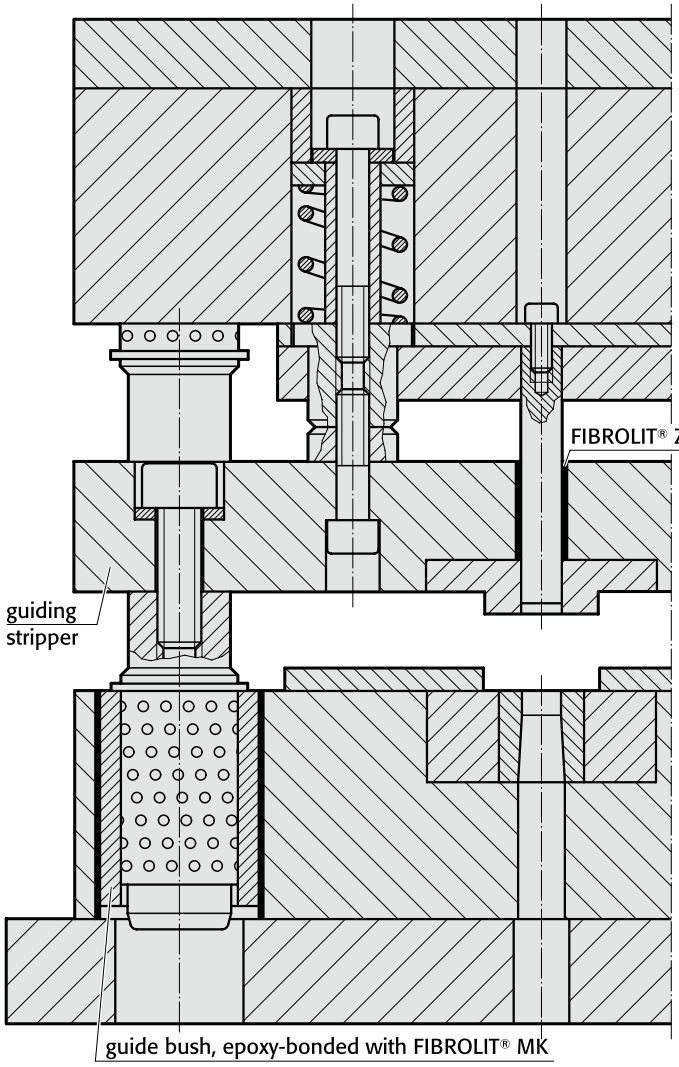
Cast punch guide plate

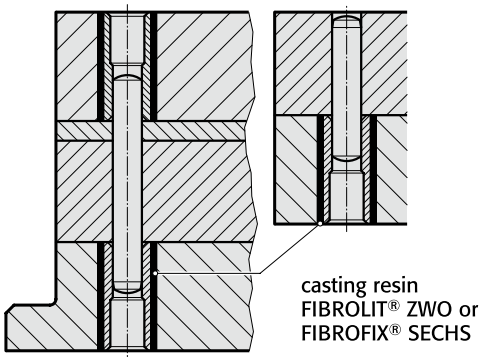
We would like to be able to calculate for you how much time (time = money!) has been saved with this tool alone. This is not really possible using a photo, though. As an expert, you are certain to be able to see the potential savings here for yourself.

Examples of epoxy-casting and epoxy-bonding work in a progression die



Cast cylinder pin bushes:

These hardened Liner Bushes are used to great advantage where it is necessary to dismantle or replace unhardened components frequently – for instance in precision stamping dies etc.
The jig-ground dowel pin holes in the hardened and ground plates assure perfectly accurate interchangeability.
The unhardened counterpart is brought into precise position and alignment by way of casting-in of the hardened liner bushes. Either FIBROLIT® ZWO or FIBROFIX® SECHS is used for casting.



TOOLING RESIN FIBROLIT®-ZWO / FIBROFIX®-SECHS - PROPERTIES
THINNING AGENT FOR FIBROLIT®-ZWO - PROPERTIES
FIBROLIT®-MK METAL ADHESIVE - PROPERTIES

Physical properties tooling resin FIBROLIT®-ZWO / FIBROFIX®-SECHS:

viscosity at 25 °C	approx. 9000 mPas
pot life at 25 °C (mixed = 100 g)	approx. 25 min.
curing time at 20 - 25 °C*	approx. 24 h
shelf life at 20 - 25 °C	approx. 1 year
thermal resistance (Martens) DIN 53458	approx. 50 - 55 °C (75 - 80 °C*)
flashpoint of resin	approx. 210 °C
flashpoint of hardener	approx. 207 °C
decomposition temperature (ISO/R 871-68)	>300 °C
Thermal conductivity, within range of 14-38 °C (VDE 0304 section 1/7.59)	0,531 W/km
density (resin)	approx. 2,5 g/ml
density (hardener)	approx. 1.06 g/ml
compressive strength DIN EN ISO 604	approx. 130 - 140 N/mm2
tensile strength DIN EN ISO 527-1, -2, -3	approx. 50 N/mm2
flexural strength DIN EN ISO 178	approx. 70 N/mm2
ball indentation test DIN EN ISO 2039-1	approx. 213 N/mm2
impact test	3,57 KJ/m2
modulus of elasticity (ex tensile test)	approx. 8760 N/mm2
linear shrinkage	approx. 0.05 - 0.12 %

*Cured at ambient room temperature for 24 hours, or 15 hours at 50 °C

Physical properties thinning agent for FIBROLIT®-ZWO:

Density	1,16 ± 0,02 g/ml
flash point (DIN 51584)	97 °C
shelf life at 20 - 25 °C	approx. 1 year
viscosity at 25 °C	1000 ± 100 mPas

Physical properties metal adhesive FIBROLIT®-MK:

density of Resin MK	1,16 ± 0,01 g/ml
density of Hardener MK	1,13 ± 0,01 g/ml
tensile shear strength	40 - 50 N/mm2
thermal resistance (Martens)	45 - 50 °C
pot life (100 g-mixture)	15 - 20 min
shelf life at 20 - 25 °C	approx. 1 year
time for complete curing at 20 - 25 °C	approx. 24 h

METAL ADHESIVE FIBROLIT® MK
RELEASE AGENT ACMOS
RELEASE AGENT FIBROLIT® TW

281.01 Metal adhesive FIBROLIT® MK

Description:
Two-component adhesive based on epoxy resin. Mixing ratio of the resin and hardener is 2:1 by weight.
The adhesive should ideally be applied with a brush to the degreased parts to be joined. Rough surfaces improve adhesion of the metal adhesive.
After only 6.5 h, the adhesive reaches a tensile shear strength of 30 N/mm^2. The final strength is achieved after approx. 24 h.
The metal adhesive is suitable for an adhesion gap of 0.6 - 0.7 mm.
Adhered bushings retain their geometric roundness and accuracy to gauge via adhesion.

Despatch packaging contains:
1 can of resin, 217 ml
1 can of hardener, 119 ml

280.822405 Release agent ACMOS

Description:
Silicon-free release agent as a spray.
Application during casting for sliding parts such as gliding pins, punches etc. with 280.02 FIBROLIT®-ZWO epoxy casting resin or 280.08 FIBROFIX®-SECHS tool casting resin.
Spray on release agent thinly and evenly from a distance of 20 to 30 cm.
A smooth surface is achieved by rubbing with a soft cloth.

Aerosol spray can, 400 ml

280.27 Release agent FIBROLIT® TW

Description:
Wax-based release agent for further guide clearance.
Application during casting of sliding parts such as gliding pins, punches etc. with 280.02 FIBROLIT®-ZWO epoxy casting resin or 280.08 FIBROFIX®-SECHS tool casting resin.
Particularly suitable for rougher mould surfaces. Quick-drying and easily polishable.
Apply the release agent with a cloth and rub in well. Repeated application will produce increased clearance between the part and the resin.

Can, 500 ml

RUST/CORROSION RELEASING LUBRICANT/AGENT FIBROLIT®-RL
MARKING OUT BLUE FIBROLIT®-ARF

280.15 Rust/corrosion releasing lubricant/Agent FIBROLIT®-RL

Description:
Seeps quickly and reliably into the smallest gaps to take effect there. Releases all kinds of metal joints seized due to rust (screws, bolts, nuts, etc.) and loosens them. This eliminates the need for mechanical treatment which would otherwise often be required, with the associated risk of damage.
Removes stubborn incrustations, resin deposits and accumulations of dirt that impair the functioning of moving parts.
Provides lasting protection against rust and corrosion and ensures excellent lubrication of all moving parts and joints treated with it.

Aerosol spray can, 300 ml

280.131 Marking out blue FIBROLIT®-ARF

Description:
Fast drying, excellent contrast (strength and tint) on all metals, dark blue marking dye. Enables exact marking and precise cutting contours.
The surfaces must be degreased before application.

Aerosol spray can, 400 ml

280.23 Marking out blue FIBROLIT®-ARF

Description:
Same properties as 280.131 FIBROLIT®-ARF blue marking dye.

Can, 500 ml

LEAK DETECTOR SPRAY FIBROLIT®-LSP
HYDRAULIC OIL FIBROLIT®
COOLING LIQUID FIBROLIT®

280.20 Leak detector spray FIBROLIT®-LSP

Description:
Reliable and fast detection of leaks in gases and compressed air. Testing of soldered, screwed and welded connections, fittings, valves, pressure vessels, flexible pipes, pipelines; in short, anything that has to be leak-proof. Use with all gases: compressed air, oxygen, nitrogen, hydrogen, town gas, natural gas, liquid gas, carbon dioxide, nitrous oxide, acetylene, propane, butane, other flammable gases, etc.
Spray the suspected leakage areas and easily visible foam bubbles will appear at the location of any leaks. The valve also permits spraying from below.
Non-flammable and non-corrosive.

Aerosol spray can, 400 ml

280.37.032. Hydraulic oil FIBROLIT®

Description:
High-quality hydraulic oil (DIN 51524 HVLP ISO VG32) based on mineral oil with corrosion and oxidation inhibitors as well as additives to reduce wear. Very good viscosity/temperature response. Preferably for the encoder/receiver system (hydraulic cylinders and tool slides for tool, mould and machine construction) from FIBRO.

Can, 1 l (280.37.032.01)
Can, 5 l (280.37.032.05)

281.620. Cooling liquid FIBROLIT®

Description:
Water/glycol liquid (HFC).
Preferably for controllable gas springs (KF springs) from FIBRO.

Can, 5 l (281.620.05)
Can, 10 l (281.620.10)
Barrel, 50 l (281.620.50)

STAMPING LUBRICATING OIL FIBROLIT®

280.36.006 Stamping lubricating oil FIBROLIT®

Description:
Lubricating fluid that evaporates at ambient temperature without residue. No cleaning or degreasing required. This permits subsequent welding, soldering or common surface treatments (a suitability test is nevertheless obligatory). Excellent lubricating effect, resulting in low burr formation and extended service life on the active elements of stamping dies.

Note:
Application can be carried out by dipping, spraying and rolling. The layer thickness should be as small as possible. The use of wipers ahead of press ingress successfully controls lubricant layer. Drying time depends on temperature and time span. This time is shortened with air or heat drying.

Canister, 1000 ml (280.36.006)
Canister, 5000 ml (280.36.006.5)

Application:
- stamping of components from transformer sheet
- stamping of generator and transformer sheets and sheets for electrical components
- all kinds of forming operations
- aids for stamping and bending operations
- stamping and forming of car radiator parts

Particularly useful when punching metal sheets made of steel (carbon steel, stainless steel), aluminium, galvanised and painted sheets and copper alloys.

FIBROLIT® FETT/OEL-LD - DESCRIPTION
GREASE FIBROLIT®FETT-LD
LUBRICATING OIL FIBROLIT®OEL-LD

Description:
FIBROLIT®-FETT/OEL-LD is a coordinated lubrication concept for guide bushes made of sintered iron with a carbonitrided sliding surface for long-term and permanent lubrication.
Sintered guide bushes from FIBRO have a porosity content of 18-20% and are impregnated with 280.35 FIBROLIT®-OEL-LD lubricating oil under vacuum.
In addition to the constructive design, this impregnation provides the necessary lubricating film during operation due to capillary action. This is critical for the reliable function and long service life of the sintered guide bushings.
The FIBROLIT® FETT-LD plastic grease is the perfectly coordinated depot lubricant. This grease can also be inserted into the supply grooves of the sintered bushings, which in many cases increases the service life of the sintered guide bushings even further. To reduce start-up wear, the initial use of FIBROLIT® FETT-LD grease is recommended.
Other factors such as the good ageing stability, oxidation resistance and thermal stability of the two lubricants are equally essential for a long service life.
Please note that the use of other lubricants may lead to chemical instability of the oil impregnation!

280.34 Grease FIBROLIT®Fett-LD

Description:
Plastic oil reservoir in the form of a gel-type lubricant based on mineral oil. Initial and depot lubricant (long-term additional lubrication) for all guide bushes made of sintered iron with carbonitrided surface. Can be introduced into the supply grooves of the sintered guide bushings for this purpose. In particular in the case of applications with higher loads, the oil leakage in the sintered guide bush is compensated. High reliability and low maintenance usage due to controlled oil release.
Application temperature range: -40 °C to +150 °C

Can, 400 ml

280.35 Lubricating oil FIBROLIT®Oel-LD

Description:
Mineral oil-based impregnating fluid for lubricating guide bushes made of sintered iron with carbonitrided sliding surface. Suitable for a wide range of applications due to the formulation and special additives. As additional or re-lubrication to compensate for oil leakage.
Application temperature range: -10 °C to +100 °C

Can, 1000 ml

QUICK CLEANER LOCTITE® SF 7061
DEGREASER EM30+

281.706 Quick cleaner LOCTITE® SF 7061

Description:
CFC-free, solvent-based universal parts cleaner (acetone-based) used for purifying and cleaning surfaces. Before assembly, the product is used for the final cleaning and removal of most greases, oils, lubricating fluids, metal chips and ultra-fine particles from the adhesive surfaces. Due to its high dissolving power, it is also very well suited for other degreasing or parts cleaning tasks.
It evaporates without residue.

Aerosol spray can, 400 ml

281.30 DEGREASER EM30+

Description:
Very effective degreaser and cold cleaner with short reaction time and fast and residue-free evaporation. Versatile for cold degreasing and purifying heavily soiled parts and surfaces. Listed by NSF® for use in the foodstuff and pharmaceutical industry.
Rapidly removes grease, oil, dirt, dirt deposits, graphite and coal dust residues. Removes tar, semi-dried paint, acrylate putty, glue, hotmelt, resins, polymers, liquid sealants, adhesives, waxes, bitumen, etc. Very good alternative to acetone, turpentine, benzine, white spirit, trichloroethylene, toluene and other dangerous cleaning agents.
Max. usage temperature: 30°C

Aerosol spray can, 500 ml

OIL LOCTITE® LB 8001
SILICON OIL LOCTITE® LB 8021

280.8001 Oil LOCTITE® LB 8001

Description:
Mineral oil-based, colourless, odourless, universal-use mineral oil spray that penetrates inaccessible areas of mechanisms, e.g. valve seats, hubs, chains, hinges and cutting knives in plants of the food processing industry and in sewing machines. It protects against friction and wear and achieves good lubrication at all speeds within its usage temperature range from -20 to +120 °C.

Aerosol spray can, 400 ml

280.8021 Silicon oil LOCTITE® LB 8021

Description:
Universally applicable, low-viscosity silicone oil which is used to lubricate metallic and non-metallic surfaces (e.g. guides, conveyor belts, cutting knives and plastic parts). It can also be used as a mould release agent.
After complete flash-off of the solvent, the product is suitable for use for applications with continuous temperature loads from -30 °C to +150 °C and with peak temperature loads of -50 °C to +250 °C.

Aerosol spray can, 400 ml

THREADLOCKER, MEDIUM-STRENGTH LOCTITE® 243
THREADLOCKER, HIGH-STRENGTH LOCTITE® 2701
???

281.243 Threadlocker, medium-strength LOCTITE® 243

Description:
Universally applicable medium-strength threadlocker. Secures screws, nuts and bolts up to max. M36 against loosening due to vibration, and seals at the same time. Suitable for all metals, including passive materials such as stainless steel, aluminium and galvanised surfaces. Has proven tolerance to minor contamination from industrial oils, e.g. engine, corrosion protection and cutting oils. Bonds can be dismantled for maintenance using hand tools.
Functional strength: after 2 hours (22 °C)
Usage temperature range: -55 to +150° C
Breakaway torque (M10 screws): 10 Nm

Bottle, 50 ml

281.270 Threadlocker, high-strength LOCTITE® 2701

Description:
Green, low-viscosity, vibration-resistant, methacrylate-based threadlocker for high-strength connections up to max. M20, especially for chrome-plated surfaces. Prevents unwanted movements, independent loosening, leakage and corrosion in the thread. Tolerates low oily contamination from industrial oils. Suitable for all threaded metal connections. Fluoresces under UV light. Secured parts cannot be dismantled easily.
Handling strength in 10 min. on steel, 4 min. on brass and 25 min. on stainless steel.
Usage temperature range: -55 to +150 °C
Breakaway torque (M10 screws): 38 Nm

Bottle, 50 ml

281.648 Retaining compound, high-strength LOCTITE® 648

Description:
For bonding cylindrical components, e.g. bearings, bushings, bolts and similar machine parts. Hardens under exclusion of air between tightly fitting metal surfaces and enables the transmission of higher forces and outputs with existing geometry and design solutions. For adhesion gap sizes up to 0.15 mm.
Preferably for the fitting of guide bushes from FIBRO.
Functional strength: after 5 min.
Usage temperature range: -55 to +175 °C

Bottle, 50 ml

EPOXY ADHESIVE LOCTITE® EA 3450
INSTANT ADHESIVE LOCTITE® 401
INSTANT ADHESIVE GEL LOCTITE® 454

281.147 Epoxy adhesive LOCTITE® EA 3450

Description:
Two-component epoxy adhesive that cures rapidly at ambient temperature after mixing. Develops high strength on metal surfaces. Due to its splitting capacity, it is suitable for rough and poorly fitting surfaces made of metals, ceramics, thermosets. For the high-strength repair of steel and cast parts, e.g. for repairing faulty machining on tool and machine parts (liquid metal).
Processing time: 4 to 6 min.
Handling strength: after 15 min.
Usage temperature range: -55 to +100 °C

Twin syringe, 25 ml

281.401 Instant adhesive LOCTITE® 401

Description:
Universal-use instant adhesive for bonding materials in applications where uniform stress distribution and high tensile and shearing strength are required. Achieves fast bonding with a variety of materials, e.g. metals, plastics and elastomers. Perfect for all quick repairs as well as small emergency repairs of all kinds.
Handling strength: after 3 - 10 sec.
Usage temperature range: -40 to +120 °C

Bottle, 50 g

281.454 Instant adhesive gel LOCTITE® 454

Description:
For joining materials that are difficult to bond and for applications where uniform stress distribution and high tensile and shearing strength are required. Achieves fast bonding with a variety of materials, including metals, plastics and elastomers. No dripping or draining - gel-like consistency ideal for vertical and overhead applications.
Handling strength: after 5 - 10 sec.
Usage temperature range: -40 to +120 °C

Tube, 20 g

Peripheral equipment

Press and tools products

Ball bearing inserts and rails

If you need fast and reliable tool changing, you will find that equipping or updating your press with ball bearing inserts and rails is the ideal solution.

With ball bearing inserts and rails you can move or change tools fast, and above all accurately - even if they weigh several tons. In the past this has often been an awkward, inconvenient and sometimes even critical process.

Equipping and retrofitting press tables with ball bearing rails is extremely straightforward as virtually every press table has fixing slots. The ball bearing rails are simply inserted and fixed in these slots.

Ball bearing inserts can be used for press tables which do not have fixing slots. These are fitted in the locating sockets.

The ball bearings of the inserts and rails will move in any direction and project only slightly above the surface of the press table. The result is that only slight force is required for movement on the table. When the tool is clamped in place it sits on the table and the clamping pressure causes the ball bearings to retract into their sockets.

Roller inserts and roller rails

Roller inserts and rails will carry twice the load of ball bearing inserts and rails and ensure precise linear movement of the tool. This linear technology requires precise positioning of the tool when it is transferred to the tool bench.

Roller rails are used especially on presses with stationary mounting devices.
The special roller bearing technology operates reliably at high temperatures (200 °C).

Unlike ball bearing rails, roller rails can be used in tool base plates, i.e. installed upside down.

Conveyor belts

Our conveyor belts are designed for use in a wide variety of production applications.

There is a belt width and length to suit almost every application.

The conveyor belts are powered by an electric motor, which is electronically regulated to provide belt speeds from 0.02 to 30 metres per minute.

The motor can be mounted horizontally or vertically, on either side of the belt for either direction of movement. Conveyor belts are available with or without profiles across the belt. Conveyor edge rails are also available in a range of designs.

Pneumatic conveyors

This pneumatic conveyor is unique and is patented. It was designed to provide an effective and affordable solution to the problems of conveying parts and disposing of waste.

This beltless system conveys stampings and waste from the tool area by vibration alone.

Electro-mechanical transporters

The FIBRO electro-mechanical transporters have been developed to effectively and inexpensively solve the problems of transporting parts and the removal of stamping and cutting residues from presses.

The principle behind the electro-mechanical transporter is the so-called „table cloth effect“. The slow acceleration during the forward stroke pushes the parts or offcuts forwards. The fast return stroke of the guiding system results in a transport movement in only one direction.

further information on request

Electronic Thread Moulding

The electronic thread moulding unit, specially designed for punching and forming processes, stands out thanks to its excellent process integration. Regardless of whether the electronic thread moulding unit is used in progressive dies or progression tools, in presses or in automatic punching and bending machines, the desired threads are created in a reliable and controlled fashion. This improves thread quality, increases reliability and ensures quick, cost-effective production.

Flexibility

The electronic thread moulding unit can be used in a wide variety of presses, progressive dies and automatic punching machines thanks to its independent drive and versatile control unit. If required, a thread cutter can also be operated instead of the non-cutting thread moulder. The compact design allows for the greatest possible flexibility.
Integration takes place through installation in existing equipment. The control unit of the electronic thread moulding unit is coupled with the equipment according to requirements. The simple programming facilitates quick calibration of all parameters.

Quality

The thread moulding unit produces high quality threads in sizes M2-M24. The threads stand out thanks to:

- great strength and stability
- high surface quality

The quality test includes an ongoing check of the thread moulding cycle. The condition of the thread tool, the tolerance of the core hole and the quality of the resulting thread are inferred from the monitored parameters. If limit values are fallen short of or are exceeded, a stop signal is sent to the press or equipment and a corresponding error message is produced. Furthermore, all data sets can be read out from the controls and summarised externally as a report, for instance within a quality assurance system.

Cost effectiveness

In addition to producing high quality threads, the thread creation is above all extremely cost effective. Cost savings can be achieved through:

- long service life of the tools
- faster processing times
- avoiding rejects
- eliminating the feeding of parts and additional production stages
- a high level of investment security

At a glance

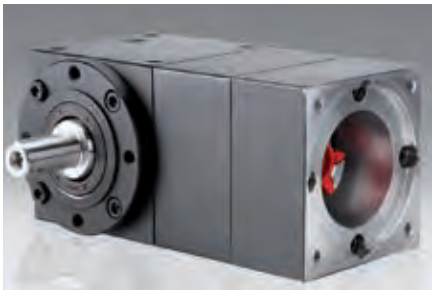
- Versatile and flexible application
- Autonomous system
- Large spectrum of thread sizes M2-M24 (larger upon request)
- Simple programming and control
- High quality
- Stability and strength
- Surface quality
- Integrated quality control
- Cost effective
- Cost savings
- Short production times
- A high level of investment security

Sample applications

Electronic Thread Moulding

The controls and the servo regulator for the drives are located in the control box. The size of the control box varies according to the number of systems that must be controlled. The control unit can regulate up to 6 independent drives. 10 pr ogrammes per unit allow unrestricted programming of the parameters (rotation speed of the leader, limitation of the torque, number of rotations of the leader, cycle time, batch counter, process data monitoring). Data storage may also take place, which serves to record all the torque values.

The moulding head transforms horizontal rotation into vertical rotation. The feed motion is carried out by a leader. The thread pitch of the leader corresponds to the pitch of the thread to be moulded. The moulding tool is operated with maximum precision with the help of the head spindle sleeve. A clamping sleeve is used to clamp the thread moulder.



The bevel gear serves to limit the length of the installation space required by the drive. Using the bevel gear is optional.

A flexible and compact micro dosing unit with a volumetric dosing pump allows for precise and reliable lubrication. The nozzle technology was developed for punching and forming processes.

The drive shaft transfers the drive's torque to the moulding head. By evening out differences in height and length, the moulding head can be installed in every position within the tool. It is also manoeuvrable on holding-down plates. The maximum clearance between the drive and the moulding head is 500 mm.

The drive consists of one synchronous servomotor for each moulding head that must be powered. The servomotor is configured according to the thread size. This makes it possible to create different thread sizes in a tool using one control. Thanks to the constant cutting speed, significantly longer service lives are achieved than is the case with mechanical, forced piloted systems.
The drive is independent from the press stroke and press motion. The maximum rotation speed is 6000 U/min.

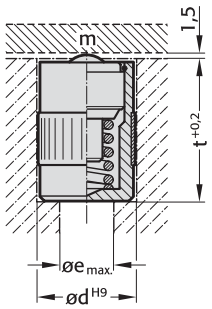
Ball bearing insert without collar
Ball bearing insert with collar

2198.32.



Note:

The supporting ball bearings raise the object to be moved (tool) away from the table surface and replace the surface friction with rolling friction. This significantly reduces the force required to move the tool.

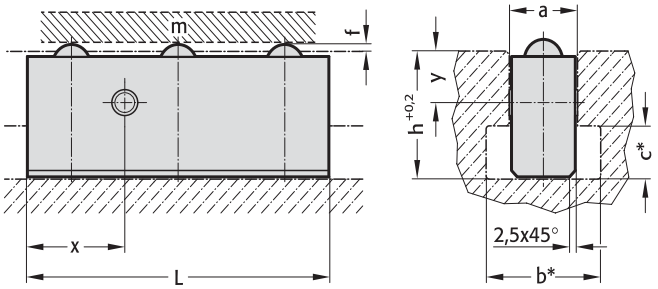
Ball bearing rail

2198.42.



Note:

The ball bearing rails are pushed into the DIN 650 T-shaped grooves in the press table and are fixed in place by the clamping piece. The size and number of the ball bearing rails is determined by the size of the T-shaped groove and the load-bearing capacity required. Once the tool is clamped in place, it lies on the press table and the clamping pressure presses the ball bearings into the holes.

* T-shaped grooves are not absolutely necessary.

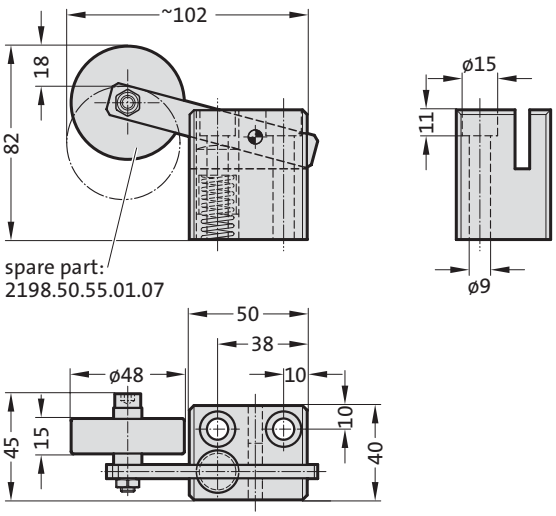
Spring mounted roller to VW Standard

2198.50.55.01 Execution 1

Material: Steel



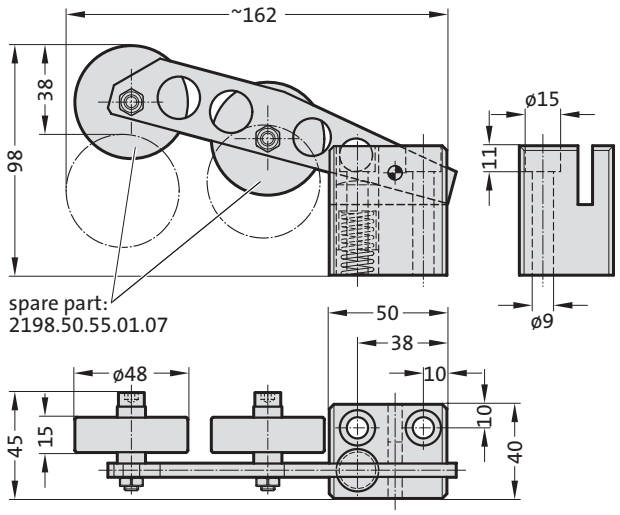
Note:
Screws are not included.

Application:
For stabilizing the sheet-metal strip in the tool and at the coil entry.

Fixing:
Use socket cap screws DIN EN ISO 4762 M8.

2198.50.55.02 Execution 2

Material: Steel



Note:
Screws are not included.

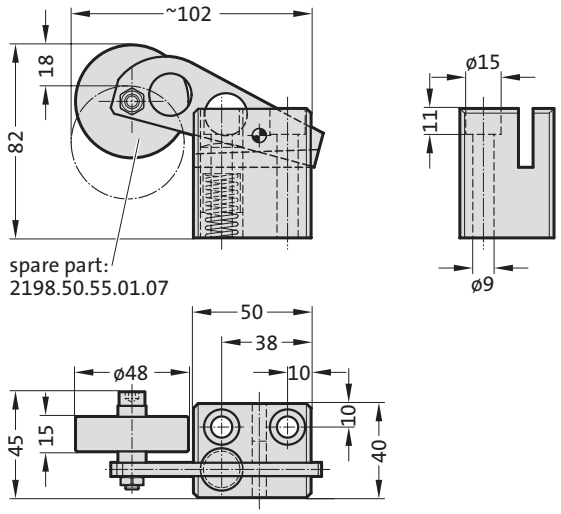
Application:
For stabilizing the sheet-metal strip in the tool and at the coil entry.

Fixing:
Use socket cap screws DIN EN ISO 4762 M8.

Spring mounted roller to VW Standard

2198.50.55.03 Execution 3

Material: Steel



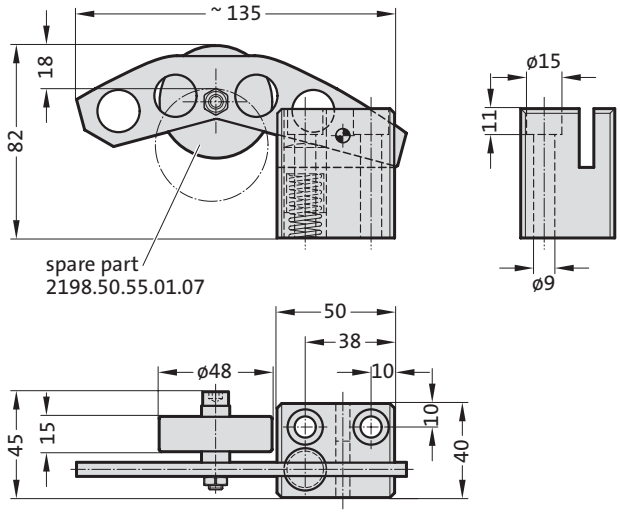
Note:
Screws are not included.

Application:
For stabilizing the sheet-metal strip in the tool and at the coil entry.

Fixing:
Use socket cap screws DIN EN ISO 4762 M8.

2198.50.55.04 Execution 4

Material: Steel



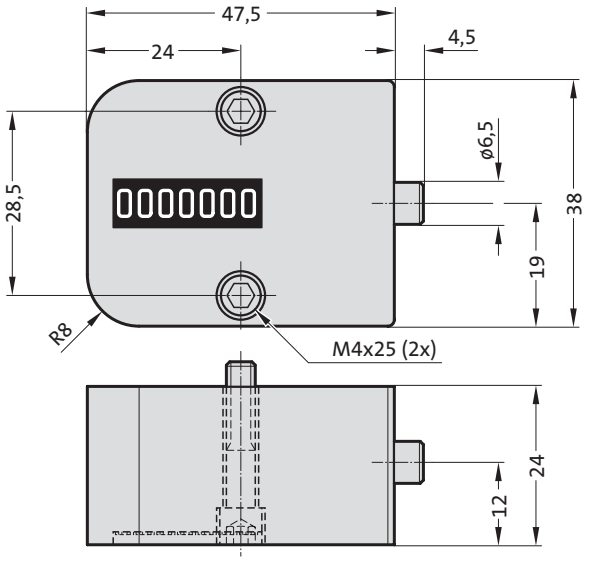
Note:
Screws are not included.

Application:
For stabilizing the sheet-metal strip in the tool and at the coil entry.

Fixing:
Use socket cap screws DIN EN ISO 4762 M8.

Counter view, mechanical

3710.12.01



Description:

- monitors the productivity of a moulding tool

Note:

- max. operational temperature 120 °C
- seven digit display, non-resettable, allows recording up to 10 million cycles
- splash resistant, corrosion resistant
- incl. mounting screws M4x25

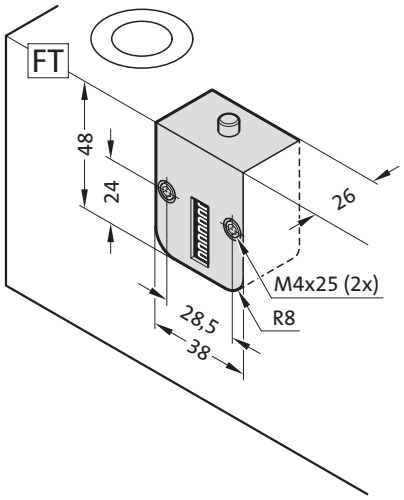
Installation into mould parting surface with 2 cylinder screws M4 x 25 DIN EN ISO 4762.

- An installation in the mould parting surface provides a good reading of the counted values.

Patent

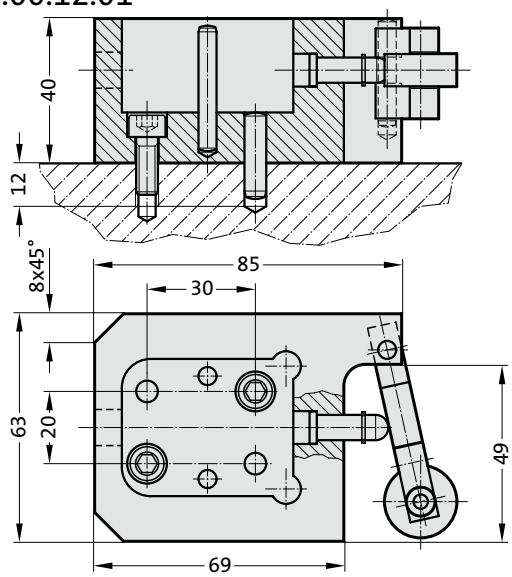
3710.12.01 Counter view, mechanical

Mounting example



Installation frame for counter view

3710.00.12.01



3710.00.12.01 Installation frame for counter view

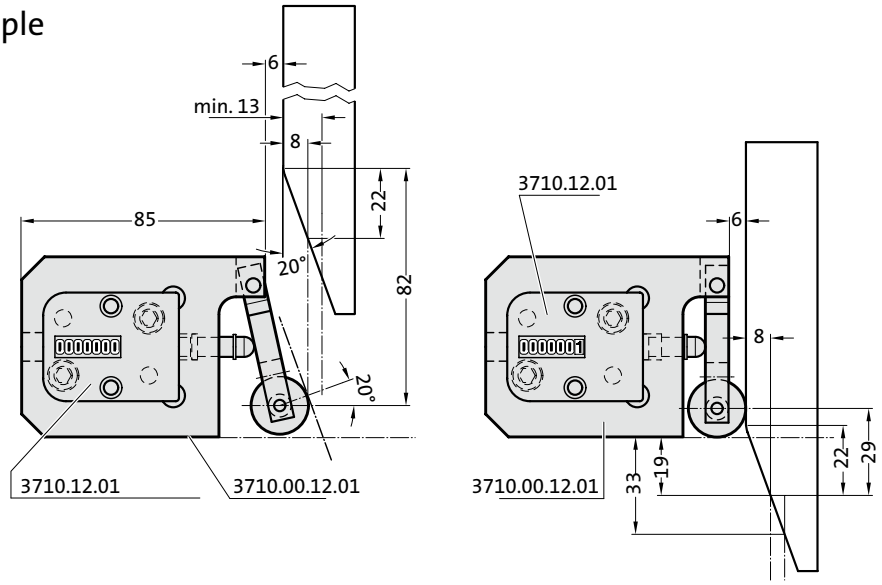
Note:

Fasten the installation frame on the tool, then insert the counter view.
Delivery includes:
2 socket head cap screws M6x16 to DIN EN ISO 4762 and 2 dowel pins 2361.1.0600.024

Attention:

After installing the counter view into the installation frame, disassembly is no longer possible (manipulation proof).

Mounting example



Electrically controlled Conveyor Belts

Motor position with gearbox:

Motor axis horizontal relative to direction of belt travel, right	Code	1
Motor axis horizontal relative to direction of belt travel, left	Code	2
Motor axis vertical relative to direction of belt travel, right, above	Code	3
Motor axis vertical relative to direction of belt travel, right, below	Code	4
Motor axis vertical relative to direction of belt travel, left, above	Code	5
Motor axis vertical relative to direction of belt travel, left, below	Code	6

Controller:

Excluding electrical installation	Code	0
With manual ON/OFF switch and motor circuit-breaker	Code	1
With manual ON/OFF switch and motor circuit-breaker, additional emergency stop switch and 3 m cable with IEC 309 plug connector.	Code	2
Fittings as for 2 + Motor frequency controller to regulate the belt speed, 230 V AC, single phased, with IEC 309 plug connector.	Code	3
Fittings as for 2 + Motor frequency controller to regulate the belt speed, 400 V AC, three phased, with IEC 309 plug connector.	Code	4

Description:

The conveyor belts are used to move parts and waste out of the press. They are suitable for any other application involving the movement of parts or waste.

The belt consists of a woven glass fibre fabric with a polyurethane coating.

The drives are designed for both continuous and intermittent operation.

Accessories:

Delimiting guides, loss prevention and stands (see following pages) only in conjunction with a conveyor belt order.

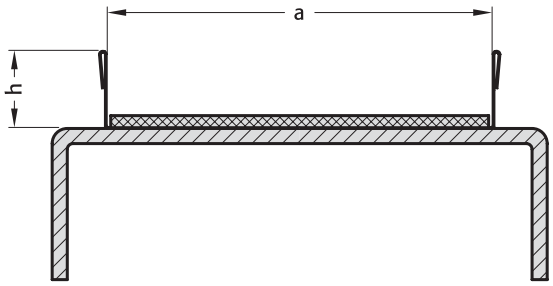
Delimiting guide for conveyor belt

2195.114.



Note:

Only in conjunction with a conveyor belt order.

Delimiting guide for conveyor belt

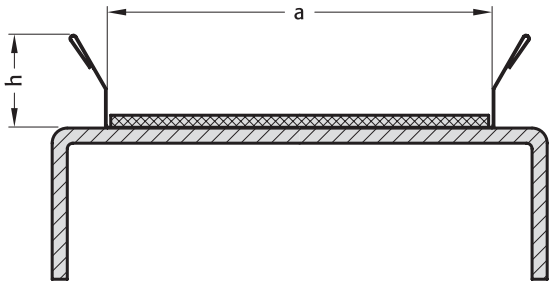
Description:

Delimiting guide made of stainless steel
h = 15 - 100 mm (in 5 mm increments)

Ordering Code (example):

Conveyor belt		=	2195.
Delimiting guide type		=	114.
Guide height	h = 15 mm	=	015.
Belt width	a = 100 mm	=	100.
Frame length	b = 1500 mm	=	1500
Order No		=	2195.114.015.100.1500

2195.115.



Note:

Only in conjunction with a conveyor belt order.

Delimiting guide for conveyor belt

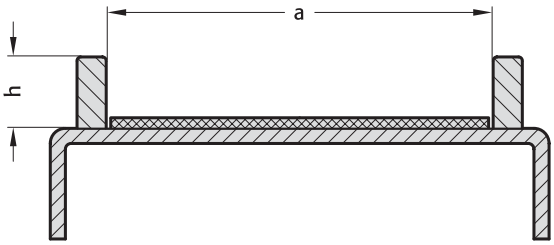
Description:

Delimiting guide made of stainless steel
h = 25 - 100 mm (in 5 mm increments)

Ordering Code (example):

Conveyor belt		=	2195.
Delimiting guide type		=	115.
Guide height	h = 25 mm	=	025.
Belt width	a = 150 mm	=	150.
Frame length	b = 1500 mm	=	1500
Order No		=	2195.115.025.150.1500

2195.116.



Note:

Only in conjunction with a conveyor belt order.

Delimiting guide for conveyor belt

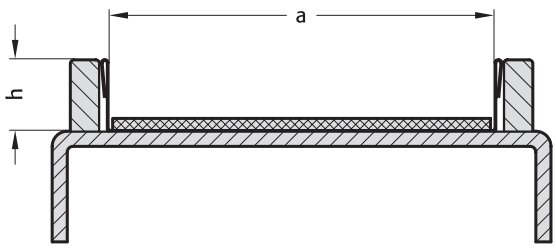
Description:

Conveyor edge rails of steel, brazed
h = 10 - 100 mm (in 5 mm increments)

Ordering Code (example):

Conveyor belt		=	2195.
Delimiting guide type		=	116.
Guide height	h = 10 mm	=	010.
Belt width	a = 100 mm	=	100.
Frame length	b = 1500 mm	=	1500
Order No		=	2195.116.010.100.1500

2195.117.



Note:

Only in conjunction with a conveyor belt order.

Delimiting guide for conveyor belt

Description:

Trough conveyor edge rails of stainless steel,
with brazed on steel reinforcement walls
h = 15 - 100 mm (in 5 mm increments)

Ordering Code (example):

Conveyor belt		=	2195.
Delimiting guide type		=	117.
Guide height	h = 15 mm	=	015.
Belt width	a = 100 mm	=	100.
Frame length	b = 1500 mm	=	1500
Order No		=	2195.117.015.100.1500

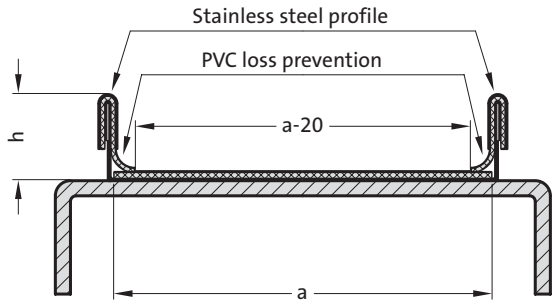
Delimiting guide for conveyor belt with loss prevention

Delimiting guide for conveyor belt with loss prevention

2195.218.

Installation example:

with profile on conveyor edge rail 2195.114.
with loss prevention.
h = 25 - 50 mm (in 5 mm increments)



Ordering Code (example):

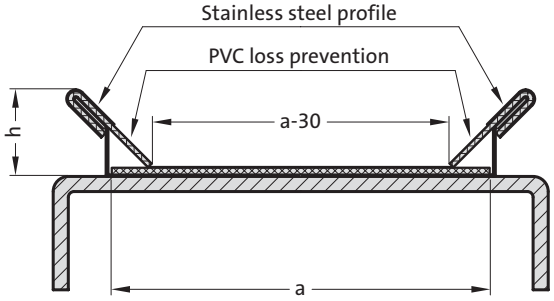
Conveyor belt		= 2195.	
Delimiting guide type 114 with loss prevention type 218		=	218.
Guide height	h = 25 mm	=	025.
Belt width	a = 150 mm	=	150.
Frame length	b = 1500 mm	=	1500
Order No		= 2195.	218.025.150.1500

Delimiting guide for conveyor belts with loss prevention

2195.219.

Installation example:

with profile on conveyor edge rail 2195.115.
with loss prevention.
h = 25 - 50 mm (in 5 mm increments)



Ordering Code (example):

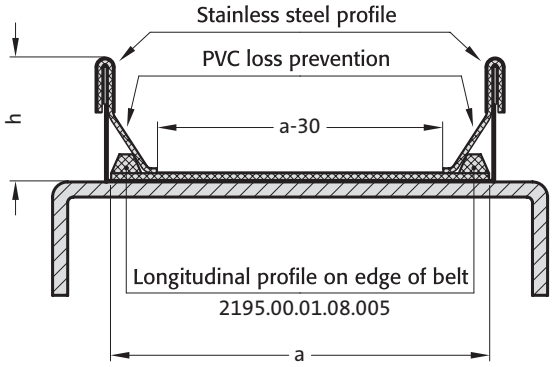
Conveyor belt		= 2195.	
Delimiting guide type 115 with loss prevention type 219		=	219.
Guide height	h = 25 mm	=	025.
Belt width	a = 150 mm	=	150.
Frame length	b = 1500 mm	=	1500
Order No		= 2195.	219.025.150.1500

Delimiting guide for conveyor belt with loss prevention

2195.220.

Installation example:

with profile on conveyor edge rail 2195.114.
and longitudinal profile on edge of belt, with loss prevention.
h = 35 - 50 mm (in 5 mm increments)



Ordering Code (example):

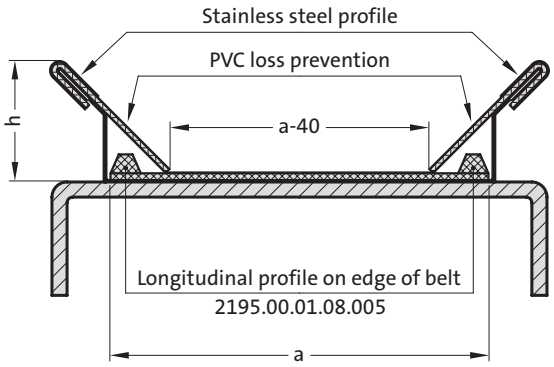
Conveyor belt		= 2195.	
Delimiting guide type 114 with loss prevention and longitudinal profile 2195.00.01.08.005		=	220.
Guide height	h = 35 mm	=	035.
Belt width	a = 150 mm	=	150.
Frame length	b = 1500 mm	=	1500
Order No		= 2195.	220.035.150.1500

Delimiting guide for conveyor belt with loss prevention

2195.221.

Installation example:

with profile on conveyor edge rail 2195.115.
and longitudinal profile on edge of belt, with loss prevention.
h = 35 - 50 mm (in 5 mm increments)



Ordering Code (example):

Conveyor belt		= 2195.	
Delimiting guide type 115 with loss prevention and longitudinal profile 2195.00.01.08.005		=	221.
Guide height	h = 35 mm	=	035.
Belt width	a = 150 mm	=	150.
Frame length	b = 1500 mm	=	1500
Order No		= 2195.	221.035.150.1500

Stand for conveyor belt

Description:

Stand, tilting with adjustable feet .120.
Stand, tilting with adjustable castors .121.

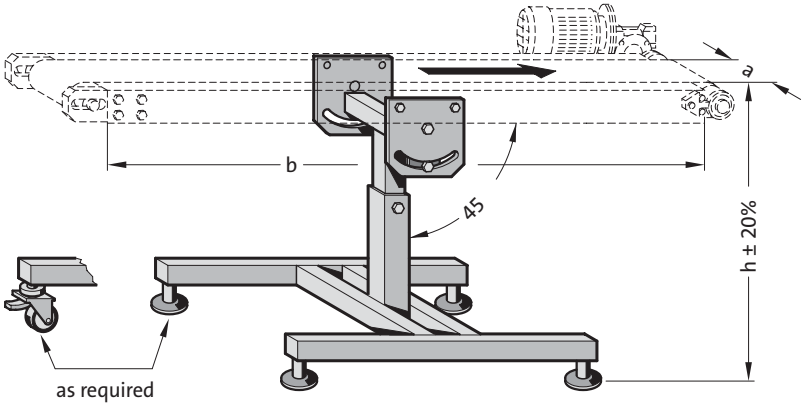
h = height to customer's requirements, min. 450 mm
±20% h = adjustable height range

$a_{max.}$ = 350 mm
$b_{max.}$ = 2000 mm

Ordering Code (example):

Conveyor belt		= 2195.
Stand with adjustable feet		= 120.
Height	h = 450 mm	= 0450.
Belt width	a = 350 mm	= 350
Order no		= 2195.120.0450.350

2195.120./2195.121.



Description:

Table format with adjustable feet .130.
Table format with adjustable castors .131.

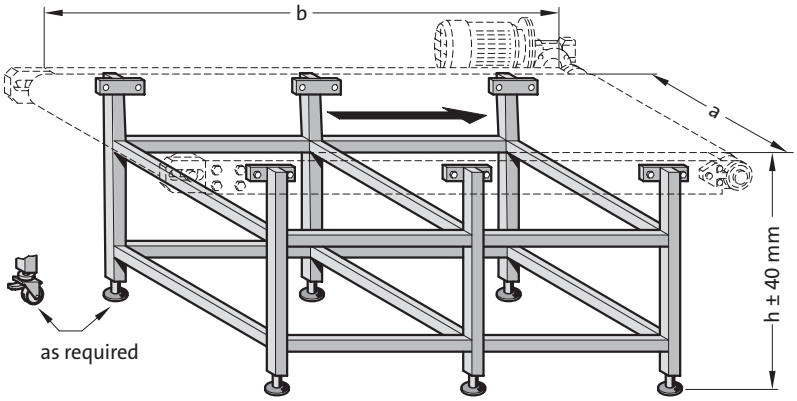
h = height to customer's requirements, min. 450 mm

For use with beltwidths a
For use with frame length b

Ordering Code (example):

Conveyor belt		= 2195.
Stand with adjustable castors		= 131.
Height	h = 600 mm	= 0600.
Belt width	a = 350 mm	= 350.
Nominal belt length	b = 1000 mm	= 1000
Order no		= 2195.131.0600.350.1000

2195.130./2195.131.



Description:

Stand, with adjustable feet .140.
Stand, with adjustable castors .141.

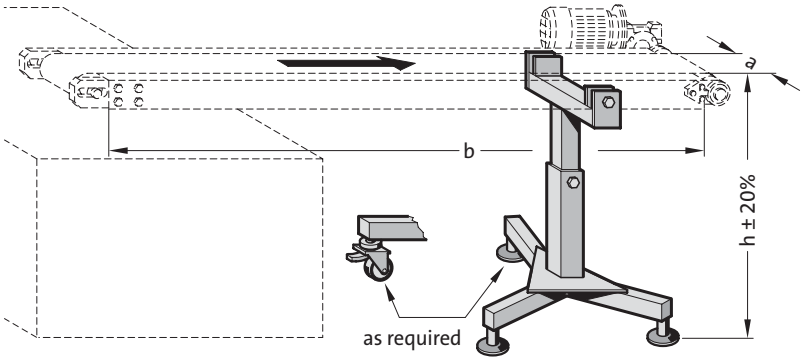
h = height to customer's requirements, min. 450 mm
±20% h = adjustable height range

$a_{max.}$ = 350 mm

Ordering Code (example):

Conveyor belt		= 2195.
Stand with adjustable castors		= 141.
Height	h = 450 mm	= 0450.
Belt width	a = 350 mm	= 350
Order no		= 2195.141.0450.350

2195.140./2195.141.



Description:

double adjustment with adjustable feet .150.
double adjustment with adjustable castors .151.

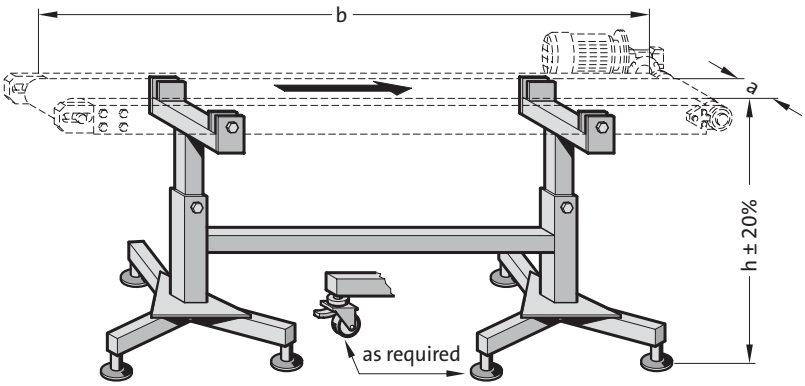
h = height to customer's requirements, min. 450 mm
±20% h = adjustable height range

$a_{max.}$ = 400 mm
$b_{max.}$ = 3000 mm

Ordering Code (example):

Conveyor belt		= 2195.
Stand with adjustable castors		= 151.
Height	h = 450 mm	= 0450.
Belt width	a = 400 mm	= 400.
Nominal belt length	b = 3000 mm	= 3000
Order no		= 2195.151.0450.400.3000

2195.150./2195.151.



Pneumatic Conveyors

Pneumatic conveyor

Description:

This pneumatic conveyor is unique and is patented. It was designed to provide an effective and affordable solution to the problems of conveying parts and disposing of waste. This beltless system conveys stampings and waste from the tool area by vibration alone.

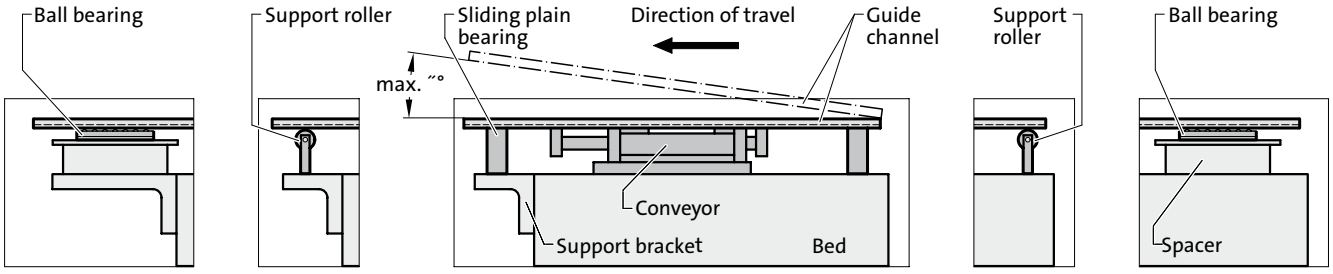
A specially designed guide channel which is screwed to the body of the conveyor vibrates rhythmically slowly forwards and fast backwards. The mass inertia of the parts is used to move them forwards. In this way the parts in the guide channel progress gently towards the storage containers.

The conveyor is maintenance-free and has a very low air consumption so is extremely economical in operation.
The pneumatic conveyor is quiet running and very user friendly.

The conveyor was originally designed for press room use but can be used as a conveyor with any tool. Blockages are a thing of the past whether the conveyor is feeding parts for assembly or removing and disposing of stampings and waste parts.

Guides

We recommend three options for supporting a long guide channel:
˜) Ball bearings °) R oller supports ˛) Sliding plain bearings



Technical data:

Model	Max. load [kg]	air consumption [l/min.]	sound level [db-A]	Stroke length [mm]	Guide channel weight max. [kg]	Despatch weight [kg]
2199.03	3	0,55	68	20	1,4	1,4
2199.10	10	1,25	68	25	2,7	2,8
2199.40.1	40	5,42	70	27	5,4	7,2
2199.70	70	5,42	70	27	11,3	5,5

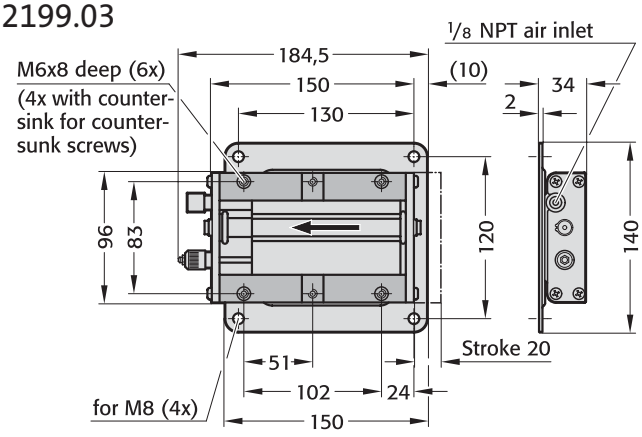
Recommended number of strokes: 120 /min.
Speed of travel: 8 - 10 m/min.
Operating pressure: 4 - 5.5 bar

Note:

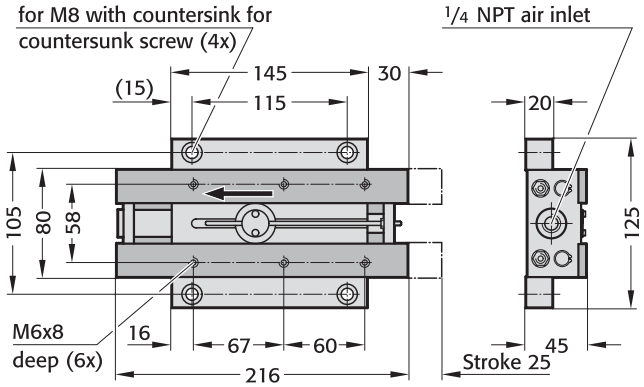
Do not exceed 5.5 bar as excess pressure will damage the transporter.
Additional protection for the transporter can be provided by including a service unit in the circuit. This consists of a filter, pressure control valve and lubricator.

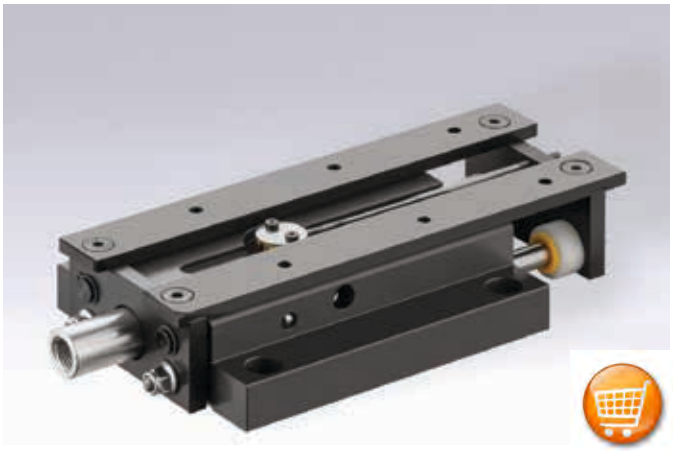
Pneumatic conveyor

2199.03

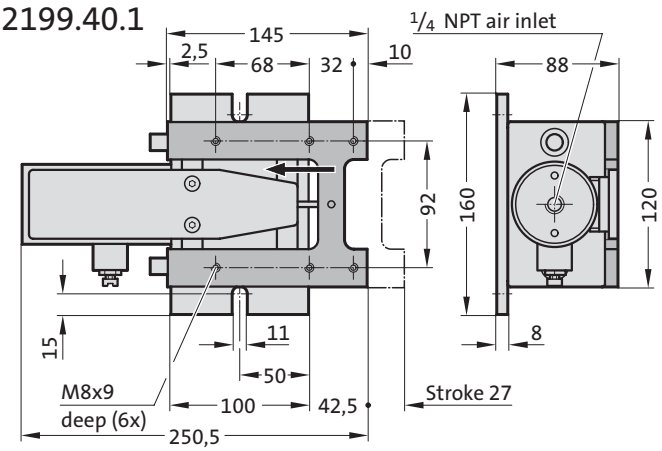


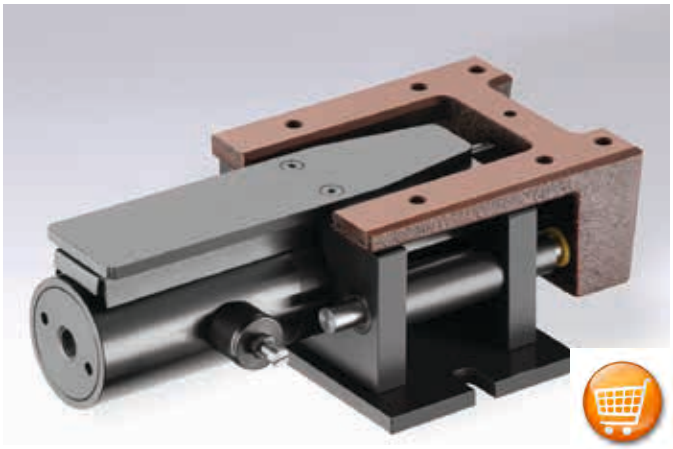
2199.10



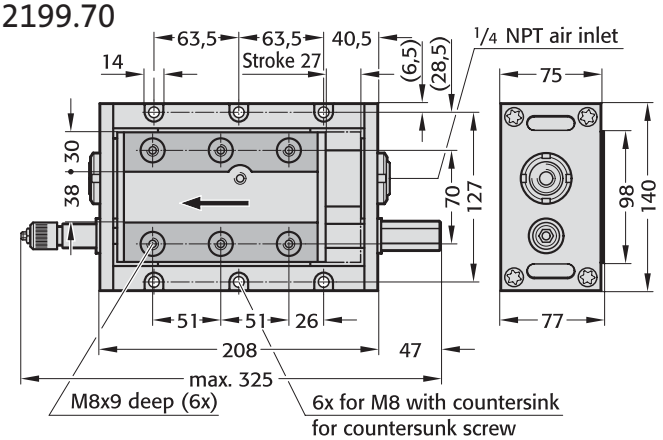


2199.40.1





2199.70



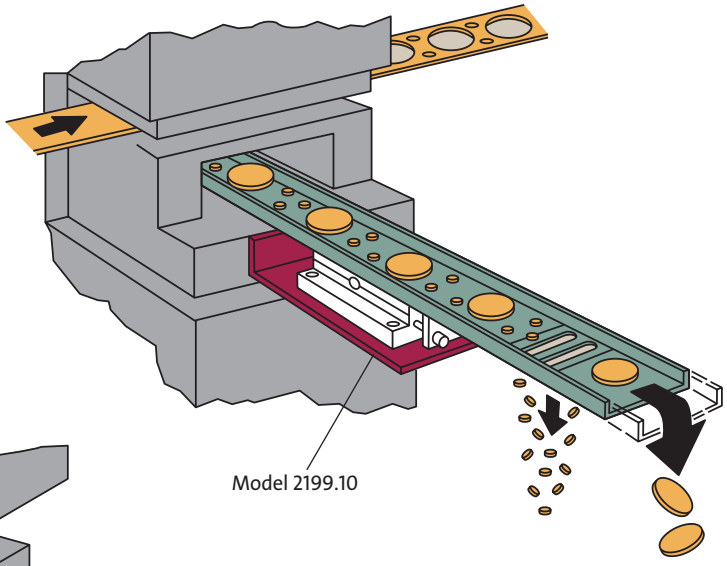
Pneumatic conveyors

2199.03/.10/.40/.70

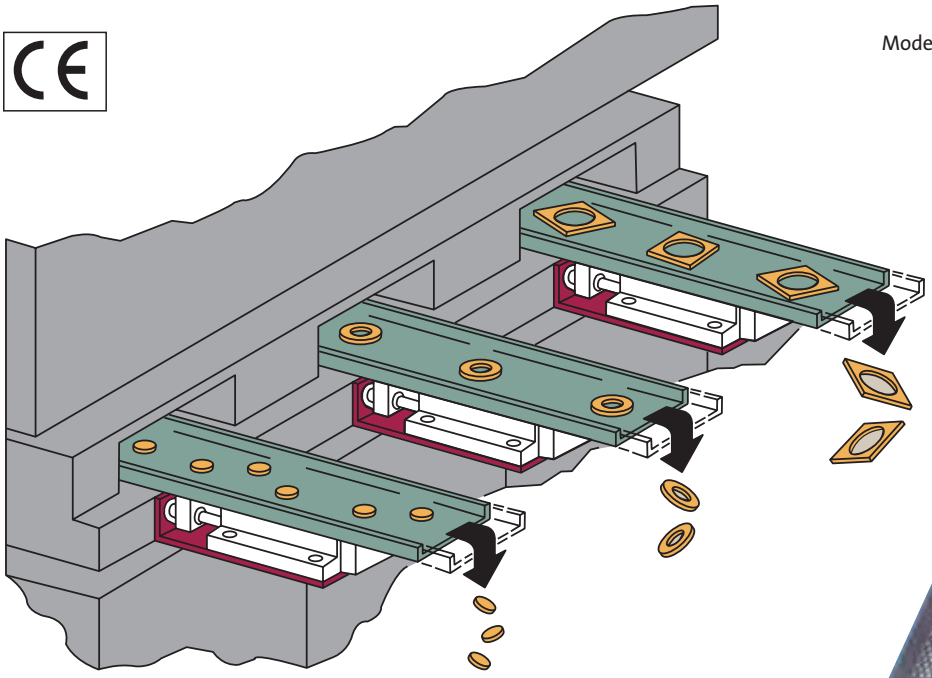
How does the pneumatic conveyor work?

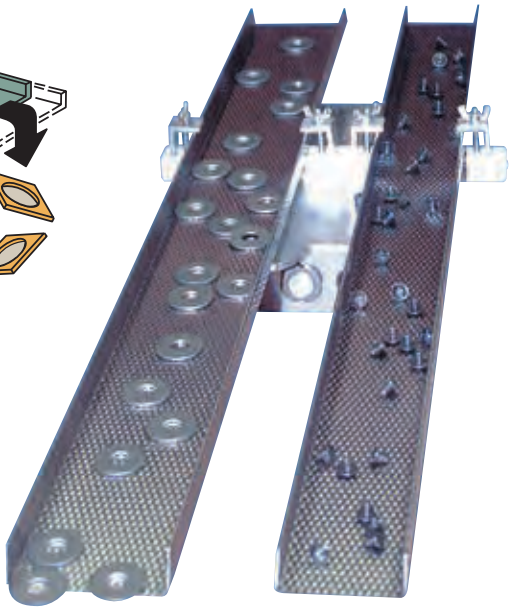
This compact pneumatic conveyor is driven by compressed air. The vibrating rhythmic motion conveys stampings and stamping waste whilst reducing your costs.

Guide channels can be matched to any tool opening and used for sorting various types of waste.

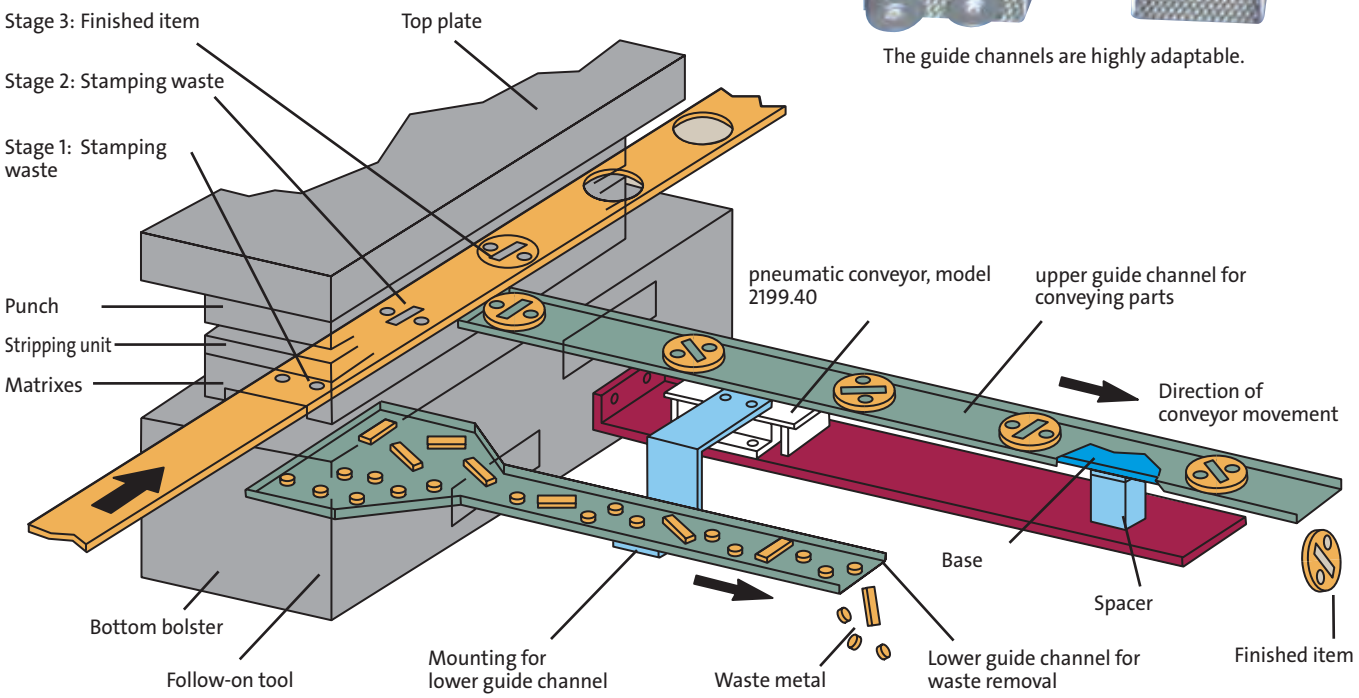


Model 2199.10





The guide channels are highly adaptable.



Electro-mechanical transporters

Electro-mechanical transporters
General Information

The FIBRO electro-mechanical transporters have been developed to effectively and inexpensively solve the problems of transporting parts and the removal of stamping and cutting residues from presses.

The principle behind the electro-mechanical transporter is the so-called „table cloth effect“. The slow acceleration during the forward stroke pushes the parts or offcuts forwards. The fast return stroke of the guiding system results in a transport movement in only one direction.

Due to its compact design, the FIBRO electro-mechanical transporter is also suitable for applications where only limited space is available. The simple, sturdy and flexible design provides a safe, reliable, efficient and a cost efficient solution.

Basic advantages:

- compact design
- low maintenance
- low noise level (< 70 dB)

Designs:

2299.001 vertical gear position
2299.002 horizontal gear position
2299.011 vertical gear position, with profile and support
2299.012 horizontal gear position with profile and support
2299.121 vertical gear position, with two slides, profile and support
2299.122 horizontal gear position with two slides, profile and support
2299.221 vertical centre gear position, two slides, with profile and support
2299.222 horizontal centre gear position, two slides, with profile and support

Scope of delivery:

The transporters are supplied without connection cable.

Design data (CAD):

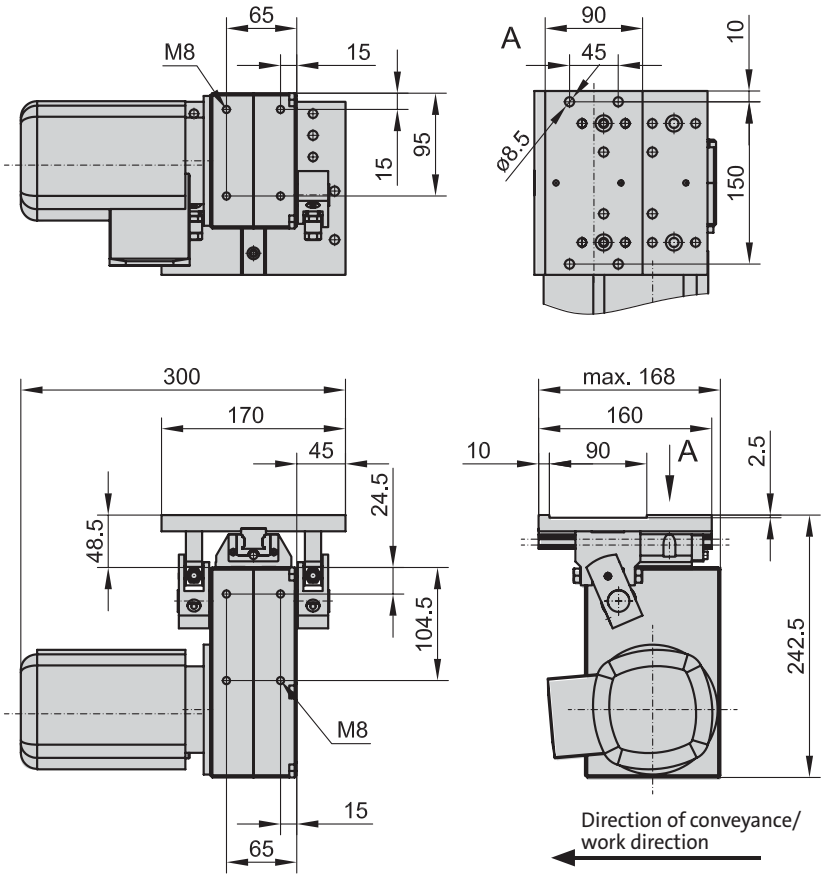
2D + 3D CAD data for various CAD systems as well as system-neutral interfaces are available on the internet at:
http://fibro.partserver.de

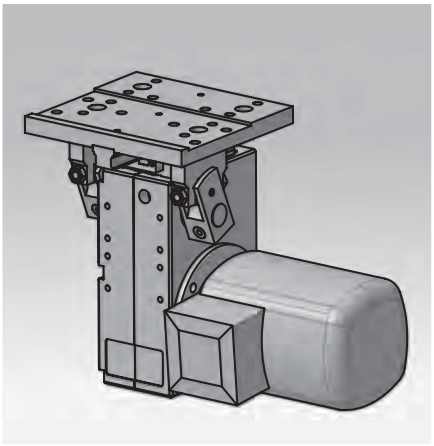
Technical data:

Drive:	Alternating current (3 phases) 1375 min -1 0.09 kW rated capacity 0.51 A nominal curr ent at 400 V Weight 4.4 kg Protection class IP55 (DI N EN 60529)
Delivery stroke:	20 mm
Conveying speed:	approx. 4.5m/min
Stroke frequency:	4 strokes/second
max. guiding system weight (incl. profile):	35 kg
max. bulk weight (guiding system weight, profile, transport items):	100 kg
Temperature range (permissible ambient temperature):	-20 to +60 °C

Electro-mechanical transporter
vertical gear position
horizontal gear position

2299.001 vertical gear position

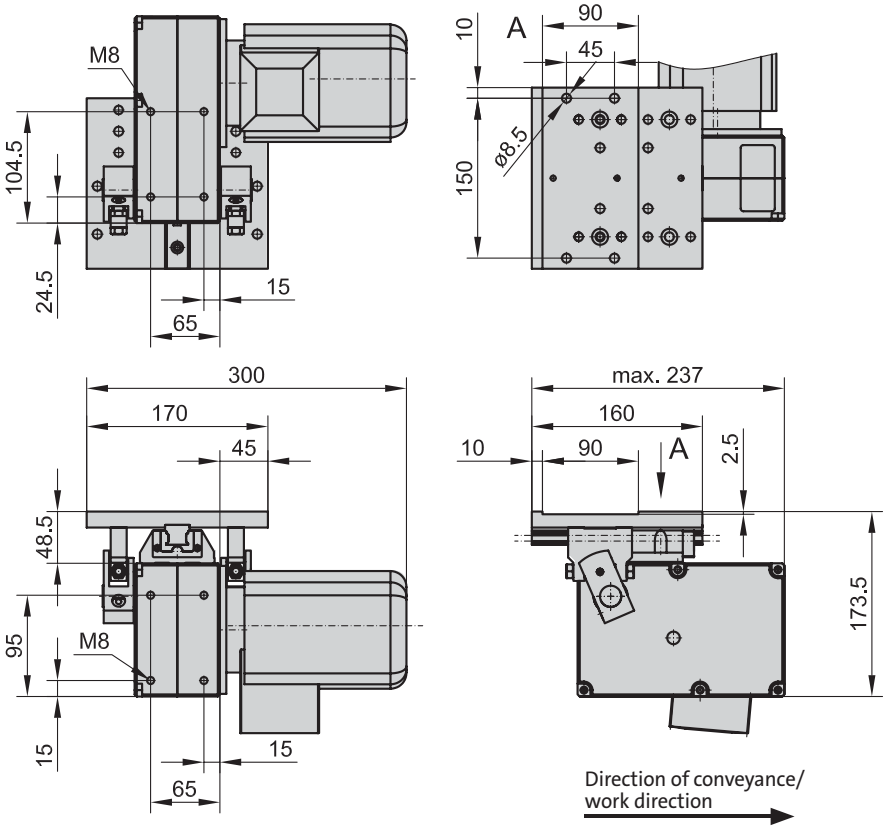


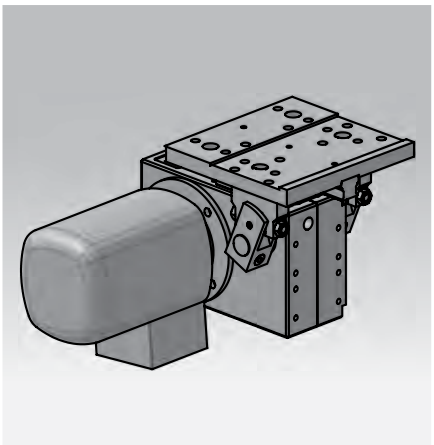


Note:

The transporter can be attached at two levels.

2299.002 horizontal gear position





Note:

The transporter can be attached at two levels.

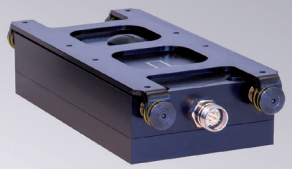
CLEAN LINE

ELECTRIC TRANSPORTER

2299.60. Transporter, BLACK LINE



2299.60. Control unit, BLACK LINE

2299.61. Transporter, CLEAN LINE

2299.61. Transporter, CLEAN LINE

Description:

The electrically driven and patented transporter has been constructed to provide effective and affordable solutions to problems in parts transport, waste disposal as well as parts sorting. This system conveys punched and waste parts out of the tooling area with a rhythmic movement in a straight line.
A specially designed guide channel which is screwed to the body of the conveyor vibrates rhythmically slowly forwards and fast backwards. The mass inertia of the parts is used to move them forwards. In this way the parts in the guide channel progress gently towards the storage containers.

Low energy consumption, infinitely variable speed control, simple automation, low noise (60 dB) and the absence of compressed air ensure high economic efficiency whilst improving the working environment.

Its main areas of application are conveying and separating solid materials in metal processing and the automotive sector. The additional "CLEAN LINE" product range can also be used in the food and pharmaceutical industries.

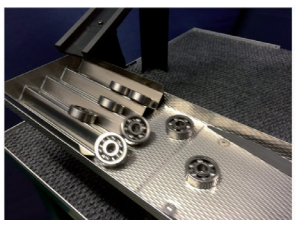
The electric transporter is always operated with the corresponding 2299.6X. control unit. Integration with the PLC on the power press or production machine allows the programming of the transport time or shutdown of the press in the event of faults.

Removal waste

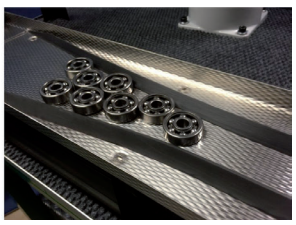
Simple automation

Infeed

Separation



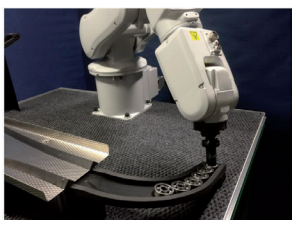
Organising



Positioning

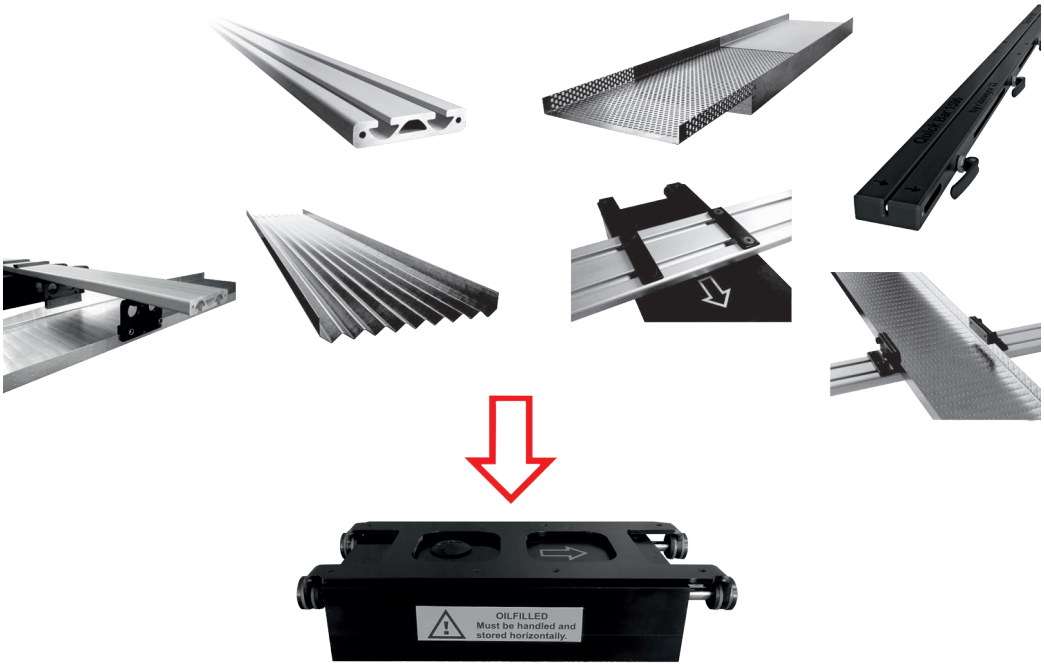
Storage

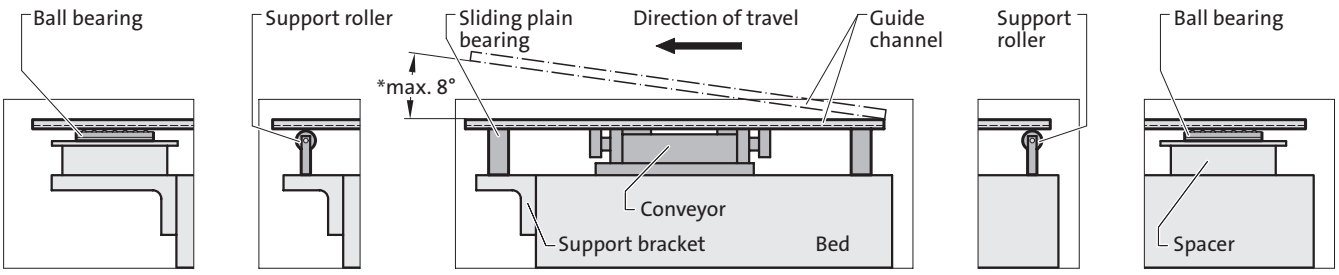
Picking



ELECTRIC TRANSPORTER

Mounting examples:

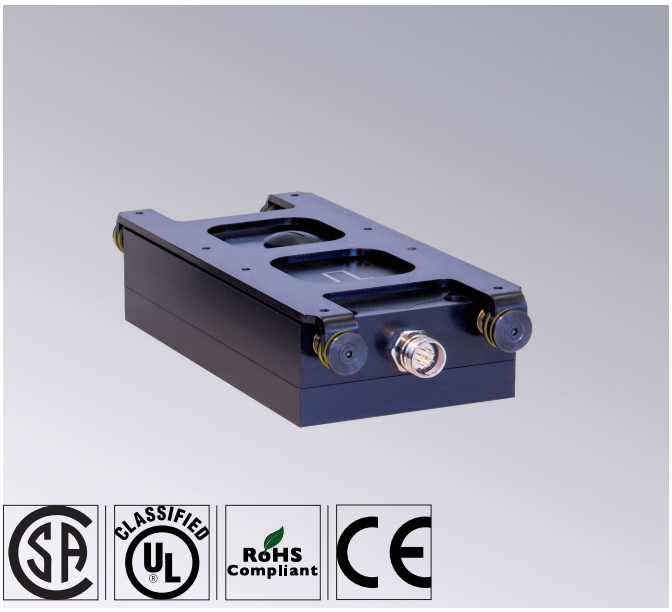




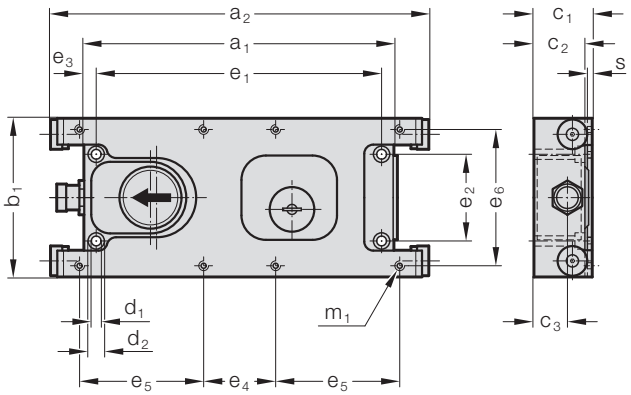
We recommend three options for supporting a long guide channel: 1) Ball bearings 2) Roller supports 3) Sliding plain bearings

*A chute incline can reduce the conveyor speed by up to 50%.

ELECTRIC TRANSPORTER, BLACK LINE



2299.60.1□100.



Description:

The electric transporter simplifies automation, increases energy efficiency and reduces noise pollution. The speed can be adjusted mechanically and, depending on the task type, the transporter conveys, sorts or separates electrically.
Used predominantly in metal processing and the automotive industry.

Material:

High-strength steel and anodised aluminium

Note:

Order numbers for BLACK LINE electric transporter **with** control unit, 230 V

2299.60.18100.01 MINI
2299.60.14100.01 COMPACT
2299.60.12100.01 MAX

Replacement **without** control unit:
2299.60.18100.00 MINI
2299.60.14100.00 COMPACT
2299.60.12100.00 MAX

The connection cable, control unit transporter and optionally the signal cable, control unit press are to be ordered separately.
For more information on the electrical connections, control unit and channel fastening, see Accessories.

Socket head bolts DIN EN ISO 4762 for fastening the transporter are included in delivery.

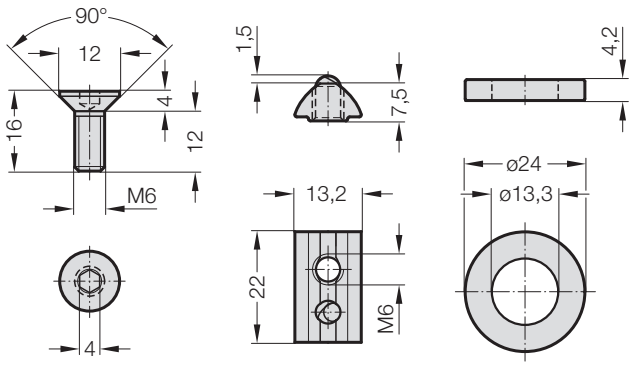
2299.69.10.20



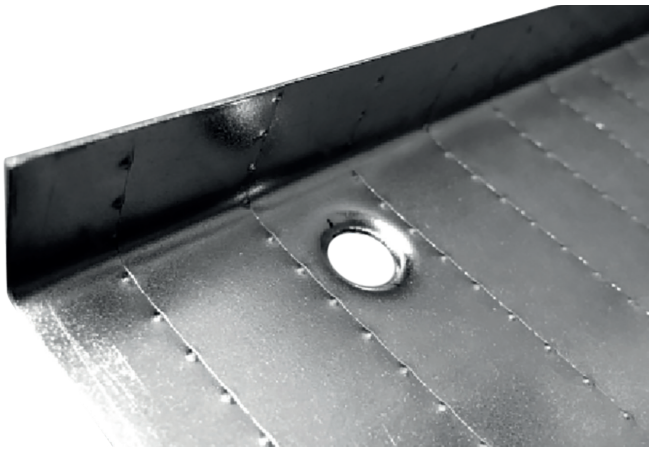
Description:
The channel fastening, incl. slot stone, is a mounting kit for fastening the channel on the profiled beam. It consists of four slot stones, four countersunk screws and four washers, self-adhesive, which allows continuous adjustment of the channel on the profiled beam after mounting.

Material:
Steel, zinc-plated

Note:
2299.69.10.20 use only for electric transporter, BLACK LINE 2299.60.12100. and 2299.60.14100.

2299.69.10.20 Channel fastening, standard, including slot stone

ELECTRIC TRANSPORTER - ACCESSORIES
MOUNTING TOOL



2299.69.10.00.01. **Mounting tool**

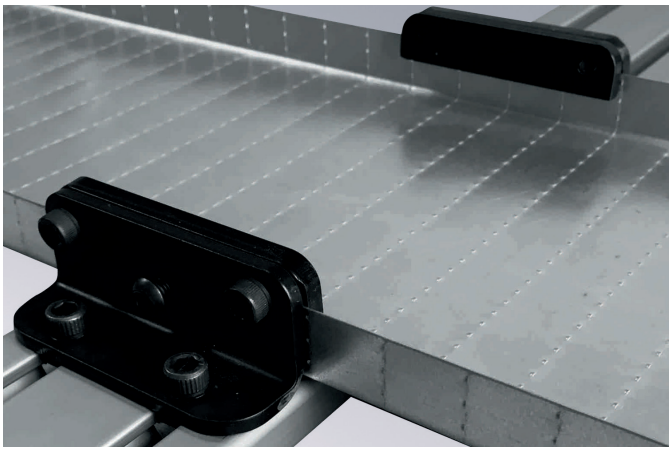
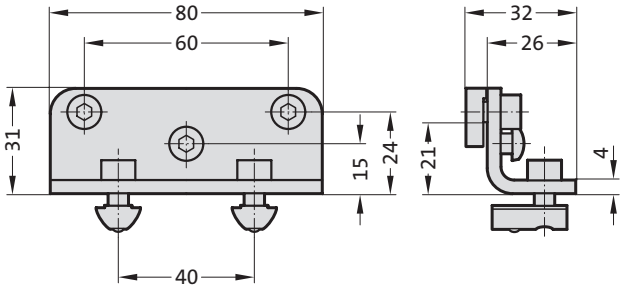
ELECTRIC TRANSPORTER - ACCESSORIES
CHANNEL FASTENING, TOPMOUNT
CHANNEL FASTENING, UNDERMOUNT



2299.69.10.30

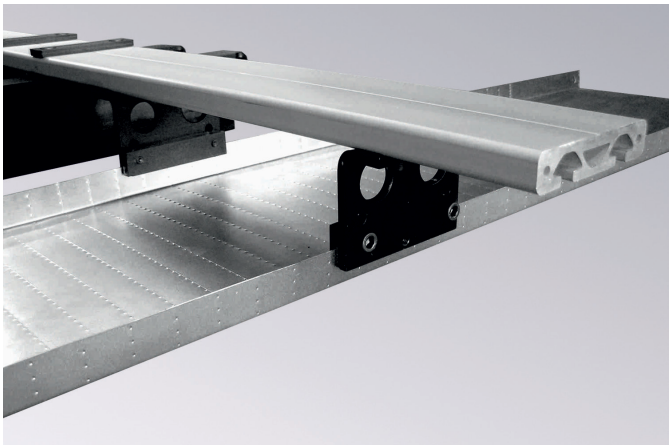


Description:
The topmount channel fastening, with its simple clamping principle, allows flexible mounting of the channel (without additional processing) on the top of the 2299.69.20.80 profiled beam.

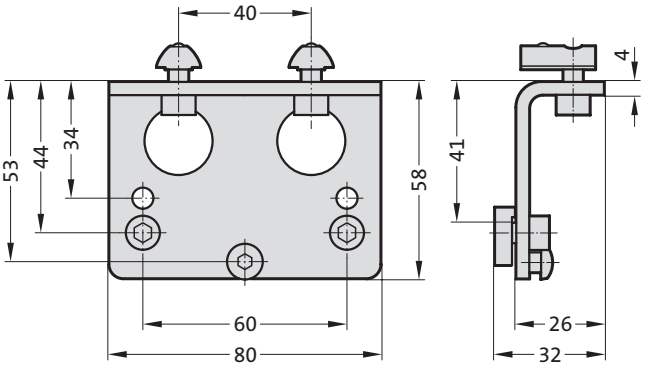
Material:
High-strength steel, black zinc-plated
Weight: 0.4 kg (per pair)

Note:
Included in the scope of delivery are the topmount channel fixings, in pairs, socket head bolts and slot stones.
Construction height above beam: 30 mm

2299.69.10.30 Channel fastening, topmount



2299.69.10.40



Description:
The undermount channel fastening, with its simple clamping principle, allows flexible mounting of the channel (without additional processing) underneath the 2299.69.20.80 profiled beam, as well as mounting of the electric transporter at the same construction height.

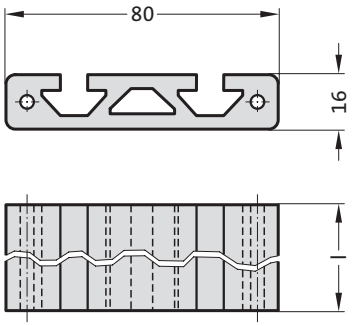
Material:
High-strength steel, black zinc-plated
Weight: 0.6 kg (per pair)

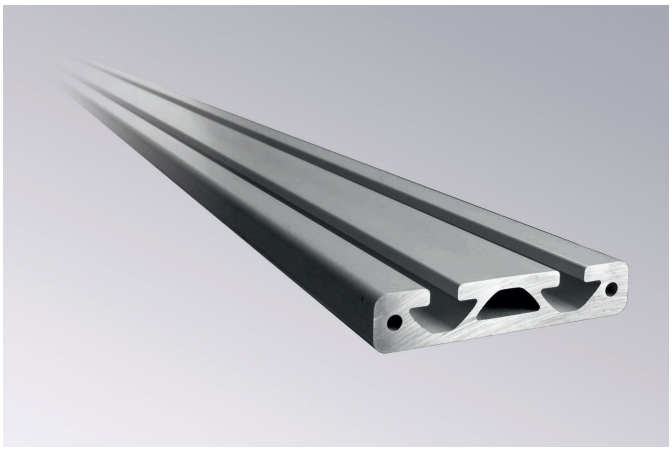
Note:
Included in the scope of delivery are the undermount channel fastenings, in pairs, socket head bolts and slot stones.
Construction height below beam: 58.5 mm

2299.69.10.40 Channel fastening, undermount

ELECTRIC TRANSPORTER - ACCESSORIES
PROFILED BEAM
RETAINER BAR

2299.69.20.80.





2299.69.20.80. **Profiled beam**

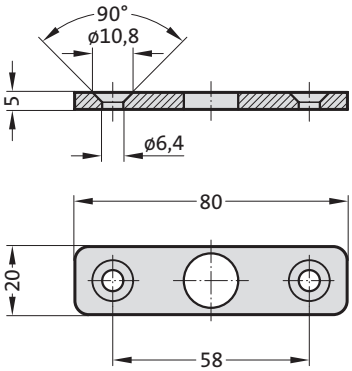
Order No	l [m]
2299.69.20.80.1000	1000
2299.69.20.80.2000	2000

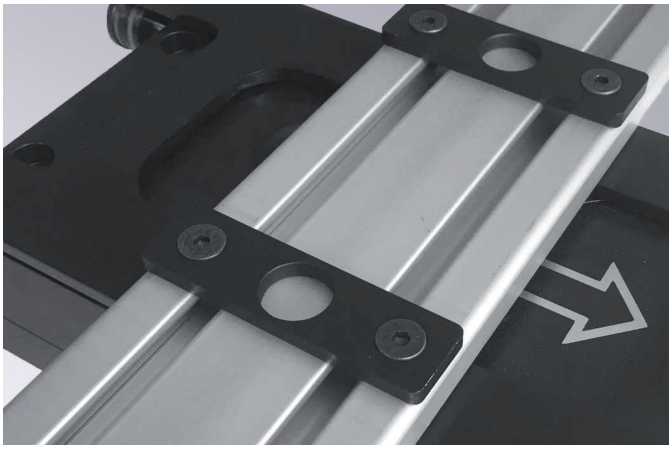
Description:
Flexible set-up of multiple channel sections is possible using the profiled beam.

Material:
Aluminium, anodised (corrosion-resistant)
Weight: 2.2 kg/m

Note:
Only use for transporter,
BLACK LINE 2299.60.12100./14100.
Profiled shape SP3100N profile 8 16 x 80
For fastening the profiled bar onto the electric transporter, the 2299.69.20.02.06 flat head screw (M6x20) or the 2299.69.20.01.06 retainer strip must be ordered separately.

2299.69.20.01.06





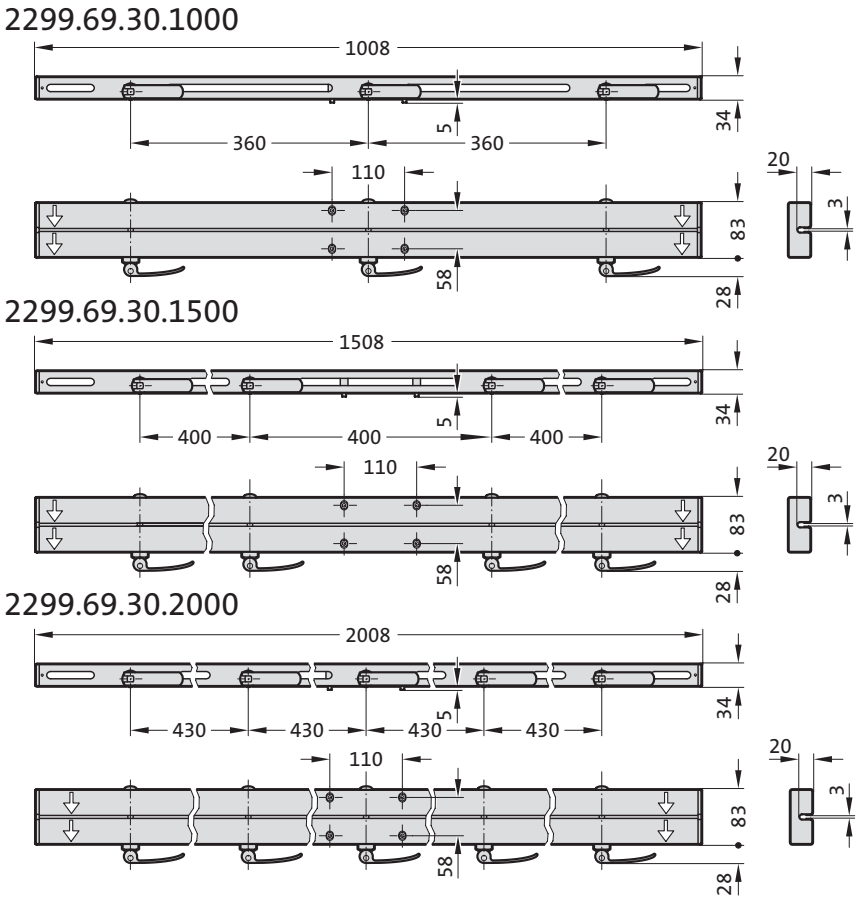
2299.69.20.01.06 **Retainer bar**

Description:
The retainer bar is used to fasten the 2299.69.20.80 profiled bar to the electric transporter.

Material:
High-strength steel, black zinc-plated
Weight: 0.16 kg/per pair

Note:
Included in the scope of delivery are two retainer bars with 4 x flat head screws ISO 10642 - 8.8 M6x20.
Only use for transporter,
Electric BLACK LINE 2299.60.12100. / 14100.

ELECTRIC TRANSPORTER - ACCESSORIES
CLAMPING BAR



Description:
The clamping bar is used for rapid changeover between multiple transport channels.
The mechanical clamping lever securely clamps the channel to the 2299.69.30.00.01.1230 angled profile in the slot without tools.

Material:
High-strength steel (laser-cut),
Black zinc-plated

2299.69.30. Clamping bar

Order No	for electric transporter	Weight [kg]
2299.69.30.1000	2299.60.12100.	2.5

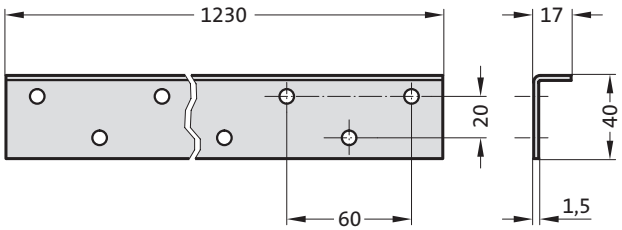
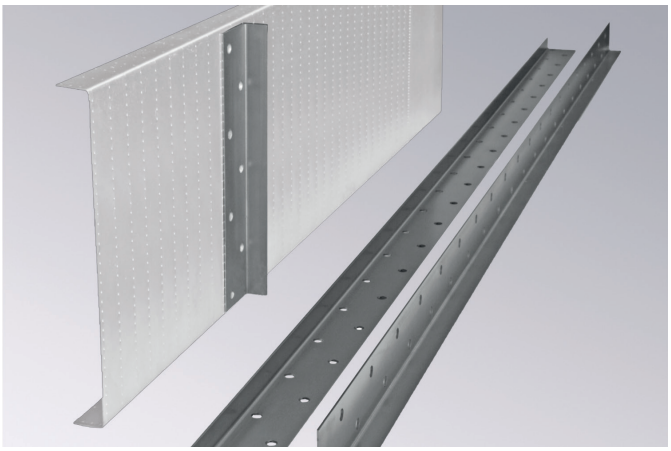
ANGLED SECTION FOR CLAMPING BAR

2299.69.30.00.01.1230





2299.69.30.00.01. Angled section for clamping bar

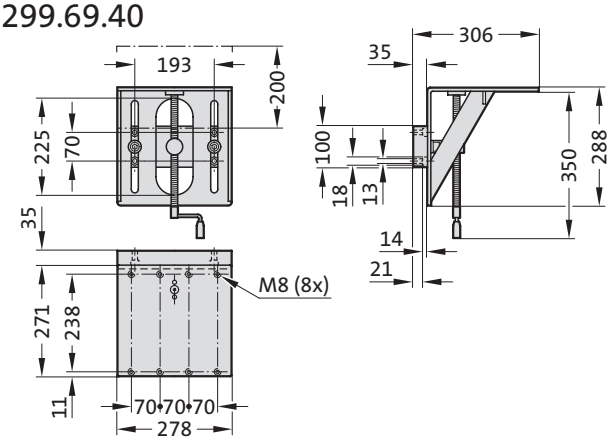
Description:
Angled section for welded connection underneath the channel when using the clamping bar.

Material:
High-strength steel

Note:
Dimensions: 1230 mm x 17 mm x 40 mm
Weight: 0.7 Kg

ELECTRIC TRANSPORTER - ACCESSORIES
HEIGHT-ADJUSTABLE MOUNTING BRACKET
HEIGHT-ADJUSTABLE MOUNTING BRACKET, FOR BEAM MOUNTING

2299.69.40



Description:
The height-adjustable mounting bracket is attached to the power press/ production machine using four bolts. The mounting bracket has three pre-defined mounting options on the top (left, centre and right) for the transporter.

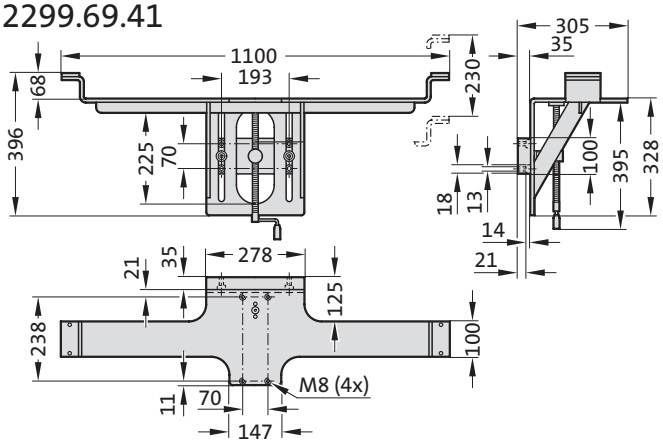
Material:
Steel, black zinc-plated

Note:
Only use for 2299.60.12100.
Electric transporter, BLACK LINE, MAX
Included in the delivery scope: socket head bolts DIN EN ISO 4762
4x M12x50 -12.9.

2299.69.40 Height-adjustable mounting bracket

Max. load	100 kg
Height adjustment of the angled support (with ball bearing-mounted crank)	200 mm
Weight	18,2 kg

2299.69.41



Description:
The height-adjustable mounting bracket is attached to the power press/ production machine using four bolts. The lateral outriggers prevent the profiled beam from bending with a larger span.

Material:
Steel, black zinc-plated

Note:
Only use for 2299.60.12100.
Electric transporter, BLACK LINE, MAX
Replacement slide element: 2299.69.41.00.01
Included in the delivery scope: socket head bolts DIN EN ISO 4762
4x M12x50 -12.9.

2299.69.41 Height-adjustable mounting bracket, for beam mounting

Max. load	100 kg
Max. length of aluminium bar	3000 mm
Max. length of clamping bar	2000 mm
Height adjustment of the angled support (with ball bearing-mounted crank)	230 mm
Weight	28,5 kg

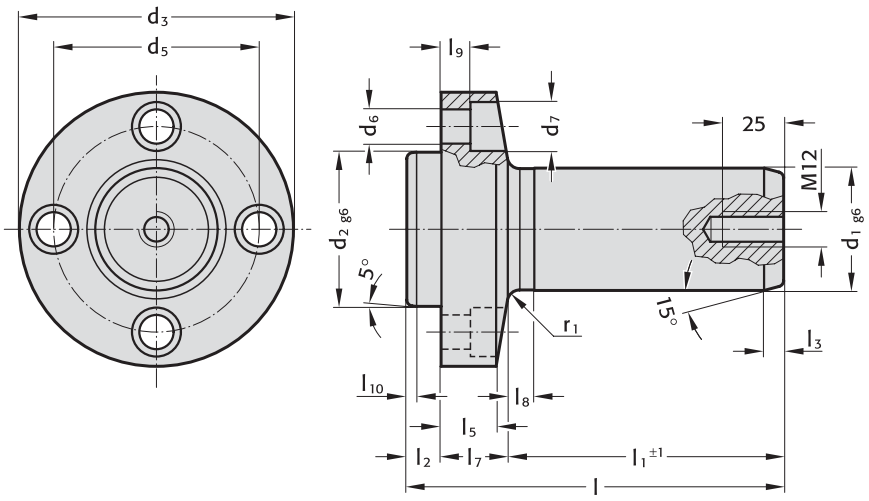
Guide pillar with flange

3111.31.



Material:

Steel, case hardened
Surface hardness: 62 + 2 HRC
Penetration depth: 1,2 mm

Execution:

ground

Note:

Fit for receiving bore H7.
Screws not included.

Fixing:

Use socket cap screws DIN EN ISO 4762
M 8 x 20
M 10 x 25
M 12 x 30
M 14 x 35
M 16 x 40.

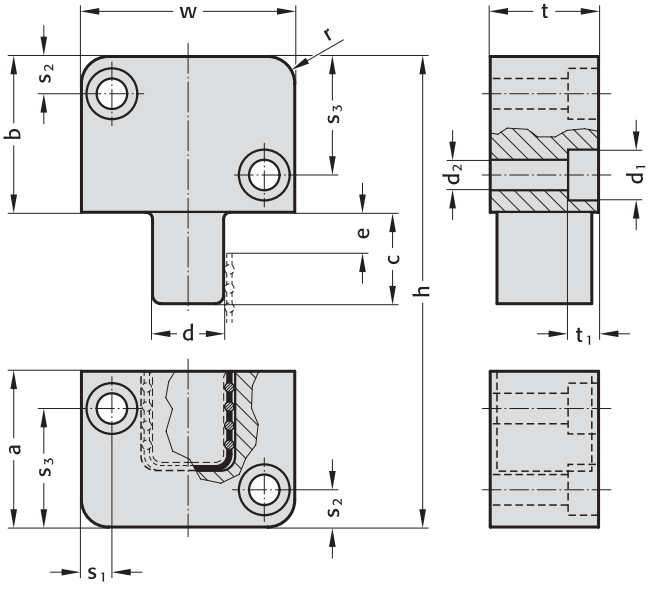
Rectangular guide, Steel with Rollers

3131.80.



Description:

The rectangular guides with rollers guarantee the greatest precisi-onwhen their mould is moved together. The rectangular guides must always be installed in the outer area of the mould plates to ensure problem-free functionality.
Advantages: no play or friction, low maintenance and no lubrication

Material:

Steel
Hardness: 56-58 HRC
Surface: burnished

Note:

The maximum operating temperature is 150°C.

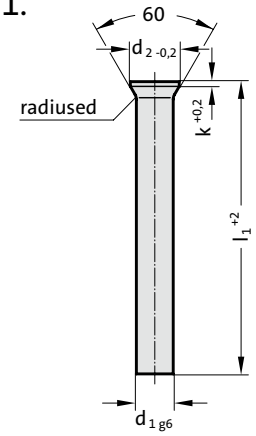
Ejector pin, hardened, DIN 1530-3 Shape D

239.1.



Material:

WS
Order No 239.1.
Hardness:
Shaft 60 ± 2 HRC
Head 45 ± 5 HRC

☞ Description of FIBRO materials for tool and die components see at the beginning of Chapter E.

Execution:

DIN 1530-3 Shape D
Shank hardened and precision ground.
Head hot upset-forged.

239.1. Ejector pin, hardened, DIN 1530-3 Shape D

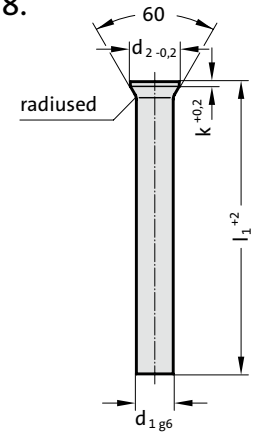
Ejector pin, nitrided, DIN 1530-3 Shape D

239.8.



Material:

NWA
Order No 239.8.
Hardness:
Shaft* ≥ 950 HV 0,3
Head 45 ± 5 HRC
Core strength > 1400 N/mm²

☞ Description of FIBRO materials for tool and die components see at the beginning of Chapter E.

Execution:

DIN 1530-3 Shape D
Shank nitrided and precision ground.
Head hot upset-forged.

Note:

*Owing to thinness of nitrided skin, hardness testing on shank restricted to Vickers only. Test load = 3 N max.

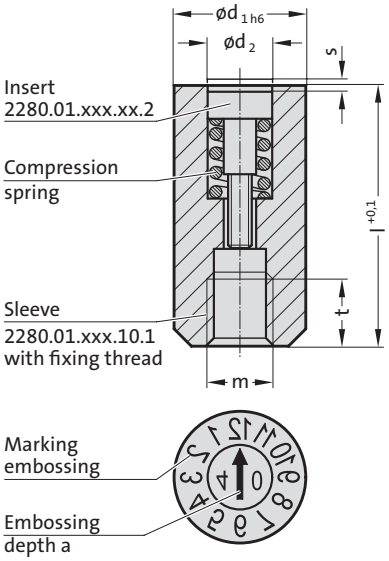
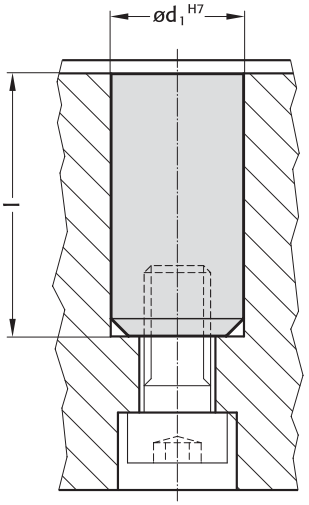
Length l_1	75 mm	=	75
Order No		=	2648. 150.75

Date stamp complete, embossed lettering

2280.01.



Mounting example



Material:

1.2767, hardened HRC 54±2, ground

Note:

The sleeve and insert can be ordered separately (see ordering example).

Description:

- sleeve with engraving
- adjustable insert with display arrow and year (can be rotated using an ordinary screwdriver)
- metric thread for fixing
- mirror image engraving

Mounting:

Fixing:
Screw in the insert in a clockwise direction until it is flush with the top edge and set to the required position.
Setting:
Set the insert by turning clockwise or anti-clockwise. When correctly set, the insert of a stamp with d_1 = 6 mm (.060.) is typically a maximum of 0.1 mm above or below the top edge of the sleeve.
Changing:
To change the insert turn it anti-clockwise to remove.

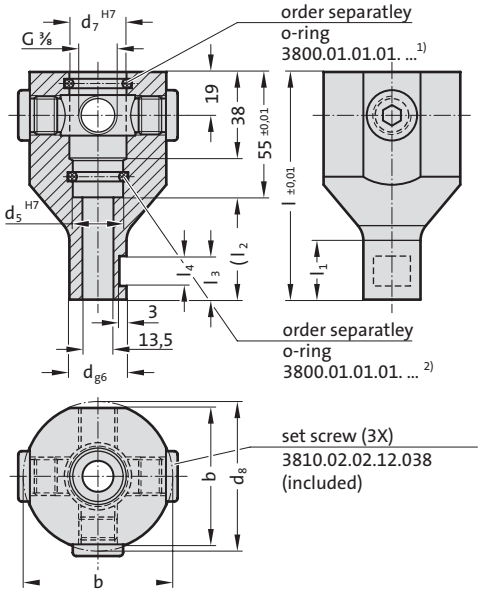
Quill holder for core tempering

3820.10.



Description:

The quill holder is preferably used with bolt guide 2967.10. and quills with internal bore for slider tempering. 4 connections make it possible to implement tempering circuits either directly or in series.

Material:

Stainless steel

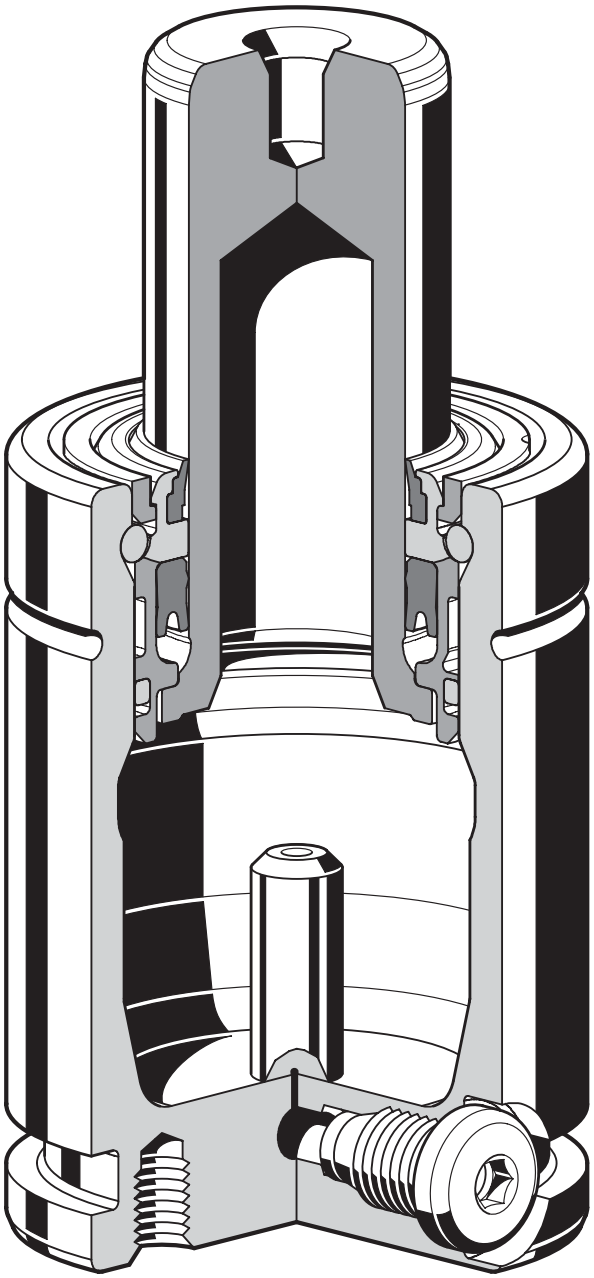
MOULD LINE
Gas springs and Spring plungers for Mould making

FML Gas springs for Mould making



FML Gas springs for Mould Making

FIBRO Mould Line Gas springs (FML)

FIBRO FML Gas springs are an ideal supplement to and expansion of the traditional FIBRO product lines of helical, disc and elastomer springs for manufacturing tools, devices, moulds and machines.

Gas springs can be used for all applications where lift movements are required in parallel to mould opening.

FIBRO Mould Line Gas springs (FML), which were specially developed for mould making, are characterised by their high force, small size, long service life and a constant operating temperature of 120° C.

Of course, FIBRO FML Gas springs are approved as per European Pressure Equipment Directive 2014/68/EU (14th GSGV ordinance on pressure vessels). FIBRO FML Gas springs are filled with nitrogen and do not require any pressure space that is positioned externally or in tool plates. They also require no gas supply lines.

In certain special cases, however, monitoring of charge pressure in the installed state is required. These may be found in the list of accessory products if needed. As long as all mounting details are laid out with due circumspection, it is no problem at all to remove and install FIBRO FML Gas springs.

Operating instructions are included with every delivery of FIBRO FML Gas springs. Application examples are shown on the following pages.

Functioning

The pressure medium is a commercially available, environment-friendly nitrogen. FIBRO FML Gas springs have a standard charge pressure of max. 150 bar.

Pressure Build-Up

In operation the piston rod enters the spring space whose volume is progressively reduced. The resulting pressure rise can be plotted on the Gas spring Diagram as a multiplication factor. The spring force is the product of initial force times that pressure-rise factor and can therefore be calculated easily.

Working temperature

The spring temperature should not exceed +120 °C.

Charge pressure

Modification of charge pressure allows variation of the force rating and can be predetermined from the spring Diagram.

Installation

FIBRO FML Gas springs can be used in any installation position. Whether or not external forces act on them when at rest is of no consequence.and can therefore be calculated easily.

All FIBRO Gas springs meet the requirements of the Pressure Equipment Directive 2014/68/EU .

The Pressure Equipment Directive (2014/68/EU) has been ratified by the european parliament and the council of europe. The requirements of the pressure equipment directive came into force throughout the EC on 29 May 2002.

The directive defines pressure equipment as vessels, pipework, safety devices and pressure accessories. In terms of the directive a vessel is a casing which is designed and manufactured to contain fluids under pressure.

It follows from this definition that nitrogen gas springs of all sizes are deemed to be pressure vessels and must in this respect comply with the pressure equipment directive (2014/68/EU) from 29 May 2002.

FML Gas springs for Mould making

Maintenance

FIBRO FML Gas springs are designed for long-term maintenance-free operation. We recommend lightly oiling the piston rod before using. Sealing and guide elements can be replaced easily in very little time.

They are available in a spare parts kit.

Each spare parts kit comes with detailed instructions for maintenance of Gas springs.

Caution!

Gas springs may only be charged with commercial grade 5.0 nitrogen gas.

Accessories

The range of accessories for gas springs includes fastening devices, charging and control units, screw connections and lines for setting up compound systems.

Advantages of the FIBRO Mould Line series:

- Very little calibration work required in the tool
- No lubrication required
- No maintenance required for up to 1,000,000 strokes[1)]
- Variably adjustable forces
- For mould temperatures of up to 120° C
- Approved as per the european pressure equipment directive 2014/68/EU (14 th GSGV regulation for pressure vessels)
- Standard safety features (FIBRO Safer Choice)[2)]
  Safety piston rod
  Excess pressure protection
  Overstroke protection
- A pressure monitoring system makes it possible to recognise an impending failure at an early point (prevention)
- No tool breakage if the 2nd separation level is locked (the plate comes to a standstill; after the jam is removed, production can be resumed)
- Used worldwide in one million FIBRO Gas springs
- Cost savings: approximately 60-70%
  (e.g. compared to a latch-locking unit)

[1)] At 80°C to 120° C/ 500,000 strokes

[2)] Depending on type of spring

Warning signs

These are available on request. The signs should be affixed near the springs in as prominent a position as possible.

WARNING

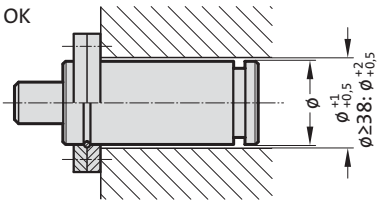
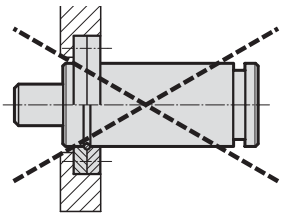
Fastened with 2480.044./045./047.

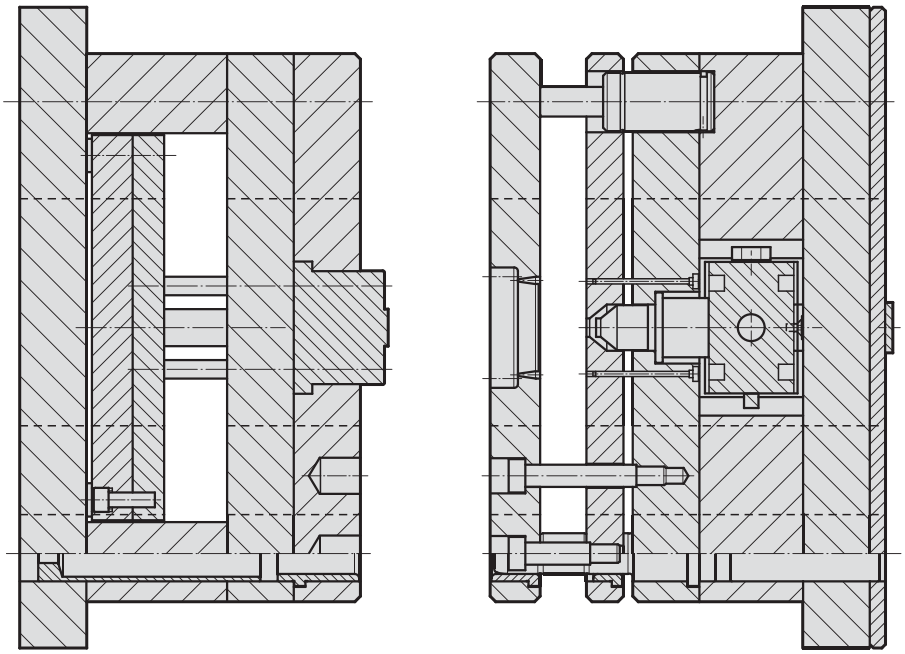
OK





Fastened with 2480.055./057./064.

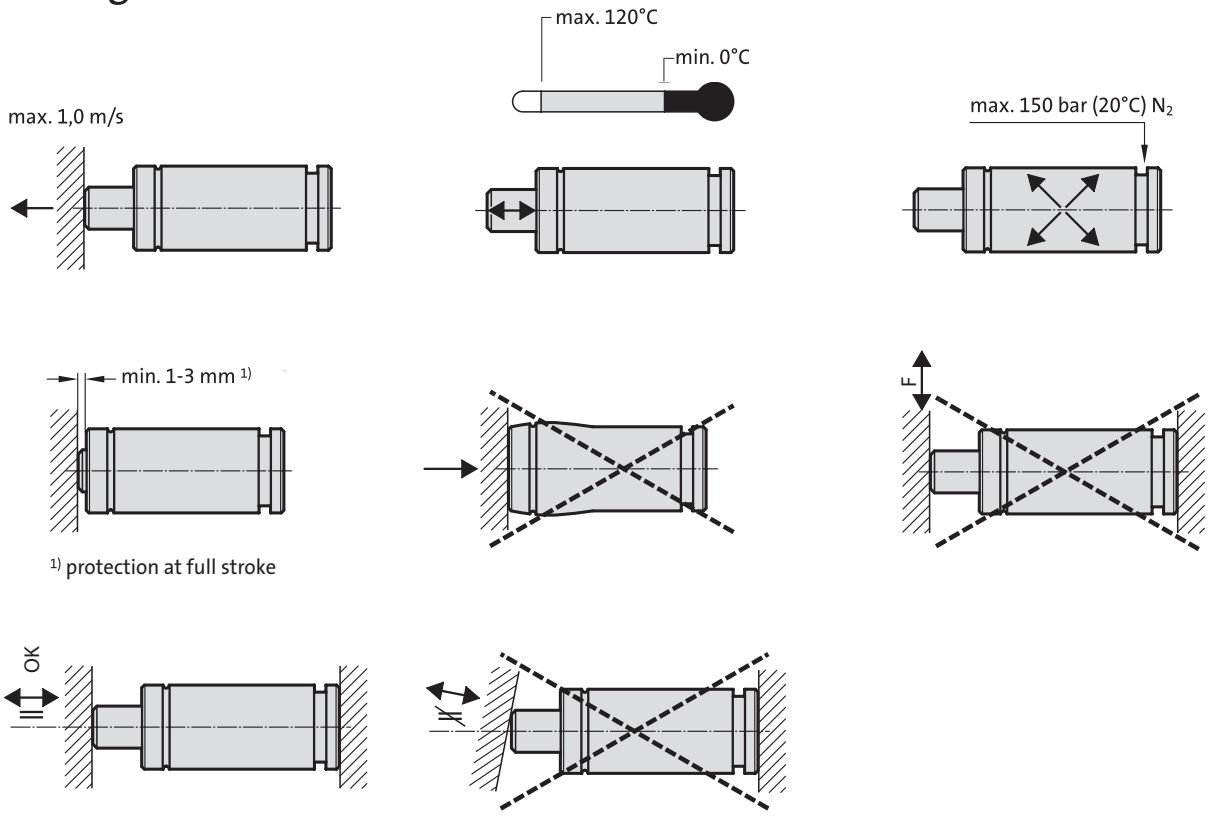
Installation principle:



Mounting directions
FML Gas springs

To achieve the best possible service-life and safety from the gas spring, the directions below must be followed.

Mounting instructions



1) protection at full stroke

- Secure the gas spring to the tool/machine whenever possible, using the threaded hole(s) in the base of the gas spring or a suitable flange. Never exceed the maximum torque values for the threads in the base of the gas spring: (M6 = 10 Nm; M8 = 24 Nm; M10 = 45 Nm; M12 = 80 Nm)
- The threaded hole in the piston rod top should not be used for mounting purposes. It is only to be used when carrying and servicing the gas spring.
- Do not use the gas spring in such a way that the piston rod is realised freely from its compressed position, as this could cause internal damage to the gas spring.
- Make sure the gas spring is mounted parallel to the direction of the compression stroke.
- Ensure the contact surface of the piston rod top is perpendicular to the direction of the compression stroke and is sufficiently hardened.
- The gas spring should not be subjected to the side loads.
- Protect the piston rod against mechanical damage and contact with fluids.
- We do not recommend the last 5 mm or 10% of the nominal stroke be utilised.
- The maximum charging pressure as a function of the working temperature must not be exceeded as it may effect the safety of the product.
- Exceeding the gas spring's recommended operating temperature will shorten the service-life of the gas spring.
- The entire contact surface of the piston rod / piston should be used.

FIBRO-Gas Springs – The Safer Choice
Optimum safety for tools and operators

PDF DOWNLOAD

At FIBRO, safety and reliability are paramount. Particularly when it comes to our gas springs. With their unique range of safety features, FIBRO gas springs are the safest on the market.

FIBRO safety features [1)]

PED approval for 2 million strokes

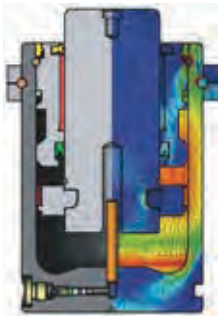
FIBRO gas springs are developed, manufactured and tested for a minimum of 2 million* full strokes in accordance with DGRL 2014/68/EU. The springs deliver this full performance at the maximum permissible limits in terms of filling pressure and operating temperature - even when combined with any of the various mounting types available.

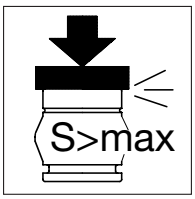
* Calculation value for durability

The benefit for you:

▶ Guaranteed safety and reliability for the entire service life of the spring

Repair kits and qualified training sessions available through FIBRO Service offer increased effectiveness and process reliability.





Overstroke protection

Conventional gas springs can burst in the event of an over-extended stroke. If this happens, parts flying around can become dangerous projectiles.

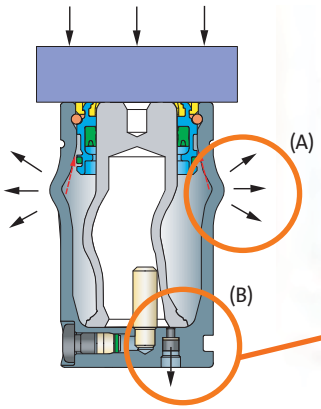
FIBRO gas springs are different:
in the event of an overstroke and depending on the spring type the patented protection system will ensure that either the cylinder wall of the gas spring is deformed in a predefined manner (A) or the piston rod destroys a rupture bolt in the floor of the cylinder (B), thereby allowing the gas to escape into the atmosphere.

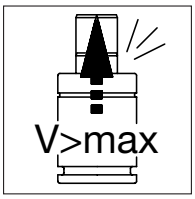
The benefit for you:

▶ No risk of parts flying around in the event of an overstroke

Possible causes of triggering:

Lack of stroke limitations in the tool/machine and placing the piston rods under a load (e.g. sheet-metal holder, slide reset, etc.), double sheet, incorrect installation position, etc.





Return stroke protection

A particularly dangerous situation can arise with conventional gas springs if tool components become jammed and the pressure on the compressed piston rod is then abruptly released: in this case, the piston rod is then fired out of the cylinder like a missile.

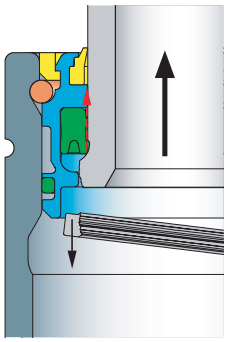
FIBRO gas springs are different:
special guides and a patented safety stop in the piston rods ensure your safety. If the speed is too high during the return stroke, the collar on the piston rod will automatically break. The integrated safety stop then destroys the seal, which allows the gas to escape into the atmosphere and the gas spring to become depressurised.

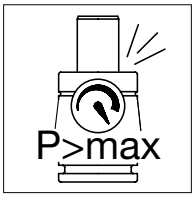
The benefit for you:

▶ No risk of a piston rod firing out if the return stroke is too fast

Possible causes of triggering:

Sudden loosening of jammed components, such as sheet-metal holder, slide, ejector, scraper function, etc.





Overpressure protection

Conventional gas springs can burst if the internal pressure rises above a maximum permitted value. If this happens, parts flying around can become dangerous projectiles.

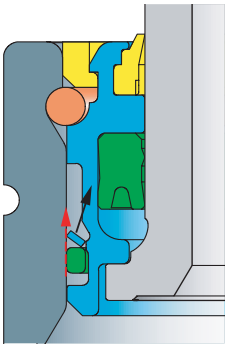
FIBRO gas springs are different:
if the pressure rises above the maximum permitted value, the safety collar on the sealing set is automatically destroyed. The gas then escapes into the atmosphere and the gas spring is depressurised.

The benefit for you:

▶ No risk of bursting parts in the event of overpressure

Possible causes of triggering:

Incorrect filling (max. filling pressure 150 or 180 bar, nitrogen), infeed of liquid operating material, etc.



After a protection function is triggered, the spring cannot be repaired and can no longer be used. It must be replaced completely.

[1)] The safety features mentioned here have been implemented – with few exceptions – on all FIBRO gas springs.
Please refer to the relevant data sheets to check the current safety equipment which is provided with the gas spring you are interested in, or contact FIBRO GmbH directly for more information.

Gas springs – The Safer Choice

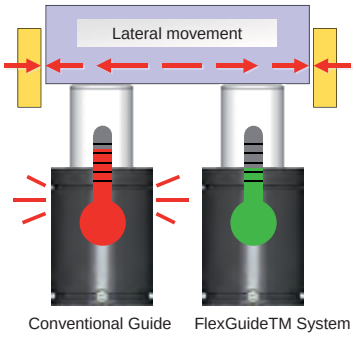
FIBRO

FIBRO reliability features

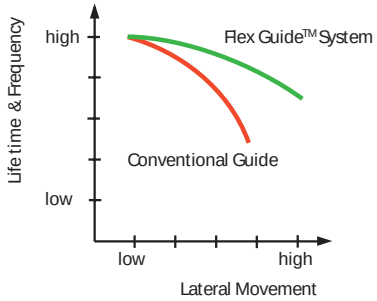
Flexible guides: The Flex Guide™ System

The Flex Guide™ System is a flexible guide in the gas spring which absorbs lateral movements of the piston rod. It minimises friction and lowers the operating temperature.



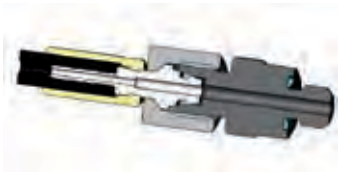
The benefits for you:

- **Extended service life**
- **Increased stroke frequency, i.e. more strokes per minute**



Safe hose connections: The Dual Seal™ System

The FIBRO Dual Seal™ System combines a metal seal with a soft elastomer seal. On hose connection systems, the system provides two leak-tight connections and prevents rotation.

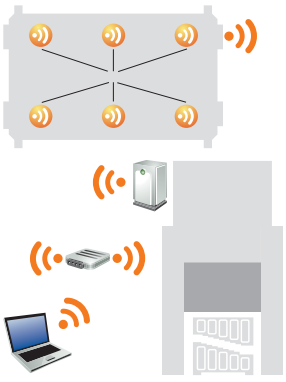


The benefits for you:

- **Leak-tight connection, even under vibrations**
- **High process reliability**
- **Minimised tool down time**
- **Simple installation thanks to anti-rotation function**

Wireless monitoring: The Wireless Pressure Monitoring (WPM) System

The optional Wireless Pressure Monitoring System (WPM) (patent pending) wirelessly monitors the pressure and temperature of FIBRO gas springs. Before a defective part is produced, the press operator receives a message from the WPM and can take appropriate action.



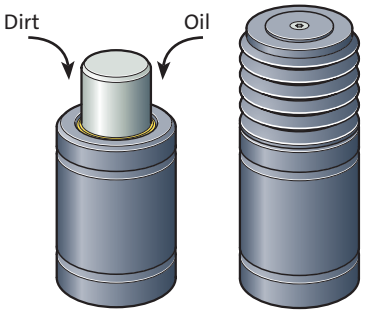
The benefits for you:

- **Preventative quality assurance**
- **High process reliability**
- **Minimised tool down time**
- **Reduced maintenance and costs**

Potential faults are individually displayed. As a result, service intervals can be extended.
Maintenance and repair costs are reduced.

Protected piston rods: FIBRO Concertina Shrouds

The FIBRO Piston Rod Protection (patented) reliably protects the piston rods in gas springs against dirt, oil and emulsion. In this way, the system prevents damage to the piston rod surface and leaks at internal seals.



The benefits for you:

- **Significantly longer service life for gas springs under harsh operating conditions**

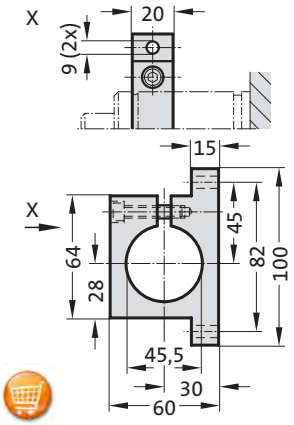
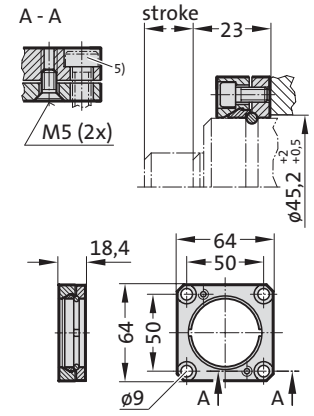
2480.044.00500 [2]



2480.064.00500 [4]



Note:

[2] Attention:
The spring force must be absorbed by the stop surface!

[4] Square collar flange, non-rotating, fixing for composite connection.

[5] Machine screws with hexagonal socket (compact head recommended)

Gas spring MOULD LINE

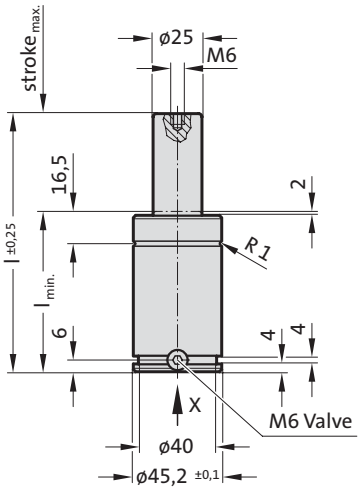
Note:

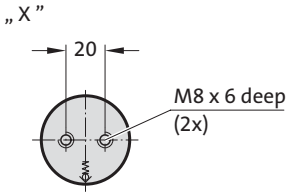
Initial spring force at 150 bar/20°C is 750 daN

Order No. for spare parts kit: 3487.12.00750

Pressure medium: Nitrogen - N_2
Max. filling pressure depends on working temperature:
150 bar (20°C) at 0°C-80°C
125 bar (20°C) at 80°C-100°C
115 bar (20°C) at 100°C-120°C
Min. filling pressure: 25 bar (20°C)
Working temperature: 0°C to +120°C
Temperature related force increase: ± 0.3%/°C
Max. recommended extensions per minute:
20 (at 0°C-80°C)
15 (at 80°C-100°C)
10 (at 100°C-120°C)
Max. piston speed: 1.0 m/s

3487.12.00750.





APPROVED PED 2014/68/EU
